Incorporation

abrdn SICAV I (the "Company") was incorporated as a société anonyme, qualifying as a société d'investissement à capital variable on 25 February 1988 for an unlimited period and commenced operations on 26 April 1988. It is registered under number B27471 at the Register of Commerce and Companies of Luxembourg where its Articles of Incorporation are available for inspection and where copies thereof may be obtained. The Articles of Incorporation were also published in the RESA and were last amended on 6 February 2019.

As at 30 September 2025, the Company has issued shares in the following Funds:

abrdn – CCBI Belt & Road Bond Fund	Euro High Yield Bond Fund
All China Sustainable Equity Fund	Europe ex UK Sustainable Equity Fund
Asia Pacific Dynamic Dividend Fund	European Sustainable Equity Fund
Asia Pacific Sustainable Equity Fund	Frontier Markets Bond Fund
Asian Bond Fund	Future Minerals Fund
Asian Credit Opportunities Fund	GDP Weighted Global Government Bond Fund
Asian SDG Equity Fund	Global Bond Fund
Asian Smaller Companies Fund	Global Corporate Sustainable Bond Fund
China A Share Sustainable Equity Fund	Global Dynamic Dividend Fund
China Next Generation Fund	Global Government Bond Fund
China Onshore Bond Fund	Global High Yield Sustainable Bond Fund
Climate Transition Bond Fund	Global Infrastructure Equity Fund
Diversified Growth Fund	Global Innovation Equity Fund
Diversified Income Fund	Global Mid-Cap Equity Fund
Emerging Markets Bond Fund	Global Small & Mid-Cap SDG Horizons Equity Fund
Emerging Markets Corporate Bond Fund	Global Sustainable Equity Fund
Emerging Markets Equity Fund	Indian Bond Fund
Emerging Markets ex China Equity Fund	Indian Equity Fund
Emerging Markets Income Equity Fund	Japanese Smaller Companies Sustainable Equity Fund
Emerging Markets SDG Corporate Bond Fund	Japanese Sustainable Equity Fund
Emerging Markets SDG Equity Fund	North American Smaller Companies Fund
Emerging Markets Smaller Companies Fund	Select Emerging Markets Investment Grade Bond Fund
Emerging Markets Total Return Bond Fund	Short Dated Enhanced Income Fund
Euro Government Bond Fund	US Dollar Credit Sustainable Bond Fund

The full name of each Fund is constituted by the name of the Company, abrdn SICAV I, followed by a hyphen and then the specific name of the Fund. Throughout the Financial Statements, the Funds are referred to by their short names as indicated above.

No subscriptions can be received on the basis of this document. Subscriptions are only valid if made on the basis of the current prospectus or on the Key Information Document, accompanied by a copy of the latest annual report or of the subsequent semi-annual report if it has been published.

Please see the Notes to the Financial Statements for changes during the year.

Statement of Changes in Portfolio

A statement giving the changes in the Schedule of Investments for the year ended 30 September 2025 can be obtained free of charge from the registered office of the Company.

Report of the Board of Directors

As at 30 September 2025, the total net assets of abrdn SICAV I (the "Company") stood at USD 14,810,142,000.

The Company aims to provide investors with a broad international range of diversified actively-managed Funds which, through their specific investment objectives and individual portfolios, offer investors the opportunity to conveniently build a diversified global stock and bond portfolio to meet individuals' investment goals.

The overall strategy of the Company and the separate Funds is to seek diversification through investment primarily in transferable securities.

The Board of Directors adheres to the Association of the Luxembourg Fund Industry ("ALFI") code of conduct for Luxembourg investment funds (revised June 2022). The code of conduct sets a framework of high-level principles and best practice recommendations for the governance of Luxembourg investment funds.

The Board of Directors considers that it has been in compliance with the Principles of the Code in all material respects for the year ended 30 September 2025.

The Board of Directors

Luxembourg, 9 December 2025

Report of the réviseur d'entreprises agréé

To the Shareholders of
abrdn SICAV I
35a, avenue John F. Kennedy
L-1855 Luxembourg

Opinion

We have audited the financial statements of abrdn SICAV I and of each of its sub-funds ("the Fund"), which comprise the Statement of Net Assets and the Schedule of Investments as at 30 September 2025 and the Statement of Operations and Changes in Net Assets for the year then ended, and notes to the financial statements, including a summary of significant accounting policies.

In our opinion, the accompanying financial statements give a true and fair view of the financial position of abrdn SICAV I and of each of its sub-funds as at 30 September 2025, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession ("Law of 23 July 2016") and with International Standards on Auditing ("ISAs") as adopted for Luxembourg by the Commission de Surveillance du Secteur Financier ("CSSF"). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the « Responsibilities of "réviseur d'entreprises agréé" for the audit of the Financial Statements » section of our report. We are also independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants ("IESBA Code") as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements, and have fulfilled our other ethical responsibilities under those ethical requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our report of the "réviseur d'entreprises agréé" thereon. Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report this fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund for the financial statements

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund's and each of its sub-funds' ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund either intends to liquidate the Fund or any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the "réviseur d'entreprises agréé" for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue a report of the "réviseur d'entreprises agréé" that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

Report of the réviseur d'entreprises agréé (continued)

Responsibilities of the "réviseur d'entreprises agréé" for the audit of the financial statements (continued)

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund.
- Conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our report of the "réviseur d'entreprises agréé" to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our report of the "réviseur d'entreprises agréé". However, future events or conditions may cause the Fund or any of its sub-funds (except for the sub-funds where a decision or an intention to close exists) to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Global Overview

Global equities

Global stock markets rose strongly over the 12-month period. Equities weakened in October amid geopolitical tensions and mixed earnings. Donald Trump's November election win, with his pro-growth agenda, initially boosted equities. However, his planned measures raised concerns over inflation, contributing to weaker equity performance later in 2024. Equities saw a recovery in January 2025 on hopes of a soft landing and continued disinflation. Although concerns about the economic effects of tariffs weighed on equities from February onwards, leading to a notable sell-off in April, this was followed by a marked rebound towards the end of the period as many tariffs were either reduced or paused. However, the partial shutdown of the US government in September after a failure to secure a funding deal added to economic and political uncertainty. With inflation continuing to ease but remaining above target, central banks maintained a data-dependent stance. Global economic growth held up better than expected, with early-2025 fears of a US recession proving to be short-lived.

UK

The UK stock market, as represented by the FTSE All-Share Index, recorded a gain over the 12-month period. The FTSE 100 Index, home to multinational companies, outperformed the FTSE 250 Index, which contains smaller companies typically more focused on the domestic UK economy. The FTSE 100 performed broadly in line with global equities, supported by strength in its energy and mining constituents as commodity prices rose over the period, despite its defensive tilt and relatively low exposure to the buoyant technology sector. Meanwhile, smaller UK companies underperformed their larger peers amid continued uncertainty over the domestic economic outlook. In October, the new Labour government's first Budget featured approximately £40 billion in tax increases aimed at strengthening fiscal stability, along with a commitment to increased borrowing intended to stimulate growth. Chancellor Rachel Reeves then announced £14 billion of fiscal tightening measures in March's Spring Statement aimed at improving the UK's public finances. In May, the UK and EU announced a reset in post-Brexit relations to strengthen trade ties and foster a more pragmatic partnership. The June 2025 Spending Review increased funding for infrastructure, digital public services and affordable housing. UK equities performed well in July, August and September, supported by a resilient global growth backdrop and easing trade tensions, which lifted sentiment across export-oriented sectors. The Bank of England (BoE) cut its Bank Rate by 25 bps in November, February, May and August, bringing it to 4.00%. The headline rate of UK annual consumer inflation remained at 3.8% in August, in line with expectations but still above the BoE's 2% target.

US

US share prices, as measured by the broad S&P 500 Index, rose over the 12-month period.

After a sustained fall in annual inflation and a softening US labour market, the US Federal Reserve (Fed) lowered the target range for the federal funds rate by 25 bps in November, December and September, taking it to 4.00%-4.25%. Nevertheless, with the economy remaining relatively robust, it maintained a data-dependent policy stance. US equities moved higher in November, supported by Donald Trump's election victory and anticipation of his pro-growth agenda. Nevertheless, concerns about interest rates staying higher for longer weighed on equities in December, before strong corporate earnings led to a rebound in January. Equities weakened in February and particularly March as investors grew increasingly concerned about the economic impact of President Trump's tariff policies. Markets again sold off in April after the announcement of sweeping new tariffs. However, equities rebounded later in the month after the US announced a 90-day pause on most of the tariffs, excluding those on China. Markets performed strongly in May, driven by the US reducing tariffs on Chinese goods from 145% to 30% and China cutting retaliatory duties on US imports from 125% to 10% for 90 days. In June, US equities again performed well, supported by easing tariff fears and a US-brokered ceasefire between Israel and Iran. US equities rose in July, August and September, driven by robust corporate earnings, easing trade tensions, the approval of President Trump's tax and spending bill, and growing expectations of Fed rate cuts. However, the period ended with a partial US government shutdown after lawmakers failed to reach a funding agreement.

Europe

Continental Europe's stock markets, as measured by the FTSE World Europe ex UK Index, rose over the 12-month period. European equities fell in October due to rising bond yields and weak US technology sector earnings. In December, German Chancellor Olaf Scholz lost a no-confidence vote after the collapse of his coalition government. Meanwhile, the French government also collapsed after Prime Minister Michel Barnier resigned following a no-confidence vote on his budget proposal. President Emmanuel Macron appointed veteran politician and centrist ally François Bayrou as Barnier's successor. At February's German federal election, the centre-right CDU/CSU conservative alliance emerged as the largest force and began coalition talks to form a government. In March, German Chancellor-designate Friedrich Merz announced plans to significantly increase defence spending and launch a €500 billion infrastructure fund. However, concerns about the effects of US tariffs weighed on European equities in March and April. European equities performed well in May after a marked de-escalation in US-China trade tensions but saw a slight pullback in June amid renewed caution over EU-US trade negotiations. In the same month, NATO leaders also agreed to raise defence spending to 5% of GDP by 2035, more than double the previous target. At the end of July, the US set tariffs on most EU goods at 15%, avoiding the previously threatened 30% rate. In August, French Prime Minister François Bayrou called an 8 September confidence

Global Overview (continued)

vote on his austerity programme. After losing the vote, he resigned, prompting President Emmanuel Macron to appoint Sébastien Lecornu as prime minister in a bid to stabilise his government. Encouraged by signs of disinflation, the European Central Bank (ECB) cut its deposit facility rate by 25 bps in October, December, January, March, April and June, bringing it to 2.00% by the end of the period.

Asia Pacific

Stock markets in the Asia Pacific (excluding Japan) region rose over the 12-month period. Investor sentiment was supported by signs that high annual inflation globally was beginning to subside, leading investors to factor in future interest-rate cuts from major central banks. However, concerns about a possible global trade war led to significant volatility during the period. Chinese equities recorded inconsistent gains at the start of the period, supported at times by policy-easing signals and renewed economic optimism. However, sentiment remained fragile as property-sector strains and rising US-China trade tensions fuelled volatility. In April, US President Donald Trump announced sweeping tariffs on a wide range of countries, with the highest rates aimed at China. The following month, these were reduced for 90 days, with US tariffs on Chinese goods cut from 145% to 30% and Chinese tariffs on US goods lowered from 125% to 10%. In June, discussions in London reaffirmed the Geneva trade agreement reached in May, while late-July talks in Stockholm ended with an agreement in principle to extend the tariff truce. This was confirmed in August when the US-China tariff truce was extended by 90 days to 10 November. Meanwhile, the Taiwanese stock market performed well over the period, supported by its significant weighting in the technology sector, which benefited from strong demand despite tariff concerns. In contrast, Indian equities lagged as foreign investor optimism faded, with US tariffs on India's Russian oil imports weighing heavily, while limited exposure to global trade tensions offered little protection.

The Japanese stock market, as measured by the TOPIX Index, rose over the 12-month period. This reflected solid company results and an increased focus by Japanese companies on shareholder returns. Shigeru Ishiba succeeded Fumio Kishida as prime minister in October, a change that led to heightened political uncertainty and yen weakness, with Japan's ruling coalition losing its parliamentary majority in a snap election. With annual core inflation still above the 2% target, the Bank of Japan (BoJ) hiked its key short-term interest rate by another 25 bps at its January meeting, bringing it to 0.50%, which supported the yen. In June, the BoJ confirmed it would continue reducing monthly bond purchases by ¥400 billion per quarter through March 2026 as it phases out its ultra-loose policy, then slow the pace to ¥200 billion to reflect caution about the economic outlook. The Japanese economy grew by a higher-than-expected 0.5% sequentially in the second quarter of 2025, after expanding by just 0.1% in the previous three months. Japan's ruling Liberal Democratic Party (LDP), led by Prime Minister Shigeru Ishiba, lost its majority in the Upper House elections in July, deepening political uncertainty. Despite this setback, Ishiba pledged to remain in office and lead a minority government, but he was ultimately forced to resign in September. The LDP is set to choose his successor in early October. Meanwhile, the BoJ announced plans in September for gradual asset sales as part of its policy normalisation, although its approach remained cautious by global standards. Easing US-China tensions and lower-than-expected US tariffs supported stronger performance in Japanese equities towards the end of the period.

