

Ratings

MyFolio Core

MyFolio is a flexible investment solution, offering ranges of multi-asset fund-of-funds that incorporate carefully chosen active and/or passive investment funds. For each range, there are five individual funds that target a different level of risk.

Please note that the number contained in a MyFolio fund name is not related to the synthetic risk and reward indicator contained in the Key Investor Information Document (KIID).

Past performance is not a guide to future returns. The value of this investment and the income from it may go down as well as up and cannot be guaranteed.

An investor may receive back less than their original investment.

For comparison purposes, investors can compare the fund's long term performance to a basket of assets (before charges) with a risk profile at the lower range of the Risk Target for the relevant fund, which the ACD considers appropriate given the investment policy and Risk Target of the relevant fund.

Market Review

Global equities posted positive returns in sterling terms in the third quarter of 2025 and rose by more than they did in US dollar terms as the US currency strengthened. Strong corporate earnings and the US Federal Reserve (Fed)’s first interest-rate cut of the year underpinned sentiment, while softer US labour data and easing inflation reinforced expectations of further monetary easing. A cautiously dovish message from Fed Chair Jerome Powell reinforced this view. Hopes for broader trade agreements, including a 90-day US–China tariff truce extension to 10 November, also supported confidence. However, renewed geopolitical tensions, weaker Chinese economic data and the partial US government shutdown late in the quarter dampened the outlook.

In fixed income markets, global government bond prices rose moderately in sterling terms over the quarter. As price pressures continued to ease in most major economies, investors looked ahead to further potential rate cuts. However, against a backdrop of President Trump’s tariff announcements, central banks maintained a cautious, data-dependent stance. The yields on 10-year government bonds in the UK, Germany, Japan and China all rose over the quarter. The increase reflected fiscal concerns and higher bond supply in the UK and Germany, expectations of policy normalisation in Japan and increased local government borrowing in China. By contrast, yields in the US ended lower due to expectations of monetary easing and increased safe-haven demand amid heightened geopolitical tensions. During the quarter, the Fed reduced the target range for the federal funds rate by 25 basis points (bps) to 4.00%–4.25%, as it continued with its data-dependent stance, while signalling a further 50 bps of cuts in 2025. Meanwhile, the Bank of England reduced the Bank Rate by 25 bps to 4.00% in August, but the European Central Bank maintained its deposit facility rate at 2.00% over the quarter. The Bank of Japan kept its key short-term interest rate at 0.50% over the period. It also announced it would gradually sell its holdings of exchange-traded funds and real estate investment trusts as part of its policy normalisation, though its approach remains cautious by global standards.

Turning to the UK commercial real estate sector, the MSCI UK Monthly Index reported a return of 1.7% over the three months ending in August, with residential properties experiencing the highest returns at 2.1%. The office sector was the worst-performing sector in the index. However, it still produced a positive return of 0.9%.

Range commentary

The fundamental focus of the Strategic Asset Allocation (SAA) for MyFolio is to continually enhance diversification across asset classes and maximise the potential return for each level of risk. We do this in a way that is consistent with our long-term expected returns.

Any enhancements made to the SAA must be compared with the alternative of making no change at all. Turnover must be considered carefully, and there must be a clear potential benefit from any changes we plan to make. Historically, we have made, on average, about one change every 12 months, but the frequency has increased more recently given the rapidly changing market dynamics. Despite this, there were no changes to the SAA over the second quarter of 2025.

In terms of the underlying funds, there were no significant trades over the last three months.

Following shareholder approval on 23 May 2025, the MyFolio Market range merged into the MyFolio Index range, effective 11 July 2025.

Market Outlook

Global equities ended September higher, supported by strong corporate earnings and the US Federal Reserve (Fed)’s widely anticipated 25 basis-point rate cut. Softer US labour market data and easing inflation have strengthened conviction that the Fed could continue to ease policy in the coming months, lifting risk appetite. However, geopolitical tensions surrounding the Russia–Ukraine war have persisted. Also, weaker economic data from China has continued to cloud the global growth outlook, and a partial shutdown of the US government at month end, the first in nearly seven years after lawmakers failed to reach a funding deal, has added to near-term uncertainty.

In Europe, Germany’s recent announcement of sizeable planned fiscal stimulus should support growth both domestically and across the wider eurozone. The European Central Bank left interest rates unchanged at its September meeting, saying risks had become more balanced thanks to resilient growth and inflation easing towards its 2% target.

In the UK, the Bank of England (BoE) expects inflation to pick up temporarily in 2025 before returning to its 2% target. The BoE kept rates at 4.00% in September, but investors are expecting a further rate cut by the end of the year amid concerns about the domestic economy.

Investor sentiment in UK real estate remains subdued, with transaction volumes down around 20% year on year. The retail and industrial sectors continue to lead performance, while fiscal uncertainty and geopolitical tensions weigh on activity. International investors remain engaged, though capital flows are muted, reflecting the fragile underlying environment.

*The Ongoing Charge Figure (OCF) shows the annualised operating expenses of the share/unit class as a percentage of the average net asset value of the class over the same period. It is made up of the Annual Management Charge (AMC) and other expenses taken from the class over the last annual reporting period, such as depositary fees, audit fees, investment management fees, and administration fees. It excludes portfolio transaction costs, except in the case of an entry/exit charge paid by the Fund when buying or selling in another collective investment undertaking. The OCF can help you compare the costs and expenses of different Funds/classes.

¹The Historic Yield as at 31/08/2025 reflects distributions declared over the past twelve months as a percentage of the mid-market share price, as at the date shown. It does not include any preliminary charge and investors may be subject to tax on their distributions.
