# abrdn Evolve American Equity Index Fund

# SDR Consumer Facing Disclosure

13 January 2025

#### Sustainability Disclosure Requirements (SDR) and labelling regime

Sustainable investment labels help investors find products that have a specific sustainability goal. The fund does not have a sustainable investment label under the SDR. This is because the fund has a financial objective to track the return of an Index, which is a subset of securities within the parent Index. While the fund has material sustainability characteristics, it does not have a sustainability objective.

#### Information

Manager	abrdn Fund Managers Limited

Legal entity identifier	213800SZF988RLNT5W22

## **Fund objective**

To generate growth over the long term (5 years or more) by tracking the return of the MSCI USA Select ESG Climate Solutions Target Index (the "Index").

## Sustainability approach

#### Benchmark index and sustainable approach

The Index aims to reflect the performance characteristics of a subset of equity securities within the MSCI USA Index (the "Parent Index"). The Index incorporates material sustainability characteristics through a combination of targets relative to the Parent Index by applying higher weights to constituent companies with stronger environmental, social and governance ("ESG") scores, lower carbon footprints and a higher exposure to revenues from clean technology solutions such as alternative energy, energy efficiency, green building, pollution prevention, sustainable

water and sustainable agriculture ("Clean Technology Solutions"). As such the aggregate MSCI ESG score, carbon footprint, and exposure to revenues from Clean Technology Solutions of the Index evolves with that of the Parent Index. Further, sustainability characteristics are targeted at aggregate fund level, meaning these characteristics may not be achieved or displayed by each individual company in the Index, including companies that do not have any sustainability characteristics

#### Sustainability characteristics

The Index will tilt constituent company weights to:

- target an increase in the weighted average MSCI ESG score (0 (worst) to 10 (best)) of the Index by 20% relative to the Parent Index (as measured by MSCI). The MSCI ESG Score provides an opinion of companies' management of financially relevant ESG risks and opportunities. Each rating takes into consideration the company's exposure to potentially material ESG risks, the quality of management systems and governance structures to mitigate potential ESG risks, and where applicable, positioning to meet market demand for the provision of products and services that have a positive environmental or social contribution;
- 2. target a reduction in the carbon intensity of the Index by 50% relative to the Parent Index (as measured by MSCI). The carbon intensity is measured using scope 1 & 2 carbon emission divided by total sales. Scope 1 carbon emissions are greenhouse gas emissions generated from sources which are owned or controlled by the company. Scope 2 carbon emission are greenhouse gas emissions generated from the consumption of purchased electricity, heat or steam by the
- company. Further, this reduction is also targeted on potential carbon emissions which specifically monitors energy related fossil fuel reserves data. For the avoidance of doubt, no target is set on Scope 3 carbon emissions which relates to indirect emissions, such as from a company's supply chain or from the use of a company's end products. This is due to challenges around relatively low levels of corporate disclosures in these areas and inconsistent estimation methods: and
- 3. target an increase in weighted averaged percent of revenue from Clean Technology Solutions by 50% relative to the Parent Index (as measured by MSCI). Clean Technology Solutions are considered a core part of the long-term solution for the global ambitions to transition to a lower carbon environment and as such revenues generated will evolve with the growth in this area of the market.

All the above Index criteria are subject to risk diversification constraints, for example, minimum and maximum constituent, sector and country weights relative to the Parent Index and aim to minimise the variation in performance relative to the Parent Index.

#### Negative screening criteria

which are related to controversial weapons, thermal coal, tobacco, and very severe controversies. Please refer to the prospectus for full details on the screening criteria applied for this fund.

#### Disinvestment approach

I he index alignment to the stated outcomes and the negative screening criteria is completed on a quarterly basis. As a result, disinvestment from the non-compliant securities will also happen at this point and generally never longer than 3 months, allowing for market conditions.

### Sustainability metrics

The sustainability characteristics of the Index are achieved through the combination of the three ESG targets set relative to the Parent Index. The Index rebalances on a quarterly basis to align to these targets. The below charts represent the comparative profiles of the Parent Index and the Index for each of these three targets.

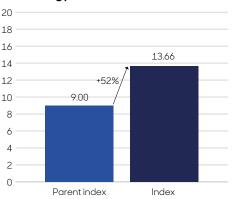

#### MSCI ESG score\*

# Carbon intensity (t CO<sub>2</sub>e/\$M Sales\*\*)

# % Revenue from clean technology solutions\*