Emerging markets

Emerging-market equities rose over the 12-month review period, keeping pace with developed markets despite heightened volatility. Investors were rattled by fears of a global trade war after US President Donald Trump unveiled hefty levies on multiple countries on "Liberation Day" in April 2025. His subsequent U-turns helped US markets recover despite new tariff announcements. The US has since secured some nominal trade deals and looks set to continue to use tariffs. The resulting US dollar weakness, exacerbated by concerns over US fiscal discipline, supported emerging-market performance. Meanwhile, tariff winners and losers saw their fortunes shift over the year. Brazil and India, initially seen as relatively insulated, were later hurt by new levies, while Mexico benefited from key exemptions and has emerged as a relative winner. US monetary policy also shaped sentiment, as the Fed paused its rate-cutting cycle in January 2025 after three consecutive reductions, citing economic uncertainty. A long-awaited rate cut in September provided a helpful tailwind to equities. Elsewhere, the emergence of Chinese artificial intelligence start-up DeepSeek and elevated geopolitical risks, including tensions in Asia and the Middle East, also unsettled investors.

Bond markets

Global government bonds had a mostly positive performance over the 12-month period. After years of record-low interest rates, many central banks had earlier raised rates sharply in an effort to contain inflation, a policy that has since proven successful. As a result, the Fed, ECB and BoE continued to ease their respective monetary policies during the period, with investors looking ahead to further potential rate cuts later in 2025. That said, most major central banks remain data-dependent for now, as they remain wary of lingering inflationary pressures.

Corporate bond prices also performed solidly over the 12-month period, with both investment-grade and riskier high-yield bonds faring well due to the former's higher interest-rate sensitivity (as central banks continued to ease monetary policy) and the latter's exposure to a more robust economic environment than feared, which supported credit fundamentals. Also, income-oriented investors were drawn to corporate bonds because of their historically attractive yields.

Global Overview (continued)

Outlook

Global equities ended the period on an upbeat note, supported by strong corporate earnings and the Fed's widely anticipated 25 basis-point rate cut. Softer US labour market data and easing inflation have strengthened conviction that the Fed could continue to ease policy in the coming months, lifting risk appetite. However, geopolitical tensions surrounding the Russia-Ukraine war have persisted. Also, weaker economic data from China has continued to cloud the global growth outlook, and a partial shutdown of the US government at month end, the first in nearly seven years after lawmakers failed to reach a funding deal, has added to near-term uncertainty.

In Europe, Germany's recent announcement of sizeable planned fiscal stimulus should support growth both domestically and across the wider eurozone. The ECB left interest rates unchanged at its September meeting, saying risks had become more balanced thanks to resilient growth and inflation easing towards its 2% target.

In the UK, the BoE expects inflation to pick up temporarily in 2025 before returning to its 2% target. The BoE kept rates at 4.00% in September, but investors are expecting a further rate cut by the end of the year amid concerns about the domestic economy.

Fund returns: Source: Factset, Basis: performance is calculated over the stated period on the share price performance basis, based on the noted share class, net of annual charges and inclusive of reinvested income. Exceptions being the Global Bond Fund which is based gross of fees.

Benchmark returns: Source: Individually disclosed, Basis: The benchmark returns are quoted gross and contain no adjustment for fees.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

The performance data does not take account of the commissions and costs incurred on the subscription and redemption of shares.

Performance is calculated at each period end unless otherwise stated.

[†] Source: Aberdeen Group plc (previously known as: abrdn plc).

The other operating charges figure (OOC) is the total expenses paid by each share class, against its average net asset value. This includes the annual management charge, the other operating expenses and any synthetic element to incorporate the ongoing charges of any underlying qualifying investments. The OOC can fluctuate as underlying costs change. Where underlying costs have changed, the OOC disclosed in the Key Information Document will be updated to reflect current changes.

[‡] Subscriptions and redemptions for this share class were in USD.

^Δ Subscriptions and redemptions for this share class are in EUR.

* A perpetual bond is a bond with no maturity date. Perpetual bonds are not redeemable but pay a steady stream of interest.

† Managed by subsidiaries of Aberdeen Group plc (previously known as: abrdn plc).

Currently forward positions are not collateralised.

The accompanying notes form an integral part of these financial statements.

Notes to the Financial Statements

1. Presentation

a) Organisation

abrdn SICAV I (the "Company") was incorporated under the laws of the Grand Duchy of Luxembourg on 25 February 1988, as a société anonyme and qualifies as an open-ended société d'investissement à capital variable (a "SICAV") with UCITS status (an Undertaking for Collective Investment in Transferable Securities as defined in the European Union Directive 2009/65/EEC of 13 July 2009, as amended).

The Company is authorised as a UCITS under Part I of the Law dated 17 December 2010 on undertakings for collective investment, as amended.

The Company's financial year starts on 1 October and ends on 30 September of each year.

As at 30 September 2025, there were 48 separate active sub-funds (the "Funds"), providing shareholders with the opportunities for investment in a wide variety of markets, securities and currencies.

b) Aberdeen Global Indian Equity Limited (the Subsidiary)

Indian Equity Fund makes a substantial part of its investments in India through a wholly owned Subsidiary, Aberdeen Global Indian Equity Limited, a company incorporated in Mauritius. Transactions involving both the Fund and its Subsidiary are accounted for in accordance with their economic substance and accordingly these financial statements reflect the activities of Indian Equity Fund and of its Subsidiary as if all the activities had been undertaken by Indian Equity Fund. On 30 May 2015, the tax residency of the Subsidiary changed from Mauritius to Singapore.

c) Presentation of the financial statements

The accompanying financial statements present the assets and liabilities of the individual Funds and of the Company taken as a whole. The financial information of each individual Fund is expressed in the currency designated in the prospectus for that particular Fund and the combined statements of the Company are expressed in United States Dollars ("USD"). The financial statements have been prepared in accordance with Luxembourg GAAP, applicable to Undertakings for Collective Investment Funds, and with the format prescribed by the Luxembourg authorities for Luxembourg investment companies.

The combined statements were calculated on the basis of aggregation of individual Funds' statements with no elimination of cross-investments if any. As of 30 September 2025, the cross-investments within the Company represent USD 52,279,933 or 0.35% of the combined net asset value of the Company.

The Net Asset Values ("NAVs") disclosed in the financial statements are the dealing NAVs calculated on 30 September 2025 based on intra-day stock market prices. If the NAVs had been calculated based on closing stock market prices, the NAVs of the following Funds would have increased as follows:

Fund	Impact (% of NAV)
European Sustainable Equity Fund	0.51
Global Sustainable Equity Fund	0.68

The financial statements of the Funds have been prepared on a going concern basis, except for the Funds closed to investors during the year and the Funds which will be closed post year-end (disclosed in the table below), which have been prepared on a non-going concern basis:

Fund closures

Fund	Base currency	Closure date
abrdn - CCBI Belt & Road Bond Fund	USD	29 October 2025
Asian High Yield Sustainable Bond Fund	USD	10 October 2024
China Next Generation Fund	USD	27 March 2026
Europe ex UK Sustainable Equity Fund	EUR	6 March 2026
Global Mid-Cap Equity Fund	USD	16 October 2025
Latin American Equity Fund	USD	26 June 2025

As at 30 September 2025, the liquidation of the below Funds is not complete. There is a remaining cash balance that will be used to cover outstanding liabilities, as follows:

Fund	Base currency	Cash balance
Latin American Equity Fund	USD	69,166

Notes to the Financial Statements (continued)

2. Accounting policies

a) Accounting convention

These financial statements are prepared in accordance with Luxembourg regulations applicable to Undertakings for Collective Investment Funds. The financial statements have been prepared under the historical cost convention modified by the revaluation of investments.

b) Investment valuation

In determining the value of the assets of the Company, each security and money market instrument listed on a recognised stock exchange or dealt on any other regulated market that operates regularly, is recognised and is open to the public, will be valued at their intra-day prices. In the event there should be several such markets, they will be valued on the basis of the intra-day price on the main market for the relevant security.

Securities and money market instruments not listed or traded on a stock exchange or not dealt on another regulated market will be valued at their fair value at which it is expected they may be resold as determined prudently and in good faith by the Board of Directors. Suspended or delisted securities held at 30 September 2025 have been valued at fair value as instructed by the Valuation and Pricing Committee, details of these securities are included in Schedule of Investments.

All other securities and other assets will be valued at fair market value as determined in good faith pursuant to procedures established by the Board of Directors.

In the event that the intra-day price does not, in the opinion of the Board of Directors, truly reflect the fair market value of the relevant securities and money market instruments, the value of such securities will be defined by the Board of Directors based on the reasonably foreseeable sales proceeds determined prudently and in good faith.

In accordance with the Company's prospectus, the fair value adjustment mechanism is applicable whenever a triggering event occurs. During the year, no fair value adjustments were applied to any of the Funds.

Mortgage and other asset backed securities are independently priced using appropriate models and certain corporate bonds may be priced using indicative broker quotes.

The liquidating value of future, forward or options contracts, if any, traded on exchanges or on other regulated markets shall be based upon the last available settlement prices of these contracts on exchanges and regulated markets on which the particular future, forward or options contracts are traded by the Company; provided that if a future, forward or options contract could not be liquidated on the day with respect to which net assets are being determined, the basis for determining the liquidating value of such contract shall be such value as the Board of Directors may deem fair and reasonable.

As at 30 September 2025, the securities issued by Russian companies are valued at "nil" in the portfolio statements of the respective Funds exposed to such securities. This nil value may not reflect the intrinsic value of those companies but rather reflect the fact that those securities are not tradable as of 30 September 2025.

c) Investment income

Interest is accrued on a day-to-day basis. In the case of debt securities issued at a discount or premium to maturity value, the total income arising on such securities, taking into account the amortisation of such discount or premium on an effective interest rate basis, is spread over the life of the security.

Interest income on bonds may be received either in cash or as a Payment in Kind ("PIK"). Where a PIK bond settles physically (either because it matures, or it pays interest) the interest income is recognised as the lower of the market value and the nominal value of the settlement.

In the event where there is no physical settlement, the factor change on that holding is recognised as interest income in the Statement of Operations and Changes in Net Assets at the point when the factor change occurs.

Dividends are accounted for on an ex-dividend basis. Interest and dividend income are stated net of irrecoverable withholding taxes, if any.

Securities lending commission is accounted for on an accruals basis.

Bank interest income is accounted for on an accruals basis. It is composed of interest on bank account and interest on term deposits.

d) Foreign exchange

The books and records of each Fund are denominated in the base currency of the corresponding Fund. Amounts denominated in other currencies are translated into the base currency on the following basis:

Notes to the Financial Statements (continued)

2. Accounting policies (continued)

d) Foreign exchange (continued)

(i) investment valuations and other assets and liabilities initially expressed in other currencies are converted on each business day into the base currency using exchange rates prevailing on each business day; and

(ii) purchases and sales of foreign investments, income and expenses are converted into the base currency using currency exchange rates prevailing on the respective dates of such transactions.

The combined statements correspond to the sum of the statements of each Fund, converted to USD. The combined figures in the Statement of Operations and Changes in Net Assets have been calculated using the exchange rates ruling at the year-end date. The resulting foreign exchange adjustment of USD 55,328,000 represents the movement in exchange rates between 30 September 2024 and 30 September 2025. This is a notional amount, which has no impact on the net assets of the individual Funds.

Realised and unrealised exchange differences on the revaluation of foreign currencies are taken to the Statement of Operations and Changes in Net Assets.

Main exchange rates used as at 30 September 2025 are as follows:

1 USD =	3.673000	AED	1 USD =	302.415392	LKR

e) Realised gains and losses on investments

A realised investment gain or loss is the difference between the historic average cost of the investment and the sale proceeds. These are converted into the base currency using currency exchange rates prevailing on the respective dates of the sale transactions.

Notes to the Financial Statements (continued)

2. Accounting policies (continued)

f) Forward foreign exchange contracts

Unsettled forward foreign exchange contracts are valued using forward rates of exchange applicable at the year-end date for the remaining period until maturity. All unrealised appreciation and depreciation are recognised in the Statement of Operations and Changes in Net Assets. Currently forward positions are not collateralised.

The quoted leverage excludes the impact of the foreign exchange forwards used in currency hedged share classes which are held for those shareholders only. It also excludes the temporary impacts that arise when renewing currency forwards and when closing some exchange cleared derivatives. Although the renewal of currency forwards and closure of exchange traded derivatives results in no change or a reduction in market exposure, gross derivative leverage would increase because new equal and offsetting derivative contracts are traded to facilitate this efficiently. The offsetting contracts are held to their maturity date, which is less than 5 working days for currency forwards.

g) Futures

Futures contracts are valued at the exchange quoted intra-day price. Initial margin deposits are made in cash upon entering into futures contracts. During the period the future contract is open, changes in the value of the contract are recognised as unrealised appreciation and depreciation by marking to market on a daily basis to reflect the market value of the contract.

Variation margin payments are made or received, depending upon whether unrealised appreciation or depreciation are incurred. Variation margin payments are recorded in amounts held the futures clearing house and brokers account in the Statement of Net Assets and related movements on unrealised results are recorded in the Statement of Operations and Changes in Net Assets. When the contract is closed, the Fund records a realised gain or loss equal to the difference between the proceeds from (or cost of) the closing transaction and the opening transaction.

h) Swap/option contracts

Funds may enter into swap agreements such as credit default swaps, interest rate swaps, swaptions, overnight index swaps and inflation linked swaps. Gains or losses resulting from swap contracts are recognised in the Statement of Operations and Changes in Net Assets. Swaps are valued at the fair value intra-day price using external independent third party supplied prices as determined in good faith, pursuant to procedures established by the Board of Directors.

Any outstanding interest accrual on swaps is recorded as either a net receivable or net payable in the Statement of Net Assets. Similarly, the interest received or paid on swaps is disclosed as a net amount in the Statement of Operations and Changes in Net Assets.

Funds may enter into the purchase of call and put options. Gains or losses resulting from option contracts are recognised in the Statement of Operations and Changes in Net Assets. Options are valued at the exchange quoted intra-day price.

3. Share class information

a) General

Within each Fund, the Company is entitled to create different share classes. These are distinguished by their distribution policy or by any other criteria stipulated by the Directors. Please refer to the prospectus for further details. For a list of current live share classes please visit aberdeeninvestments.com.

The Funds are valued at 1:00 pm Luxembourg time on each dealing day, with the exception of Latin American Equity¹ which was valued at 23:59 hours Luxembourg time on each dealing day.

¹ See note 13.

b) UK Reporting Fund Regime

UK Reporting Fund Regime Status is granted prospectively by the UK taxation authorities. It is the intention of the Board of Directors to continue to comply with the requirements of the Reporting Fund Regime for certain share classes.

Equalisation applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares.

Annually and within six months of the year-end, the Manager will publish the UK Reporting Regime Report to investors for all share classes granted reporting Fund status on its website (aberdeeninvestments.com).

The UK Reporting Regime Report to investors for each share class can also be requested in writing by contacting the Shareholder Service Centre as detailed in the Management and Administration section of this report.

Notes to the Financial Statements (continued)

3. Share class information (continued)

c) Switches

Shares in one Fund may be exchanged or switched into shares of the same or a different class in another Fund or of a different class in the same Fund, subject to the qualifications for investment being met, on any dealing day for the relevant Funds. Shares in the same class may be switched between accumulation and distribution shares within the same class. Investors may switch either a specific number of shares or shares of a specified value.

For full details on switching contact the Global Distributor, UK Distributor, Transfer Agent or client.operations.emea@aberdeenplc.com.

d) Swing pricing adjustment

Frequent subscriptions and redemptions can potentially have a dilutive effect on the Fund's NAV per share and be detrimental to the long-term investors as a result of the transaction costs that are incurred by the Fund in relation to the trades undertaken by the Investment Manager.

The Board of Directors' current policy through delegation to the Investment Managers' Investor Protection Committee (IPC) is to apply a swing pricing adjustment to the NAV of each share class of all Funds. A swing factor is applied whenever net subscriptions or redemptions exceed a certain threshold determined by the Board of Directors (having considered prevailing market conditions).

The swing pricing adjustment will be recorded in the relevant Fund's NAV and becomes part of the Fund's relevant dealing NAV.

The swing pricing adjustment is a percentage adjustment applied to each share class in a Fund on a dealing day determined on the basis of estimates of any dealing charges (including commission and/or other costs) and/or any bid/offer spread that the Board of Directors believes are appropriate to take into account in respect of that Fund. Such dealing charges will reflect costs and liabilities not included in the calculation of the NAV of the relevant share class. The adjustment is recorded in the Statement of Net Assets and Statement of Operations and Changes in Net Assets as "adjustment due to swing pricing".

The net asset values as at 30 September 2025 disclosed in this report do not include any swing pricing adjustments. Had there been a swing at the year-end then the values disclosed may differ from those published on 30 September 2025 for dealing into the Funds. The following Funds applied swing pricing as at 30 September 2025:

The maximum swing factor rate applied on net subscriptions/redemptions exceeding a certain threshold during the year ended 30 September 2025 was 0.75%. There is no pre-set maximum swing factor, the Directors can raise this limit if necessary to protect the interests of investors.

Further information can be found at aberdeeninvestments.com.

e) Equalisation on the subscription and redemption of shares

Equalisation is operated in connection with the subscription and redemption of shares. It represents the income element included in the price for the subscription and redemption of shares.

Notes to the Financial Statements (continued)

4. Expenses

a) Investment management fees

The Investment Managers receive fees for the provision and co-ordination of investment services to the Company, which shall not exceed 3% of the NAV of each Fund. The fees are calculated as a percentage of the NAV of each Fund.

For the purpose of the calculation, the value of each Fund (and the value attributable to each share class) is taken as at the NAV per share on the previous dealing day, taking into account any subscriptions and/or redemptions on that day.

These fees are accrued daily and are paid monthly in arrears to the Investment Managers. abrdn Investments Limited pays the fees of the Sub-Investment Managers. For certain classes of shares, the Investment Managers reserve the right, at their discretion, to reallocate any investment management fee they receive to certain recognised financial intermediaries or institutions in compliance with applicable laws and regulations.

Where a Fund invests in an open-ended collective investment scheme which is operated or managed by the Investment Manager or an associate of the Investment Manager, no additional annual management charge is incurred by the Fund on such an investment.

The following investment management fees rates were applicable during the year ended 30 September 2025:

¹ The investment management fee for the class K decreased from 0.40 to 0.30, effective 5 December 2024.

b) Management Company charge

The Company pays an annual charge to the Management Company up to a maximum of 0.05% of the NAV of each Fund.

For the purpose of the calculation, the value of each Fund (and the value attributable to each share class) is taken as at the NAV per share on the previous dealing day, taking into account any subscriptions and/or redemptions on that day.

The Management Company charge shall be accrued daily and payable monthly in arrears. The current Management Company charge is an annual rate of 25 basis points (0.025%).

The Management Company charge shall be used to pay the Management Company for the services it provides to the Company (in particular the performance of its monitoring role) and shall include reimbursement for any additional regulatory capital costs incurred by the Management Company by reason of its appointment per annum.

c) Transaction costs

Transaction costs may arise on the acquisition and disposal of investments and these costs may include fees and commissions paid to agents, advisors, brokers, and dealers. These are included in "Net realised gain/(loss) on investments" in the Statement of Operations and Changes in Net Assets.

Dealing commission is usually paid for transactions in securities and derivatives over an exchange (e.g., equities). Transaction costs may not be separately identifiable for transactions that do not occur over an exchange as the costs may be included in the transaction price (e.g., bonds and money market instruments).

During the year ended 30 September 2025, the Funds incurred commission expenses relating to the sale and purchase of future contracts which have been included in the Statement of Operations and Changes in Net Assets as "Net realised gain/(loss) on future contracts". Similarly, during the year ended 30 September 2025, the Funds incurred commission expenses relating to the sale and purchase of option contracts which have been included in the Statement of Operations and Changes in Net Assets as "Net realised gain/(loss) on option/swaption contracts".

During the year ended 30 September 2025, there were no transaction costs incurred relating to the trading of swaps.

For the year ended 30 September 2025, the Funds incurred transaction costs which have been defined as commissions and tax relating to purchase or sale of transferable securities, money market instruments, derivatives or other eligible assets as follows:

d) General administration charge ("GAC")

A general administration charge ("GAC") rate of 0.08% is applied.

The operating expenses incurred by the Company are generally paid out of the assets of the relevant Fund. To seek to minimise the variability of these expenses, for a number of these operating expenses, a fixed rate change of up to a maximum of 0.10% is charged to each share class.

The level of the effective GAC below this maximum level may vary at the Board of Directors' discretion, as agreed with the Management Company, and different rates may apply across the Funds and share classes. The Board of Directors may amend the maximum fixed level of the GAC applicable to each share class at any time at its discretion upon prior notice to the relevant shareholders.

The effective GAC is calculated in the same way as the investment management fee set out in 4.a) above.

The effective GAC is disclosed as part of the ongoing charges of a share class in the relevant PRIIPS KID.

Full details of the GAC and the expenses that are included within the charges, can be found within the prospectus of the Company.

e) Distribution fees

Class B, class C and class W shares are subject to an annual distribution fee of 1% except for class B of Frontier Markets Bond for which a distribution fee of 0.75% is applied and except for class W of Short Dated Enhanced Income Fund for which a distribution fee of 0.50% is applied. These fees are accrued daily and paid monthly in arrears.

f) Depositary fees

The depositary fee is calculated at a rate determined by the territory or country in which the Fund assets are invested. Currently, the lowest rate is 0.0059% and the highest rate is 0.3085% of the NAV of the relevant Fund annually.

Notes to the Financial Statements (continued)

4. Expenses (continued)

g) Bank interest

Bank interest expenses arise if there are negative interest rates on deposits and also owing to overdrafts that may arise from time to time.

h) Redemption charge

There are no redemption charges applicable to any class of shares.

5. Dividend distribution

The Directors declared monthly dividends for the Funds as listed below, for the year ended 30 September 2025, to all shareholders on record on the last day of the relevant month.

¹ This dividend was declared on 1 October 2025 and recorded in that day's NAV, in line with the provisions of the prospectus.

6. Taxation

a) Taxe d'abonnement

Under legislation and regulations prevailing in Luxembourg, the Funds are subject to the "taxe d'abonnement" (subscription tax) at the rate of 0.05% per annum, except for the share classes which benefit from a reduced tax rate of 0.01% being the classes of shares dedicated to institutional investors. The tax is payable quarterly on the basis of the value of the net

Notes to the Financial Statements (continued)

6. Taxation (continued)

a) Taxe d'abonnement (continued)

assets of the Funds at the end of the relevant calendar quarter. For Funds with investment in funds already subject to taxe d'abonnement there are exemptions available. For more information, please refer to the prospectus.

b) Indian taxes

Shares in Indian companies and units of equity-oriented funds chargeable to STT are subject to short-term and long-term capital gains tax. Following a rate increase with effect from 23 July 2024, capital gains from the disposal of Indian listed shares held for more than 12 months are now taxable at 12.5% of net capital gains exceeding INR 100,000 (plus additional local taxes) and 20% (plus additional local taxes) when the shares are held for less than 12 months. For the purposes of calculating a provision it is assumed that a long-term holding strategy (more than 12 months) will be applied and therefore the provision will be based only on the long-term rate and methodology.

Aberdeen Global Indian Equity Limited (a subsidiary of abrdn SICAV I – Indian Equity), being a Singaporean tax resident entity, is expected to continue to benefit from exemption to Indian capital gains tax on any gains on disposal of shares which were acquired up to 31 March 2017. As such, no provision is accrued on any exempt holdings.

The following provisions have been recorded in the other payables caption of the financial statements:

Fund	Currency	Provision for unrealised gains on INR holdings '000
Asia Pacific Sustainable Equity Fund	USD	2,677
Asian SDG Equity Fund	USD	64
Asian Smaller Companies Fund	USD	1,737
Emerging Markets Equity Fund	USD	3,024
Emerging Markets ex China Equity Fund	USD	507

Emerging Markets Smaller Companies Fund	USD	374
Future Minerals Fund	USD	39
Global Innovation Equity Fund	USD	323
Global Sustainable Equity Fund	USD	274
Indian Equity Fund	USD	16,298

c) Withholdings tax reclaims

Where possible, withholding tax reclaims have been filed in respect of the withholding tax applied on dividends and interests on bonds received during recent years. Receivables with respect to the potential refunded amounts are only booked when they are virtually certain.

d) Provision for foreign taxes

Capital gains, dividends and interest on securities received from other countries may be subject to withholding or capital gains taxes imposed by such countries. It is the Company's policy to provide for any material liability to foreign capital gains and income taxes.

7. Soft commission/commission sharing

The Investment Manager has entered into soft commission/commission sharing arrangements with brokers in respect of which certain goods and services used to support investment decision making were received. The Investment Manager does not make direct payment for these services but transacts an agreed amount of business with the brokers on behalf of the Company and commission is paid on these transactions. The goods and services utilised for the Fund include research and advisory services; economic and political analysis, portfolio analysis including valuation and performance measurement, market analysis data and quotation services; computer hardware and software incidental to the above goods and services and investment related publications.

Notes to the Financial Statements (continued)

8. Directors' interests and remuneration

None of the Directors were materially interested in any contracts of significance subsisting with the Company either during the year or at 30 September 2025.

The collective remuneration of the Board of Directors charged to the Company amounts to USD 183,300 for the year ended 30 September 2025.

9. Transactions with connected persons

a) Cross trades

Transactions with connected parties during the year were entered into in the ordinary course of business and on normal commercial terms between the Funds and the Management Company, Investment Manager, Investment Adviser, and any entity in which those parties or their connected persons (as defined in the Code on Unit Trusts and Mutual Funds issued by the Securities and Futures Commission of Hong Kong) have a material interest. To the best of the Management Company's knowledge, the Funds' portfolios do not have any other transactions with connected persons except for those disclosed below:

^AThere were no commissions paid to Citigroup broker entities for the year ended 30 September 2025.

^BThe unrounded commissions paid to Citigroup broker entities for the year ended 30 September 2025 was USD 358.

b) Connected transactions

During the year the Investment Manager undertook certain sale and purchase transactions which were enacted through broker entities forming part of the same group of companies as the Depositary, Citibank, and the details of these are included in the table above. Such transactions were carried out on an arm's length basis at current market value and market rates, and consistent with and the best interests of the Company. To the best of the Investment Manager's knowledge as at the date of preparing this annual report, there are no transactions between the Funds' portfolios and the Management Company, the Investment Manager or any of their connected persons as principal.

c) Related party transactions

Transactions with connected persons outlined in the Expenses Note 4 have been entered into in the ordinary course of business and on normal commercial terms. At the reporting date, the Management Company, abrdn Investments Luxembourg S.A., was a subsidiary of Aberdeen Group plc (previously known as: abrdn plc).

As at 30 September 2025 other Funds/Trusts and mandates managed by Aberdeen Group plc (previously known as: abrdn plc) held investments in the Company valued at USD 3,046,658,420.

Notes to the Financial Statements (continued)

10. Overdraft facility

The Company has a USD 50 millions intra-day uncommitted unsecured credit line facility with Bank of America to finance short-term timing differences arising from subscriptions and redemptions. Any liability arising on this account will be recoverable from subscribers to the Company and is therefore not reflected in the financial statements of the Company.

11. Collateral

The Company paid/received cash collateral from the counterparties to the OTC financial derivative instruments in order to reduce the counterparty exposure, as detailed below:

Fund	Counterparty	Local currency	Local collateral received from the broker '000	Base currency	Base collateral received from the broker '000	Collateral expressed as a percentage of total net assets %
Climate Transition Bond Fund	Royal Bank of Canada	EUR	94	USD	110	0.08
Emerging Markets SDG Corporate Bond Fund	Royal Bank of Canada	USD	140	USD	140	0.07
Emerging Markets Total Return Bond Fund	Goldman Sachs	USD	150	USD	150	0.16

Fund	Counterparty	Local currency	Local collateral provided to the broker '000	Base currency	Base collateral provided to the broker '000	Collateral expressed as a percentage of total net assets %
Emerging Markets Total Return Bond Fund	Deutsche Bank	USD	120	USD	120	0.13

The company received non-cash collateral from the counterparties to the OTC financial derivative instruments in order to reduce the counterparty exposure, as detailed below:

Fund	Counterparty	Issuer	Local currency	Local collateral received from the broker '000	Base currency	Base collateral received from the broker '000	Collateral expressed as a percentage of total net assets %
Climate Transition Bond Fund	Morgan Stanley	United Kingdom Inflation-Linked Gilt	GBP	226	USD	304	0.23

The Company did not pay non-cash collateral to the counterparties to the OTC financial derivative instruments.

12. Securities lending

The Company has entered into a securities lending program for a number of equity and fixed income Funds. In return for making securities available for loan throughout the year, the Funds participating in the programs received fees which are reflected in the Financial Statements of each participating Fund under the "Securities lending income" caption. The Company has appointed Securities Finance Trust Company (the operating arm of eSec Lending) as agent for the equity and fixed income lending program. As remuneration for this agency role, Securities Finance Trust Company receives 10% of the fees from the securities lending program, abrdn Investments Limited (the Investment manager) receives 5% from the securities lending program and the Company receives 85% of the fees.

Collateralisation in the form of Government Bonds must be with a minimum issuer rating of AA (S&P rating) or Aa3 (Moody's rating). With respect to a government issuer that is rated by both Moody's and S&P, the lower of those two ratings shall apply.

The Company requires a minimum over-collateralisation of 102% of the value of the underlying securities. The haircut for all eligible collateral will vary between 0 and 2% so that the minimum over-collateralisation of the value of the underlying securities will never fall below 100%.

Notes to the Financial Statements (continued)

12. Securities lending (continued)

The following countries may be accepted as collateral:

Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Japan, Luxembourg, Netherlands, New Zealand, Norway, Sweden, Switzerland, United Kingdom & United States.

Collateralisation in the form of equities must be from the listed equities from the following indices. Please refer to the prospectus for further details.

Index	Country
S&P 500	United States
FTSE 100	United Kingdom
CAC 40	France
DAX	Germany
S&P/TSX 60	Canada
AEX	Netherlands
BEL 20	Belgium
OMX Stockholm 30	Sweden

c) Ukraine conflict

The military offensive from Russia against Ukraine since February 2022 continues to pose widespread sanctions on Russian assets. Geopolitical events can adversely affect assets of Funds and performance thereon. To ensure the fair treatment of investors, abrdn's Investor Protection Committee (IPC) undertakes regular reviews of market liquidity across each asset class and Fund, making appropriate adjustments where necessary.

abrdn's Valuation and Pricing Committee ("VPC") also continue to review the valuation of assets and the recoverability of income from those assets, making appropriate adjustments where necessary. The VPC is made up of a wide range of specialists across abrdn with a wide range of experience in asset pricing.

As at 30 September 2025, the securities issued by Russian companies are valued at "nil" in the portfolio statements of the respective Funds exposed to such securities. This nil value may not reflect the intrinsic value of those companies but rather reflect the fact that those securities are not tradable as of 30 September 2025.

d) Prospectus changes

New visa stamped prospectuses were issued on 5 December 2024, 7 May 2025 and 18 July 2025.

Notes to the Financial Statements (continued)

13. Significant events during the reporting year (continued)

e) Other significant event

General Information

Further information on abrdn SICAV I can be obtained from:

abrdn Investments Luxembourg S.A.

35a, avenue John F. Kennedy
L-1855 Luxembourg
Grand Duchy of Luxembourg

You can find further information about the Company, all available Funds within the Company and share classes at aberdeeninvestments.com. The prospectus, the PRIIPS KIDs, the articles of incorporation, the audited annual report and the unaudited semi-annual report of abrdn SICAV I may be obtained free of charge and in paper form from the Transfer Agent or the local paying agents, representatives and information agents. Please refer to the prospectus for the contact addresses of the local paying and information agents, representatives and information agents.

For investors located in EU/EEA countries, and where the Company is registered for distribution, and unless otherwise specified, facilities according to Article 92(1)(a) of the EU Directive 2009/65/EC (as amended by Directive 2019/1160) are available from the Transfer Agent.

The following facilities according to Article 92(1)(b) to (e) of the EU Directive 2009/65/EC (as amended by Directive 2019/1160) are available at www.eifs.lu/abrdn.

1. Information on how orders (subscription, repurchase and redemption) can be made and how repurchase/redemption proceeds are paid;
2. Information and access to procedures and arrangements relating to investors' rights and complaints handling;
3. The latest prospectus, the articles of incorporation, the annual and semi-annual reports, net asset value as well as the key information documents.

Subscription and redemption of shares

Applications for subscription, redemption and conversion of shares should be sent to the Transfer Agent.

Furthermore, any additional information which is available at the registered office of the Company will also be available at the Transfer Agent.

Share price publication

Subscription prices and redemption prices are available at aberdeeninvestments.com and are also available at the offices of the Transfer Agent.

Taxation

Tax regulations and the practices of financial authorities are constantly subject to change. Because of the complexity of tax laws in different jurisdictions, it is recommended that investors contact a tax adviser regarding the effect on their individual tax situation.

Additional Information for investors in Germany

For the following Funds of the Company, no notification for marketing in the Federal Republic of Germany has been filed with the Federal Financial Supervisory Authority (BaFin), so that shares of these Funds may not be marketed to investors within the jurisdiction of the Investment Code (KAGB):

- abrdn – CCBI Belt & Road Bond Fund
- Asia Pacific Dynamic Dividend Fund
- Global High Yield Sustainable Bond Fund

It is possible to view the prospectus, the PRIIPS KIDs, the articles of incorporation of the Company as well as the annual and semi-annual reports at the Transfer Agent.

Furthermore, subscription, redemption and conversion prices of the shares and any notices to the shareholders and any additional information which is also available at the registered office of the Company will be available at the Transfer Agent.

General Information (continued)

Additional Information for investors in Germany (continued)

Share price publication

Subscription, redemption and conversion prices of the shares will also be available at aberdeeninvestments.com and at the offices of the Transfer Agent. Any notices to the shareholders will be published in on aberdeeninvestments.com.

In addition, communications to investors in the Federal Republic of Germany will be sent by mail in the following cases:

- suspension of the redemption of shares,
- termination of the management of the Fund or its liquidation,
- any amendments to the Fund rules which are inconsistent with the previous investment principles, which affect material investor rights or which relate to remuneration and reimbursement of expenses that may be paid or made out of the asset pool,
- merger of the Fund with one or more other Funds, and
- the change of the Company into a feeder fund or the modification of a master fund.

Additional Information for investors in Switzerland

1. Representative

The representative in Switzerland is FIRST INDEPENDENT FUND SERVICES LTD, Feldeggstrasse 12, 8008 Zurich, Switzerland.

2. Paying agent

The paying agent in Switzerland is NPB Neue Privat Bank AG, Limmatquai 1, 8001 Zurich, Switzerland.

3. Place where the relevant documents may be obtained

The prospectus, the PRIIPS KIDs, the articles of incorporation, and the annual and semi-annual reports may be obtained free of charge from the Swiss representative.

4. Publications

Publications in respect of abrdn SICAV I are published on the electronic platform of fundinfo AG Zurich (www.fundinfo.com). The subscription and redemption prices or the NAV with indication of "excluding commissions" are published on a daily basis on www.fundinfo.com.

5. Payment of retrocessions and rebates

In connection with distribution in Switzerland, abrdn Investments Luxembourg S.A. or its affiliates may pay retrocessions in order to cover the distribution and procurement activities of shares. These activities include but are not limited to the organisation of road shows, the attendance of events and fairs, the production of marketing material and the training of distribution collaborators. The recipients of the retrocessions must ensure transparent disclosure and inform investors, unsolicited and free of charge, about the amount of remuneration they may receive for distribution. On request, the recipients of retrocessions must disclose the amounts they actually receive for distributing the Funds of the investors concerned. Retrocessions are not deemed to be rebates even if they are ultimately passed on, in full or in part, to the investors. Rebates may also be paid directly to the investors in order to reduce the fees and cost attributed to the Fund, as long as they:

- are paid from fees which have been charged to the assets of the Fund and not in addition;
- are paid on the basis of objective criteria;
- are paid to all investors fulfilling the objective criteria in the same amount and at the same time.

Rebates can only be paid if the following preconditions are fulfilled:

- The minimum investment in a collective investment scheme or in a range of collective investment schemes;
- The amount of fees resulting from the investment;
- The expected duration of the investment;
- The readiness of the investor to support the launch of the Fund.

General Information (continued)

Additional Information for investors in Switzerland (continued)

5. Payment of retrocessions and rebates (continued)

At the request of the relevant investor receiving such rebate, abrdn Investments Luxembourg S.A. or its affiliates must disclose the amount free of charge.

6. Place of performance and jurisdiction

The place of performance and jurisdiction for the shares distributed in or from Switzerland is at the registered office of the representative or at the registered office or place of residence of the investor.

Appendix 1: Risk Management (Unaudited)

The market risk measurement and monitoring of the Funds is carried out using either the Commitment approach or the Value at Risk (VaR) approach.

Funds which do not make significant use of financial derivative instruments and/or limit their use of financial derivative instruments to efficient portfolio management or hedging strategies are monitored using the Commitment approach.

Funds which utilise financial derivative instruments for efficient portfolio management purposes and/or for investment purposes in pursuing their investment objective (in addition to those used for hedging purposes) are monitored using either the relative or absolute VaR approach.

Risk Type

The Management Company uses the Commitment approach and the VaR approach for the abrdn SICAV I Funds as detailed below.

Commitment approach

The Commitment approach is based on the positions of financial derivative instruments, converted into their corresponding underlying equivalents as per ESMA Guidelines 10-788 – BOX 2.

Netting and Hedging might be considered for financial derivative and their underlying assets. The sum of these underlying equivalents must not exceed the net asset value of the Fund.

The global risk on derivatives has been determined according to the commitment approach during the reporting year.

Value at Risk (VaR) approach

In accordance with CSSF Circular 11/512, the Regulatory VaR limit associated with a Fund's total portfolio positions must not exceed two times (i.e. 200%) the VaR of its assigned Risk Benchmark for Funds under Relative VaR approach or 20% VaR (99% confidence level, 20-day holding period) for Funds monitored under the absolute VaR approach.

The VaR model used is a MonteCarlo Simulation model with historical observation period of risk factors of 3 years.

Appendix 1: Risk Management (Unaudited) (continued)

Value at Risk (VaR) approach (continued)

The tables below show the Funds under VaR approach and Relative VaR approach and the related Risk Benchmark for each Fund.

Appendix 1: Risk Management (Unaudited) (continued)

Leverage

For Funds measuring and monitoring the global risk on derivatives via VaR approach, the Management Company also determines the sum of the nominal values or equivalent values of all the relevant derivatives and estimates in this regard a degree of the expected average value (leverage).

The expected levels of leverage indicated below reflect the use of all derivative instruments within the portfolio of a given Fund. An expected level of leverage does not necessarily represent an increase of risk in the Fund as some of the financial derivative instruments used may even reduce the risk. Shareholders should note that the "Sum of Notionals" approach of the expected level of leverage does not make a distinction as to the intended use of a derivative, e.g. being either hedging or investment purposes.

The "Sum of Notionals" calculation typically results in a higher leverage figure than for the commitment approach calculation predominantly due to the exclusion of any netting and/or hedging arrangements.

The average leverage figures below have been compiled based on the daily figures from the period 1 October 2024 to 30 September 2025.

Fund	Global Exposure	Average Leverage Sum of Notional %
Asian Bond Fund	Relative VaR	119.88
Asian Credit Opportunities Fund ¹	Relative VaR	34.62
Asian High Yield Sustainable Bond Fund ¹	Relative VaR	0.48

Lending transactions operate on a rolling one day contract and can be recalled on demand.

Data on reuse of collateral

Collateral is held with a segregated account by the Funds' Custodian and will not be sold, re-invested or pledged.

Safekeeping of collateral granted

At the year-end there was no collateral posted by the Funds.

Received

As at the year-end date, collateral was received for securities lending transactions into a segregated account at the Funds' Custodian in the form of Government bonds and main market listed equity valued at USD 467 million.

Appendix 2: Securities Financing Transactions (Unaudited) (continued)

Return and cost per type of SFT

The revenues arising from securities lending is detailed in Note 12.

Appendix 3: Remuneration Policy (Unaudited)

Undertakings for Collective Investment Transferable Securities V Directive (UCITS V)

Remuneration Disclosure UCITS V Annual Report and Accounts

Remuneration Policy

The Aberdeen Group plc Remuneration Policy (the "Policy") applies with effect from 1 January 2024. The purpose of the Policy is to document clearly the remuneration policies, practices and procedures of Aberdeen as approved by the Aberdeen Group plc Remuneration Committee (the "Committee"). The Policy is available on request.

The Policy applies to employees of the Aberdeen group of companies ("Group" or "Aberdeen"), including UCITS V Management Companies ("ManCos") and the UCITS V funds that the ManCo manages.

Remuneration Principles

Aberdeen applies Group wide principles for remuneration policies, procedures and practices ensuring that:

- Remuneration within the Group is simple, transparent and fair.
- Our Policy supports our long-term strategy by reinforcing a performance-driven culture. It aligns the interests of our employees, shareholders and, importantly, our clients/customers.
- Our remuneration structure is flexible to accommodate the different challenges and priorities across all businesses and functions as appropriate.
- Remuneration policies, procedures and practices promote good conduct, including sound and effective risk management and do not encourage risk taking that exceeds the level of tolerated risk appetite.
- Remuneration extends beyond the provision of fixed and variable pay, with a focus on the retirement provision and the wellbeing needs of our employees, as part of our remuneration philosophy.
- Total remuneration delivered is affordable for the Group.

Remuneration Framework

Employee remuneration is composed of fixed and variable elements of reward as follows:

- a) Fixed remuneration (salary and cash allowances, where appropriate) and Benefits (including pension).
- b) Variable remuneration (bonus, a proportion of which may be subject to retention or deferral depending on role and regulatory requirements; senior employees may also be awarded a long-term incentive award).

Appropriate ratios of fixed: variable remuneration will be set to as to ensure that:

- a) Fixed and variable components of total remuneration are appropriately balanced; and
- b) The fixed component is a sufficiently high proportion of total remuneration to allow Aberdeen to operate a fully flexible policy on variable remuneration components, including having the ability to award no variable remuneration component in certain circumstances where either individual and/or Group performance does not support such an award.

Base salary	Base salary provides a core reward for undertaking the role and depending on the role, geographical or business market variances or other indicators, additional fixed cash allowances may make up a portion of fixed remuneration. Periodic reviews take into account the employee's role, scope of responsibilities, skills and experience, salary benchmarks (where available) and, where relevant, any local legislative or regulatory requirements.
Benefits (including retirement benefit where appropriate)	Benefits are made up of core benefits which are provided to all employees; and extra voluntary benefits that may be chosen by certain employees which may require contribution through salary sacrifice or other arrangements. Retirement benefits are managed in line with the relevant legislative requirements and governance structures. In certain, very limited circumstances, a cash allowance may be offered in lieu of a retirement arrangement.

Appendix 3: Remuneration Policy (Unaudited) (continued)

Annual Awards	Performance	Bonus	Employees who have been employed during a performance year (1 January to 31 December) may be eligible to be considered for an annual bonus in respect of that year. Annual bonuses are based upon Group, Business, Function, Team and Individual performance (with individual performance assessed against agreed goals and behaviours). The variable remuneration pool for all eligible employees, including Identified Staff or Material Risk Takers ("MRTs"), is determined initially by reference to profitability and other quantitative and qualitative financial and non-financial factors, incorporating consideration of all risk categories, including sustainability risks* (on an ex-post and ex-ante basis). In reaching its final funding decision, the Committee exercises its judgement to ensure that the outcome reflects holistic Company performance considerations. abrdrn Investments Luxembourg S.A. has specific obligations to act in the best interests of the UCITS V funds it manages and its investors. Accordingly, the performance of the underlying funds and the interests of investors (including, where relevant, investment risk) are also taken into account as appropriate. The Risk and Capital Committee and the Audit Committee formally advise the Committee as part of this process. The overall bonus pool is allocated to businesses and functions based on absolute and relative performance of each business and function and their alignment with strategic priorities and risk considerations. Allocation by region and subdivision/team is determined on a discretionary basis by the business/function and regional heads based on the absolute and relative performance of the constituent teams and alignment with strategic priorities. Individual annual bonus awards are determined at the end of the 12-month performance period with performance assessed against financial and non-financial individual objectives, including behaviour and conduct. Individual awards for Identified Staff are reviewed and approved by the Committee (with some individual award approvals delegated, as appropriate, to the Group's Compensation Committee, over which the Committee retains oversight). In carrying out these approvals, the Committee seeks to ensure that outcomes are fair in the context of overall Group performance measures and adjusted, where appropriate, to reflect input from the Risk and Capital Committee and the Audit Committee. Variable remuneration awards are subject to deferral for a period of up to three years. A retention period may also be applied as required by the relevant regulatory requirements. Deferral rates and periods comply, at a minimum, with regulatory requirements. In addition to the application of ex-ante adjustments described above, variable remuneration is subject to ex-post adjustment (malus / clawback arrangements).

*According to SFDR, sustainability risk means an environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

Appendix 3: Remuneration Policy (Unaudited) (continued)

Other elements of remuneration – selected employees	The following remuneration arrangements may be awarded in certain very limited circumstances: Carried Interest Plans – These arrangements are designed to reward performance in roles where a carried interest plan is appropriate. Selected employees are granted carried interest shares in private market funds established by the Group. Buy-Out Awards/Guaranteed Bonuses – These are intended to facilitate/support the recruitment of new employees. Buy-outs are not awarded, paid or provided unless they are in the context of hiring new employees. Guaranteed bonuses are not awarded, paid or provided unless they are exceptional and in the context of hiring new employees and limited to the first year of service. These awards are only made where such a payment or award is permitted under any relevant remuneration regulations and are designed to compensate for actual or expected remuneration foregone from previous employers by virtue of their recruitment. Retention and Special Performance Awards / LTIP – Supports retention and/or the delivery of specific performance outcomes and/or to incentivise senior employees to support the long-term, sustained performance of Aberdeen. The Company may determine that it is appropriate to grant such awards in limited circumstances. Awards are structured to deliver specific retention and/or performance outcomes. Retention and/or special performance awards comply with all relevant regulatory requirements. Severance Pay – Payment made to support an employee whose role is considered to be redundant. Severance payments comply with any legislative and regulatory requirements and any payments are inclusive of any statutory entitlement. In the event of severance, the treatment of any individual elements of an employee's remuneration is governed, as appropriate, by relevant plan or scheme rules.

Control Functions

The Group ensures that, as appropriate, senior employees engaged in a control function are independent from the business units they oversee and have appropriate authority to undertake their roles and duties. These include, but are not necessarily limited to, Risk, Compliance and Internal Audit function roles. Senior employees engaged in a control function are remunerated in a way that ensures they are independent from the business areas they oversee, have appropriate authority and have their remuneration directly overseen by the Committee.

Conflicts of Interest

The Policy is designed to avoid conflicts of interest between the Group and its clients and is designed to adhere to local legislation, regulations or other provisions. In circumstances or jurisdictions where there is any conflict between the Policy and local legislation, regulations or other provisions, then the latter prevail. Where the Committee receives input from members of management on the remuneration arrangements in operation across the Group, this never relates to their own remuneration.

Personal Investment Strategies

The Company adheres to the regulatory principles and industry best practice on the use of personal hedging strategies which act in restricting the risk alignment embedded in employee remuneration arrangements.

UCITS V Identified Staff/MRTs

The 'Identified Staff' or MRTs of abrdn Investments Luxembourg S.A. are those employees who could have a material impact on the risk profile of abrdn Investments Luxembourg S.A. or the UCITS V funds it manages. This broadly includes senior management, decision makers and control functions. For the purposes of this disclosure, 'Identified Staff' includes employees of entities to which activities have been delegated.

Quantitative Remuneration Disclosure

The table below provides an overview of the following:

- Aggregate total remuneration paid by abrdn Investments Luxembourg S.A. to its entire staff; and
- Aggregate total remuneration paid by abrdn Investments Luxembourg S.A. to its UCITS V 'Identified Staff'.

Amounts shown reflect payments made during the financial reporting period in question. The reporting period runs from 1 January 2024 to 31 December 2024 inclusive.

Appendix 3: Remuneration Policy (Unaudited) (continued)

	Headcount	Total Remuneration GBP'000
abrdn Investments Luxembourg S.A. staff¹	1,187	162,472
of which		
Fixed remuneration		125,039
Variable remuneration		37,433
abrdn Investments Luxembourg S.A. 'Identified Staff'²	90	43,847
of which		
Senior Management ³	38	28,375
Other 'Identified Staff'	52	15,472

¹ As there are a number of individuals indirectly and directly employed by abrdn Investments Luxembourg S.A. this figure represents an apportioned amount of Aberdeen's total remuneration fixed and variable pay, apportioned to the ManCo on an AUM basis. The Headcount figure provided reflects the number of beneficiaries calculated on a Full Time Equivalent basis.

² The Identified Staff disclosure relates to UCITS V MRTs and represents total compensation of those staff of the ManCo who are fully or partly involved in the activities of the ManCo.

³ Senior Management are defined in this table as ManCo Directors and members of the Aberdeen Group plc Board, together with its Executive and Group Operating Committees, Investment Executive members and the Chief Product and Marketing Officer.

Appendix 4: French Plan d'Épargne en Actions ("PEA") Disclosure (Unaudited)

Europe ex UK Sustainable Equity Fund

The Fund has undertaken, by virtue of the application of article 91, paragraph L of Annex II of the French "Code général des impôts", to ensure that at least 75% of the net assets of the Fund are permanently invested in the eligible securities mentioned in paragraphs a, b and c of section 1° of article L.221-31 of the French "Code monétaire et financier".

As at the date of this report, the Fund had the following % in PEA eligible assets:

Europe ex UK Sustainable Equity Fund 79.65%.

The PEA eligibility of the Fund results from, to the best knowledge of the Company, tax law and practices in force in France as at 30 September 2025. Such tax law and practices may change from time to time and, therefore, the Fund which may currently be held within the framework of a PEA could lose its PEA eligibility. The Fund could lose its PEA eligibility due to changes impacting its investment universe or benchmark index.

Appendix 5: Sustainability Related Disclosures (Unaudited)

The EU Sustainable Finance Disclosure Regulation (SFDR) sets out in Articles 8 and 9 the sustainability-related reporting requirements, respectively for Funds that promote environmental or social characteristics and Funds that have sustainable investments as their objective. In addition, all financial products are required to disclose (see Company's prospectus) their approach to integrating sustainability risks into the investment decision-making in line with Article 6 of the SFDR. The following table outlines the SFDR Article under which the Funds make sustainability-related reporting.

¹ See note 13.

The above Article 6 Funds do not promote environmental or social characteristics and have no sustainable investment objectives. The investments underlying these financial products do not take into account the EU criteria for environmentally sustainable economic activities. These Funds also do not consider principal adverse impacts.

The above Article 8 Funds promote environmental or social objectives. The "do no significant harm" principle applies only to those investments underlying the financial products that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of these financial products do not take into account the EU criteria for environmentally sustainable economic activities.

The above Article 9 Funds have sustainable investments as their objective.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - All China Sustainable Equity Fund**

Legal entity identifier **549300LJPPGVR19E3P13**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 41.89% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 0%, ESG Q2: 57.47%, ESG Q3: 41.46%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 43.49% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the ESG rating based on MSCI data when compared with the benchmark:

- Fund rating A
- Benchmark rating BBB

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

- **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 0.0%, ESG Q2: 30.2%, ESG Q3: 61.4%. The Fund achieved a 75% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (BBB) when compared with the benchmark (BBB).

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

- i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

- ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.

- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.

- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
TENCENT HOLDINGS LTD	Communications	9.85	China
ALIBABA GROUP HOLDING LTD	Consumer Discretionary	7.13	China

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	99.27%	98.89%	95.27%
Sustainable investment	41.89%	41.89%	39.89%
Other environmental	19.03%	23.03%	16.78%
Social	22.86%	19.47%	23.11%

● ***In which economic sectors were the investments made?***

Sector	Sub-sector	% Assets
Communications	Media	22.73
Consumer Discretionary	Retail & Whsle - Discretionary	17.84
Consumer Discretionary	Consumer Discretionary Products	13.14
Financials	Banking	10.74
Technology	Tech Hardware & Semiconductors	8.50
Financials	Insurance	5.41
Financials	Financial Services	4.81
Consumer Staples	Consumer Staple Products	4.31
Industrials	Industrial Products	4.21
Health Care	Health Care	2.80
Real Estate	Real Estate	1.17
Materials	Materials	1.11
Communications	Telecommunications	0.96
Unclassified	Unclassified	0.81
Utilities	Utilities	0.56
Industrials	Industrial Services	0.37
Energy	Renewable Energy	0.22
Technology	Software & Tech Services	0.18
Consumer Staples	Retail & Wholesale - Staples	0.12

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 19.03% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 22.86%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 0.73% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Labour Rights, Supply Chain Management, and Corporate Governance:

Mindray: We had an engagement with Mindray to understand their efforts being made in ESG practices and disclosures. Mindray is ambitious in strengthening their disclosures in carbon emission (scope 3 in development), product safety (redesigned product safety process) and talent management (global coverage of training & benefits), while invests heavily in expanding coverage of healthcare in low-tier hospitals (95% village/community hospitals covered) and emerging markets. Despite it has reached a good MSIC ESG rating of AA, we see it further improving to top notch in ESG management and disclosure.

Satellite Chemical: Last year, the company's MSCI rating was upgraded to B, with clear carbon reduction targets. They conducted carbon reduction assessments and screenings in the supply chain, opting for low-carbon suppliers. These initiatives have empowered business operations, as overseas clients and some enterprises require suppliers to meet ESG standards. ESG performance is further improved through green electricity procurement, steam usage monitoring, and capacity adjustments for self-sufficient steam supply, which also reduces costs and improves efficiency.

BYD: We focused on BYD's conflict mineral sourcing and labour risks in the supply chain, emphasising to management again that BYD's disclosures fall a long way short of international best practice but also domestic peers such as CATL. Raised the issues of longstanding investor concerns about the risk of forced labour in BYD's domestic China operations and much less gently about recent accusations of slavery-type practices in their new Brazil factory and next steps. Brazil: Labour authorities suspend BYD factory construction after finding labour violations among Chinese Jinjiang Construction workers; incl. co. comments - Business & Human Rights Resource Centre IR's responses were weak, outlining how efficient Brazil is, lessons learned there etc. Made it clear that BYD is at risk of being blacklisted internally by some funds, and could be facing similar risks at other international investment firms, if shareholders can't get comfort on some of these issues. Suggested we have a follow-up call with their ESG team to help support improved disclosure efforts in any way we can before this reporting cycle. Suggesting they refer to CATL's reporting should be enough of a hint, but if we can speak their ESG directly about disclosures it would give us another opportunity to raise the more delicate topics of labour risks. IR was amenable to the request but in our experience, they don't allow investors to speak to the ESG team so this is an engagement priority.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable
- ***How did this financial product perform compared with the broad market index?***
Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Asia Pacific Sustainable Equity Fund**

Legal entity identifier **549300VQNI2BMVUKCH84**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 63.49% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 14.37%, ESG Q2: 44.27%, ESG Q3: 40.76%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 10% of issuers with an ESG House Score that are in the benchmark. Application of the binary exclusions and the ESG House-based exclusions resulted in at least 20% of the Fund's investment universe being excluded as at 30 Sept 2025.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 66.67% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating A
- Benchmark rating A

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 10.4%, ESG Q2: 48%, ESG Q3: 33.5%, ESG Q4: 2.3%. The Fund achieved a 30.69% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (A) when compared with the benchmark (A).

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within

tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are

captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFAC	Technology	9.68	Taiwan, Republic of China

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	99.41%	98.65%	98.12%
Sustainable investment	63.49%	61.25%	55.73%
Other environmental	27.27%	30.10%	15.65%
Social	36.23%	31.14%	40.08%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 27.27% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 36.23%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 0.59% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to

consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and

Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also

engaged with issuers on relevant environmental or social topics which include Environment and and Corporate Governance:

HDFC Bank: We engaged with HDFC Bank to encourage improved disclosures around deforestation risk in the bank's agricultural lending activities, discussing the views taken by Forest500 and MSCI towards its perceived environmental impact. We requested a formal deforestation policy, incorporating the relevant soft commodities, and an escalation policy where borrowers don't meet required criteria. To support next steps, we also shared examples of best practice within Emerging Market banks.

Kweichow Moutai: A catch up with Moutai's board secretary and ESG team where we spoke about the company's risk management framework as well as initiatives to address product quality, health and safety, waste management, and carbon footprint. We remain very positive in Moutai's ESG efforts, and are confident that the external impression of the firm will improve. Moutai's efforts to better improve on disclosures will also help to bridge that gap.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable
- ***How did this financial product perform compared with the broad market index?***
Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Asian Credit Opportunities Fund**

Legal entity identifier **2221004DUVC2YZH1DH93**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 45.19% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

ESG Screening Criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG Assessment Criteria: To avoid issuers with poor ESG practices, we apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future.

There are no high risk issuers held in the fund.

ESG Performance: We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the MSCI ESG rating. This is implemented by excluding the bottom 5% of issuers with MSCI ESG rating that are in the benchmark.

We confirm that during the reporting period the Fund achieved a better ESG rating based on MSCI data when compared with the benchmark.

Carbon intensity: We confirm that during the reporting period the portfolio carbon intensity was lower than the benchmark (JACI Diversified), in line with our overall commitment. As at year-end, the fund's weighted average carbon intensity (Scope 1 and 2) relative to the benchmark was 83.93%.

● **...and compared to previous periods?**

During the previous reporting period, the fund did not hold any high risk rating issuers. The screening criteria as applied and there were no holdings in the fund that failed the agreed criteria. The bottom 10% of issuers with a MSCI ESG Rating that are in the benchmark were excluded and for carbon the portfolio performed better than the benchmark, in line with our commitment to target lower carbon intensity relative to the benchmark. We confirmed that during the reporting period the Fund achieved a better ESG rating based on MSCI data when compared with the benchmark and that the Fund focused engagement and analysis on governance and that using the MSCI ESG Rating and the FI Risk Rating, we avoided those companies with the worst governance practices.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

- i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

- ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

- iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.

- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

Period	2025	2024	2022
E/S Characteristics	99.85%	99.35%	98.21%
Sustainable investment	45.19%	47.47%	51.34%
Other environmental	20.89%	23.47%	25.24%
Social	24.30%	23.99%	26.11%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 20.89% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 24.30%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 0.15% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied {include list of sustainability indicators

- ESG screening criteria
- ESG assessment criteria
- a carbon intensity targeting lower than benchmark
- promoting good governance including social factors

to promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, Environment, Labour, Human rights, Corporate Governance and Behaviour.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Asian SDG Equity Fund**

Legal entity identifier **2138001SZMMAO7HILY92**

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ Yes

☒ It made **sustainable investments with an environmental objective**: 43.62%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It made **sustainable investments with a social objective**: 48.63%

☐ No

☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The Fund aimed to achieve long term growth by investing in companies in Asian countries which, in our view, were making a positive contribution to society through their alignment achieving the United Nation's Sustainable Development Goals ('SDGs'). Our SDG proposition focused on companies making a material, intentional, positive contribution to the environment and society. The specific methodology and criteria are outlined within our prospectus and website disclosures. For the relevant Prospectus, see abrdn.com. For the Fund's Sustainable Investment Approach, see abrdn.com. The sustainable development goal strategies invested in companies that make positive and material contributions to environmental and social challenges aligned with at least one of eight impact pillars or are an SDG Enabler. The pillars and associated sub-themes and indicators were developed using the UN SDGs. But above all, we aimed to align our sustainable development objectives with the most pressing global problems according to the UN. Therefore as the needs of the world changed, our impact pillars might evolve. The linkages with the SDG pillars are below: Health & Social Care 19%, Financial Inclusion 11.2%, Sustainable Real Estate & Infrastructure 12.5%, SDG Enablers 20.6%, Sustainable Energy 27.2%, Food & Agriculture 4.6%, Education & Employment 3.5%, Circular Economy 1.4%.

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● **How did the sustainability indicators perform?**

The Fund invested in companies with a minimum of 20% of their revenue, profit, capital or operating expenditure or research and development linked to the UN's SDGs. For companies classified in the benchmark as 'Financials', alternative measures of materiality are used based on loans and customer base. The breakdown of holdings aligned to the SDGs was as below: SDG01 - No poverty 2.31%, SDG02 - Zero Hunger 2.18%, SDG03 - Good Health and Well-Being 16.86%, SDG05- Gender Equality 0.54%, SDG06 - Clean Water and Sanitation 0.09%, SDG07 - Affordable and Clean Energy 17.48%, SDG08 - Decent Work and Economic Growth 11.56%, SDG09 - Industry, Innovation, Infrastructure 30.95%, SDG10 - Reduce Inequalities 1.29%, SDG11 -Sustainable Cities and Communities 1.17%, SDG12 - Responsible Consumption and Production, 0.14%, SDG13 - Climate action, 2.13%, SDG15 - Forestry 2.30%, and SDG 16- Peace, Justice and Strong Institutions 0.41%. The Fund achieved a 40.33% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis). Application of the fund's approach resulted in at least 20% of the Fund's investment universe being excluded as at 30 Sept 2025. Further, key performance indicators (KPIs), or targeted outputs, have been set for each company held in the Fund in order to assess how products and services contribute to positive social and environmental outcomes globally. These KPIs in addition to case studies and additional analysis are reported annually in the Fund's SDG Report. Please see the most recent annual SDG report (available here: abrdn.com) for full discussion on these KPIs as they will vary year by year. We also confirm that during the reporting period, company exclusions are applied to exclude the particular areas of investment related to UN Global Compact, ILO and OECD, Norges Bank Investment Management (NBIM), State Owned Enterprises (SOE), Weapons, Tobacco, Gambling, Alcohol, Thermal Coal, Oil and Gas and Electricity Generation. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

● **...and compared to previous periods?**

In the prevopus period the breakdown of holdings aligned to the SDGs was as below: The breakdown of holdings aligned to the SDGs and to SDG Enablers was as below: SDG01 - No poverty 2.0%, SDG02 - Zero Hunger 1.5%, SDG03 - GoodHealth and Well-Being 20.4%, SDG06 - Clean Water and Sanitation 0.0%, SDG07 - Affordable and Clean Energy 28.0%, SDG08 - Decent Work and Economic Growth 12.1%, SDG09 -Industry, Innovation, Infrastructure 13.8%, SDG10 - Reduce Inequalities 0.0%, SDG11 -Sustainable Cities and Communities 3.3%, SDG12 - Responsible Consumption and Production, 0.0%, SDG13 - Climate action, 2.3%, SDG15 - Forestry 2.3%, and SDG Enabler 11.5%.The Fund achieved a 71.61% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis).

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon

emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFAC	Technology	9.70	Taiwan, Republic of China
SAMSUNG ELECTRONICS-PREF	Technology	3.94	Korea (South)

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The fund committed to hold a minimum of 80% in Sustainable Investments, including a minimum commitment of 15% to assets with an environmental objective and 15% to social objectives. The Fund invests a maximum of 20% of assets in the "Non Sustainable" category, which is mainly made up of cash, money market instruments and derivatives. The chart below shows the sustainable investments expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments

Period	2025	2024	2022
Sustainable investment	92.25%	95.94%	98.43%
Other environmental	43.62%	49.03%	39.21%
Social	48.63%	46.92%	59.22%

● ***In which economic sectors were the investments made?***

Sector	Sub-sector	% Assets
Technology	Tech Hardware & Semiconductors	20.88
Health Care	Health Care	16.63
Industrials	Industrial Products	7.79
Real Estate	Real Estate	7.66
Consumer Discretionary	Consumer Discretionary Products	6.27
Communications	Telecommunications	5.19

Consumer Staples	Retail & Wholesale - Staples	2.92
Unclassified	Unclassified	1.90
Materials	Materials	1.64
Communications	Media	1.47
Energy	Renewable Energy	1.36
Financials	Financial Services	0.64

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 22/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 43.62% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 48.63%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 7.75% of assets in the "not sustainable" category. The investments included are cash, money market instruments, and may also include derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to attain the sustainable investment objective during the reference period?

Diverse SDG Exposure:

We aim to invest in companies whose products and services align with one of our eight impact pillars and measure how the businesses help countries achieve the UN's sustainable development agenda. During the reference period we had holdings exposed to all eight of our impact pillars, fulfilling our goal of offering broad access to the SDG.

Monitoring companies' continued alignment with the SDGs:

We aim to review the companies in the investable universe at least annually. Companies will be removed from the investable universe if:

- The company begins to pursue a strategy that does not align to one of our impact pillars.
- Red flags, controversies and/or incidents emerge that highlight a persistent, structural ESG problem within the company's operations, strategy or culture, to which the company does not appropriately respond. Aberdeen's SDG Management Group is the governing body that reviews new investment opportunities. This Group peer reviews all new candidates for the impact fund and its investable universe. The Group meets weekly and includes the Sustainable Development funds' portfolio managers, analysts from across our global and regional equity teams, and senior members of the Investment Sustainability Group. In order for a company to be included in the investable universe, consensus must be reached by the Group.

Company self-disclosure is a crucial part of our approach to SDG investing. We believe that if a company intends to deliver a product to address a specific environmental or social need, the impact must be reported. Therefore we heavily rely on engagement with companies and our conversations with the supervisory board, executive management teams, and divisional heads.

Engagement examples from the past year have included:

BYD: We focused on BYD's conflict mineral sourcing and labour risks in the supply chain, emphasising to management again that BYD's disclosures fall a long way short of international best practice but also domestic peers such as CATL. Raised the issues of longstanding investor concerns about the risk of forced labour in BYD's domestic China operations and much less gently about recent accusations of slavery-type practices in their new Brazil factory and next steps. Brazil: Labour authorities suspend BYD factory construction after finding labour violations among Chinese Jinjiang Construction workers; incl. co. comments - Business & Human Rights Resource Centre IR's responses were weak, outlining how efficient Brazil is, lessons learned there etc. Made it clear that BYD is at risk of being blacklisted internally by some funds, and could be facing similar risks at other international investment firms, if shareholders can't get comfort on some of these issues. Suggested we have a follow-up call with their ESG team to help support improved disclosure efforts in any way we can before this reporting cycle. Suggesting they refer to CATL's reporting should be enough of a hint, but if we can speak their ESG directly about disclosures it would give us another opportunity to raise the more delicate topics of labour risks. IR was amenable to the request but in our experience, they don't allow investors to speak to the ESG team so this is a engagement priority.

Samsung Biologics: Management reiterated their expectation for MSCI upgrade to BBB by YE25 following considerable efforts to improve disclosures around social and governance matters flagged in the tearsheet. They called out enhancements around Samsung Biologics' human capital efforts to better support training and recruitment, also ethics management, board reporting and oversight. Reiterated our request for the separation of Chairman and CEO to mirror steps taken at SEC, and continue to upskill the BoD.

Aptus: Management explained that it's easy to hire but that employees will rotate between companies in the industry. We discussed sales KPIs which are essential to the business' ability to retain talent. In the past, culture was that everyone needs to push hard and grow for instance 20% every quarter. A lot of undue pressure by branch and cluster managers on new joiners. This led attrition. Management explained branch managers now are learning soft skills to help/handhold new joiners, and to have patience to teach. Proper education/training systems in place for first 2 months. Retention scheme bonuses were also announced, where new employees are rewarded if they manage to stay for at least 6 months with good m/m performance. Attrition rate is around 20-30% which is an improvement. For the Risk underwriting team there have not been any changes to KPI. For the credit team, understanding of cash flows and whether to take it forward is key. They will report to another head of credit rather than the branch manager and their incentives are not disbursements and volumes. Right now, credit team is going through technological enhancement. Initially, credit person in the branch will have to meet up with the borrower to understand their cash flows and business model, utilize the account aggregator to understand bank statements, etc. and type all of these into a manual form. However, the sales team are now equipped with a video recording capability where transcripts of the discussion are noted down, of which HQ can key these in and disburse it from HQ side, reducing the need for the credit officer to go down to the site several times just to get facts recorded down. These will reduce some costs and most importantly improve efficiencies. We also touched on management KPIs which are what they indicated previously and aligned with the business model, i.e. AUM and disbursement growth targets.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Asian Smaller Companies Fund**

Legal entity identifier **549300KGE8BU4DTSR888**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46.01% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 3.28%, ESG Q2: 18.98%, ESG Q3: 77.41%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 68.97% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating BBB
- Benchmark rating BBB

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 0.0%, ESG Q2: 34.3%, ESG Q3: 55.8%. The Fund achieved a 77.75% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (BBB) when compared with the benchmark (BBB).

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
J.B. CHEMICALS & PHARMA LTD	Health Care	2.97	India
CHOLAMANDALAM FINANCIAL HOLD	Industrials	2.81	India
CHROMA ATE INC	Industrials	2.73	Taiwan, Republic of China
CLASSYS INC	Health Care	2.70	Korea (South)

ZHEJIANG SHUANGHUAN DRIVEL-A	Consumer Discretionary	1.97	China

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	99.68%	98.96%	98.28%
Sustainable investment	46.01%	50.10%	48.66%
Other environmental	15.76%	15.69%	19.73%
Social	30.25%	34.42%	28.93%

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Technology	Software & Tech Services	12.08
Real Estate	Real Estate	11.31
Health Care	Health Care	9.58
Industrials	Industrial Products	9.36
Technology	Tech Hardware & Semiconductors	9.26
Consumer Staples	Consumer Staple Products	8.72
Industrials	Industrial Services	7.77
Materials	Materials	5.41
Consumer Discretionary	Retail & Whsle - Discretionary	4.81
Consumer Discretionary	Consumer Discretionary Products	4.61

Financials	Financial Services	3.07
Communications	Media	2.52
Energy	Oil & Gas	2.26
Unclassified	Unclassified	1.82
Communications	Telecommunications	1.35
Financials	Insurance	1.01
Consumer Staples	Retail & Wholesale - Staples	0.89
Utilities	Utilities	0.88

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 15.76% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 30.25%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 0.32% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Corporate Governance and Climate Change:

Park Systems: IR took on board the need to disclose in English to improve their MSCI ESG ranking which is impacted due to lack of disclosure. They have also set up a remcom and are aiming to disclose ESG and sustainability information on the website. Part of the rationale for relocating HQ is to improve energy efficiency - something that is not currently shared on the website or annual report. They were not aware that PS had been rated at all by MSCI and seemed shocked by the CCC rating. We have recommended they try to engage directly with MSCI to try and improve this rating through improved communications and disclosures.

Makalot: We commended the company for their improving disclosure that has led to MSCI BBB rating. For Makalot, ESG is critical to maintain/grow business with their clients. Child labour/safety standards/human rights - are non-negotiables that must be implemented for example with zero tolerance. Environmental is an ongoing improvement that differentiates themselves for their clients (who have high ESG improvement) with every brand having carbon reduction targets etc. Makalot is working to provide them with real time transparency/accuracy that will continue to raise their profile/premium. Governance is less of a risk for clients due to the long association/trust. For investors - rating agencies look at many things and for Makalot, it is about filling in gaps/improving disclosure including things they do not do. For example, they do not use animal fur, have never had the need to disclose what they don't do. However, for rating agencies you have to specify. Hence they are confident they can continue to improve their standing with rating agencies.

Chief Telecom: We discussed mgmt. compensation and incentives, where there is a general concern that Chief might function similar to Chunghwa, where the government influence leads to lower visibility. However, Mr Chiang argued that as a subsidiary, gov. has barely any influence, and when looking into the mgmt. team and divisional heads, no one comes from the parent company, and they have full operating independence. Moreover, he detailed that mgmt.'s KPIs are based in 5 pillars: Revenue Growth, Profit Growth, New Customer attraction, ISO Certifications and ESG.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable
- ***How did this financial product perform compared with the broad market index?***
Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - China A Share Sustainable Equity Fund**

Legal entity identifier **5493008HYR8SEZ4NF058**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.08% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 14.11%, ESG Q2: 27.64%, ESG Q3: 56.47%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 10% of issuers with an ESG House Score that are in the benchmark. Application of the binary exclusions and the ESG House-based exclusions resulted in at least 20% of the Fund's investment universe being excluded as at 30 Sept 2025.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 65.46% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating BBB

- Benchmark rating BBB

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 0.5%, ESG Q2: 27.4%, ESG Q3: 54.1%. The Fund achieved a 70.78% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved an ESG rating based on MSCI data of BBB when compared with the benchmark BBB.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and

abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable

investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

Period	2025	2024	2022
E/S Characteristics	98.22%	96.35%	96.90%
Sustainable investment	61.08%	56.26%	50.25%
Other environmental	25.40%	29.08%	20.96%
Social	35.68%	27.18%	29.29%

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Consumer Discretionary	Consumer Discretionary Products	22.59
Industrials	Industrial Products	14.32
Financials	Banking	11.82
Consumer Staples	Consumer Staple Products	10.80
Technology	Tech Hardware & Semiconductors	9.71
Health Care	Health Care	6.85
Financials	Insurance	5.61
Utilities	Utilities	4.14
Financials	Financial Services	3.77
Materials	Materials	3.46
Unclassified	Unclassified	2.61
Industrials	Industrial Services	1.50

Technology	Software & Tech Services	0.98
Consumer Staples	Retail & Wholesale - Staples	0.77
Energy	Renewable Energy	0.73
Consumer Discretionary	Retail & Whsle - Discretionary	0.33

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 25.40% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 35.68%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 1.78% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, and Corporate Governance:

Mindray: We had an engagement with Mindray to understand their efforts being made in ESG practices and disclosures. Mindray is ambitious in strengthening their disclosures in carbon emission (scope 3 in development), product safety (redesigned product safety process) and talent management (global coverage of training & benefits), while invests heavily in expanding coverage of healthcare in low-tier hospitals (95% village/community hospitals covered) and emerging markets. Despite it has reached a good MSIC ESG rating of AA, we see it further improving to top notch in ESG management and disclosure.

BYD: We focused on BYD's conflict mineral sourcing and labour risks in the supply chain, emphasising to management again that BYD's disclosures fall a long way short of international best practice but also domestic peers such as CATL. Raised the issues of longstanding investor concerns about the risk of forced labour in BYD's domestic China operations and much less gently about recent accusations of slavery-type practices in their new Brazil factory and next steps. Brazil: Labour authorities suspend BYD factory construction after finding labour violations among Chinese Jinjiang Construction workers; incl. co. comments - Business & Human Rights Resource Centre IR's responses were weak, outlining how efficient Brazil is, lessons learned there etc. Made it clear that BYD is at risk of being blacklisted internally by some funds, and could be facing similar risks at other international investment firms, if shareholders can't get comfort on some of these issues. Suggested we have a follow-up call with their ESG team to help support improved disclosure efforts in any way we can before this reporting cycle. Suggesting they refer to CATL's reporting should be enough of a hint, but if we can speak their ESG directly about disclosures it would give us another opportunity to raise the more delicate topics of labour risks. IR was amenable to the request but in our experience, they don't allow investors to speak to the ESG team so this is a engagement priority.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● *How does the reference benchmark differ from a broad market index?*

Not applicable

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - China Onshore Bond Fund**

Legal entity identifier **549300NWSVV4LHMGP25**

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ **X** No

X It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 13.86% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

X with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

X with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation or jurisdiction, and/or products

and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management, increased renewable energy usage, and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – effectively tackled corruption and inequality, promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, encouraged healthy relationships with communities, promoted social cohesion and integration, and encouraged investment in human capital.

Benchmark

This Fund had a financial benchmark that was used as a comparator for Fund performance. However, this benchmark was not used as a reference point for portfolio construction or for the purpose of attaining ESG characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Screening Criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG Assessment Criteria (corporate and SOE issuers): To avoid issuers with poor ESG practices, we apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future.

There are no high risk issuers held in the fund.

ESGP Performance (sovereign issuers): We confirm that during the reporting period the Fund has assessed all sovereign debt positions against the proprietary ESGP framework.

ESG Performance (corporate and SOE issuers): We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the MSCI ESG rating. This is implemented by excluding the bottom 5% of issuers with MSCI ESG rating that are in the benchmark.

● ***...and compared to previous periods?***

N/A - No Previous report

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including:

(1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal

coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

Largest Investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 67% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 33% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Government	Sovereigns	59.61
Government	Government Development Banks	17.11
Financials	Banking	11.96
Utilities	Power Generation	5.35
Utilities	Utilities	3.65
Unclassified	Unclassified	2.31

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

The fund holds 0% investments made in transitional and enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.12% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 9.73%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 33% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied {include list of sustainability indicators

- ESG screening criteria
- ESG assessment criteria
- promoting good governance including social factors

to promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● *How does the reference benchmark differ from a broad market index?*

Not applicable

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

● *How did this financial product perform compared with the reference benchmark?*

Not applicable

● ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Climate Transition Bond Fund**

Legal entity identifier **2138001IN6XY2E88UX09**

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ Yes

☒ It made **sustainable investments with an environmental objective**: 79.46%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It made **sustainable investments with a social objective**: 3.83%

☐ No

☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The Climate Transition Bond Fund sought to achieve attractive long-term returns by investing at least 90% of the assets in fixed-income securities that supported the transition to a low-carbon economy and society's adaptation to climate change.

The Fund drew on Aberdeen's deep resources and understanding of climate and environmental issues to help our clients benefit from the long-term shift towards greater sustainability. We aimed to achieve a combination of income and growth by investing in bonds issued by companies and countries that, in our view, were addressing the causes of climate change and adapted to its consequences.

These were companies that were lowering green-house-gas (GHG) emissions of their operations or helped others to reduce their emissions, and companies and countries that were helping society adapt to the physical risks of climate change.

The Fund used three key pillars to identify and acknowledge climate-change risks and opportunities. We set out these pillars below, showing how they linked to sustainable objectives around climate change.

- Leaders – the leading emission reducing companies (climate change mitigation)
- Adaptors – issuers improved resilience to the physical risks of climate change (climate change adaptation)
- Solutions – issuers helped the wider economy decarbonise (climate change mitigation)

Fund exposure to the pillars:

- Leaders – 39%
- Adaptors – 11%
- Solutions – 50%

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● **How did the sustainability indicators perform?**

The Fund invested in companies aligned to the three pillars. The breakdown of holdings aligned to the pillars:

- Leaders – 39%
- Adaptors – 11%
- Solutions – 50%

We also confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco, Gambling, Alcohol, Adult entertainment, Oil and Gas extraction, and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria

● **...and compared to previous periods?**

Fund exposure to the pillars:- Leaders – 31%- Adaptors – 13%- Solutions – 56%

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm (“Do No Significant Harm”/ “DNSH”) to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) “do no significant harm”. Pass indicates under Aberdeen’s methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen’s approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.

- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 80% in Sustainable Investments, including a minimum commitment of 79% to assets with an environmental objective and 4% to social objectives. The Fund invests a maximum of 20% of assets in the "Non Sustainable" category, which is mainly made up of cash, money market instruments and derivatives. The chart below shows the sustainable investments expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments

Period	2025	2024	2022
Sustainable investment	83.29%	87.93%	87.24%
Other environmental	79.46%	81.97%	78.45%
Social	3.83%	5.96%	8.78%

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Utilities	Utilities	24.49
Utilities	Power Generation	9.01
Financials	Real Estate	8.55
Industrials	Railroad	7.83
Real Estate	Real Estate	5.06

Communications	Wireline Telecommunications Services	0.17
Industrials	Waste & Environment Services & Equipment	0.13
Energy	Refining & Marketing	0.13

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives) .

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● What was the share of investments made in transitional and enabling activities?

The fund holds 0% investments made in transitional and enabling activities.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 79.46% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 3.83%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 16.71% of assets in the “not sustainable” category. The investments included are cash, money market instruments, and may also include derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to attain the sustainable investment objective during the reference period?

Diverse climate transition exposure:

We aim to invest in companies whose products and services align with one of our climate transition pillars.

During the reference period we had holdings exposed to all three climate transition pillars.

Monitoring company progress:

We aim to review the companies in the Fund at least annually. Companies are removed from the investable universe if:

- The company begins to pursue a strategy that does not align to one of our climate transition pillars.
- Red flags, controversies and/or incidents emerge that highlight a persistent, structural ESG problem within the company's operations, strategy or culture, to which the company does not appropriately respond.

Engagement:

For Climate Transition Bond Fund, engagement priorities will include review engagements to follow up on milestones previously set; enhance engagements to gain more information regarding the company's climate transition strategy; response engagements if there have been specific ESG news flow pertaining to the companies and thematic engagements where there is cross-over with broader Aberdeen engagement thematic priorities. Some examples over the year include:

Enel Chile, May 2025: Enel continues to expand its share of GHG-free production, now achieving a levelised cost of energy of around \$45/MWh, compared to \$60-70/MWh for fossil fuels. Enel is expanding its battery storage capacity from 2GW to 3.2GW over the next three years. The company plans to close its remaining coal plants in Europe by 2027, although delays may occur due to changes in tone from Italian government in recent months. Conversely, the Spanish Government's decision to prolong nuclear generation may hugely benefit Endesa business.

Lenzing, May 2025: Lenzing is forecasting strong demand growth for wood-based textiles, driven by homeware and new technologies for activewear. They are prioritising Lyocell due to its superior properties and have added capacity for its production. Challenges remain in achieving 100% FSC certification, but they are committed to enhanced due diligence across their forestry supply chain. Interesting developments in their Glacial Threads Project highlights their efforts to address climate change by placing plant-based Lyocell fabric over glaciers to reduce melting whilst reducing microplastic pollution.

Suzano, June 2025: This was an incredibly reassuring call with Suzano. We met with them in response to a handful of local news outlets accusing them of using controversial land repossession practices. Suzano were open and transparent throughout, providing detailed context around the situation in Maranhão, where professional land grabbers have illegally occupied conservation land. The company outlined their successful legal and social efforts to reclaim the land responsibly, including support for displaced individuals and the use of trained, unarmed security. They are working with third parties to assist with rehousing and we have asked them to consider a third-party audit to further enhance transparency here —something we would view as a very positive step.

WeSoda, June 2025: We Soda produce soda ash with the lowest carbon dioxide equivalent (“CO2e”) emissions intensity and water intensity. The focus of the meeting was primarily on a significant acquisition in the US and

how it will not affect overall ESG credentials. There is still some concern on related party transactions, but the company is reducing over time.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Diversified Growth Fund**

Legal entity identifier **549300A4JW2X86C61F78**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 35.66% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

No benchmark was used for portfolio construction or as a basis for setting risk constraints in the management of the Fund or for attaining the abovementioned characteristics promoted by the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

ESG screening criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG assessment by asset class:

Listed alternative investment companies

We confirm that the Fund only owned companies with an ESG score of 1-4. As at year-end, 10% of listed alternative investment companies had an ESG score of 1, 45% had an ESG score of 2, 41% had an ESG score of 3 and 4% had an ESG score of 4.

Credit

This is credit profile-specific and represents how impactful they believe ESG risks are likely to be to the credit quality of the issuer now and in the future. The key area of focus is the materiality of the inherent environmental and social risks of the sector of operation and how specific companies manage these risks, combined with the quality and sustainability of its corporate governance. This materiality assessment is combined with a judgement on the timeframe over which these ESG risks may have an impact. Our analysts utilise an ESG Risk Rating Framework to support making these assessments. This is a proprietary tool designed to help focus the knowledge and expertise of credit analysts in a systematic way to substantiate the overall ESG Risk Rating assigned to debt issuers.

Our proprietary ESG House Score is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period, the Fund excluded companies with a High ESG Risk Rating where the governance assessment was the primary driver of the overall rating. Additionally, we confirm that we excluded the bottom 5% of issuers with lowest ESG House Score.

Emerging Market Debt (EMD)

We apply our proprietary ESGP framework – where ‘P’ are the political factors. This produces a relative quantitative score for each country from 0-100 (higher is better), which is calculated by combining a variety of data inputs related to Environmental, Social, Governance and Political pillars. Following standardisation of data points and adjusting for GDP per capita, the overall ESGP score for each country is calculated as an equally weighted average of each pillar. ESGP analysis is an integral part of the investment process, and the Fund commits to exclude the bottom 15% of countries within the ESGP framework, with investable sovereign bonds or bonds issued by state owned enterprises (SOEs). In addition, for each country in the ESGP universe,

a Direction of Travel (DoT) indicator is assigned based on our internal assessment of whether a country is on an improving or deteriorating ESG trend, with each country being assigned a Positive, Negative or Neutral DoT indicator. Where a country sits in the bottom 15% of the ESGP universe but is assigned a Positive DoT indicator, it is re-included in the permissible investment universe. We confirm that no sovereign issuers in the bottom 15%, with a Negative or Neutral DoT indicator, were held in the fund.

Developed Market Government Bonds

Within this Fund the approach for Developed Market government bonds results in the exclusion of holdings relating to countries that in Aberdeen's view present more intense ESG risks. On an annual basis countries are ranked according to ESG factors which are aligned with the UN Sustainable Development Goals (SDGs). The Fund Investment Approach excludes countries in the bottom 25% of that ranking from our DM government bond allocation. We confirm that no bonds in the bottom 25% of that ranking were held during the reporting period.

Global REITs

We confirm that the Fund only owned companies with an ESG Quality Rating of 1-4. We also confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 20% of companies that are in the benchmark based on the ESG House Score across each of the three regions: (1) UK & Europe, (2) APAC Including Japan, (3) US & Canada.

Equity Passive (QIS tracker)

The Fund Investment Approach includes a portfolio ESG score at least 110% of benchmark (Aberdeen and MSCI), carbon footprint (Aberdeen definition of Scope 1 + 2) of 50% of benchmark and green revenues of 150% of benchmark. This is measured at the point of every quarterly rebalance. We confirm that the Fund complied with these 3 metrics during the reporting period.

● **...and compared to previous periods?**

ESG screening criteria were met last year. For listed alternatives, 9% of investment companies had an ESG score of 1, 46% had a score of 2, 37% had a score of 3, and 7% had a score of 4.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration

investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.

- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological

weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

Largest Investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024
E/S Characteristics	97.72%	97.98%
Sustainable investment	35.66%	34.37%
Other environmental	21.18%	20.36%
Social	14.48%	14.01%

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 21% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 14%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 2% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied ESG Screening Criteria and ESG Assessment by asset class to promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics. Examples include:

We engaged with Foresight Environmental Infrastructure Ltd (FGEN) following media scrutiny of biomass sustainability, particularly concerns around Drax’s use of virgin wood. While FGEN wasn’t named, we sought clarity on its sourcing and sustainability practices. Management confirmed over 95% of feedstock is local waste wood, with long-term supply agreements and on-site storage. Emissions are tracked using GHG Protocol and PCAF, benchmarked against fossil fuels. FGEN highlighted biomass’s role as a reliable baseload complement to intermittent renewables. We were satisfied with the transparency and differentiation from criticised practices, and will continue monitoring policy developments and re-engage if needed.

We engaged with HarbourVest Global Private Equity (HVPE), a \$3.9bn listed private equity trust, to address concerns around capital allocation and governance following an activist letter to the board. Our aim was to encourage more proactive management of the trust, which has underperformed peers in recent years. We requested a meeting with the Chairman and Senior NED to discuss buybacks, simplification of the investment structure, and board alignment. HVPE had initiated a capital allocation process in 2024, but actions remained modest relative to its size. In response to shareholder feedback, the board agreed to double the buyback pool, increase direct investments, and hold a continuation vote in 2026. These steps signal a commitment to narrowing the discount to NAV, improving shareholder returns, and enhancing long-term performance. We will continue to monitor HVPE’s evolution and positioning within the listed private equity space.

How did this financial product perform compared to the reference benchmark?

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Diversified Income Fund**

Legal entity identifier **549300XT276EOJ765R93**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 33.94% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

No benchmark was used for portfolio construction or as a basis for setting risk constraints in the management of the Fund or for attaining the abovementioned characteristics promoted by the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG screening criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG assessment by asset class:

Listed alternative investment companies

We confirm that the Fund only owned companies with an ESG score of 1-4. As at year-end, 10% of listed alternative investment companies had an ESG score of 1, 45% had an ESG score of 2, 41% had an ESG score of 3 and 4% had an ESG score of 4.

Credit

This is credit profile-specific and represents how impactful they believe ESG risks are likely to be to the credit quality of the issuer now and in the future. The key area of focus is the materiality of the inherent environmental and social risks of the sector of operation and how specific companies manage these risks, combined with the quality and sustainability of its corporate governance. This materiality assessment is combined with a judgement on the timeframe over which these ESG risks may have an impact. Our analysts utilise an ESG Risk Rating Framework to support making these assessments. This is a proprietary tool designed to help focus the knowledge and expertise of credit analysts in a systematic way to substantiate the overall ESG Risk Rating assigned to debt issuers.

Our proprietary ESG House Score is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period, the Fund excluded companies with a High ESG Risk Rating where the governance assessment was the primary driver of the overall rating. Additionally, we confirm that we excluded the bottom 5% of issuers with lowest ESG House Score.

Emerging Market Debt (EMD)

We apply our proprietary ESGP framework – where ‘P’ are the political factors. This produces a relative quantitative score for each country from 0-100 (higher is better), which is calculated by combining a variety of data inputs related to Environmental, Social, Governance and Political pillars. Following standardisation of data points and adjusting for GDP per capita, the overall ESGP score for each country is calculated as an equally weighted average of each pillar. ESGP analysis is an integral part of the investment process, and the Fund commits to exclude the bottom 15% of countries within the ESGP framework, with investable sovereign bonds or bonds issued by state owned enterprises (SOEs). In addition, for each country in the ESGP universe,

a Direction of Travel (DoT) indicator is assigned based on our internal assessment of whether a country is on an improving or deteriorating ESG trend, with each country being assigned a Positive, Negative or Neutral DoT indicator. Where a country sits in the bottom 15% of the ESGP universe but is assigned a Positive DoT indicator, it is re-included in the permissible investment universe. We confirm that no sovereign issuers in the bottom 15%, with a Negative or Neutral DoT indicator, were held in the fund.

Developed Market Government Bonds

Within this Fund the approach for Developed Market government bonds results in the exclusion of holdings relating to countries that in Aberdeen's view present more intense ESG risks. On an annual basis countries are ranked according to ESG factors which are aligned with the UN Sustainable Development Goals (SDGs). The Fund Investment Approach excludes countries in the bottom 25% of that ranking from our DM government bond allocation. We confirm that no bonds in the bottom 25% of that ranking were held during the reporting period.

Global REITs

We confirm that the Fund only owned companies with an ESG Quality Rating of 1-4. We also confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 20% of companies that are in the benchmark based on the ESG House Score across each of the three regions: (1) UK & Europe, (2) APAC Including Japan, (3) US & Canada.

Equity Passive (QIS tracker)

The Fund Investment Approach includes a portfolio ESG score at least 110% of benchmark (Aberdeen and MSCI), carbon footprint (Aberdeen definition of Scope 1 + 2) of 50% of benchmark and green revenues of 150% of benchmark. This is measured at the point of every quarterly rebalance. We confirm that the Fund complied with these 3 metrics during the reporting period.

● **...and compared to previous periods?**

ESG screening criteria were met last year. For listed alternatives, 9% of investment companies had an ESG score of 1, 46% had a score of 2, 37% had a score of 3, and 7% had a score of 4.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration

investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.

- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological

weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024
E/S Characteristics	96.75%	97.62%
Sustainable investment	33.94%	33.12%
Other environmental	20.45%	19.59%
Social	13.49%	13.53%

● **In which economic sectors were the investments made?**

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 20% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 13%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 3% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied ESG Screening Criteria and ESG Assessment by asset class to promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics. Examples include:

We engaged with Foresight Environmental Infrastructure Ltd (FGEN) following media scrutiny of biomass sustainability, particularly concerns around Drax’s use of virgin wood. While FGEN wasn’t named, we sought clarity on its sourcing and sustainability practices. Management confirmed over 95% of feedstock is local waste wood, with long-term supply agreements and on-site storage. Emissions are tracked using GHG Protocol and PCAF, benchmarked against fossil fuels. FGEN highlighted biomass’s role as a reliable baseload complement to intermittent renewables. We were satisfied with the transparency and differentiation from criticised practices, and will continue monitoring policy developments and re-engage if needed.

We engaged with HarbourVest Global Private Equity (HVPE), a \$3.9bn listed private equity trust, to address concerns around capital allocation and governance following an activist letter to the board. Our aim was to encourage more proactive management of the trust, which has underperformed peers in recent years. We requested a meeting with the Chairman and Senior NED to discuss buybacks, simplification of the investment structure, and board alignment. HVPE had initiated a capital allocation process in 2024, but actions remained modest relative to its size. In response to shareholder feedback, the board agreed to double the buyback pool, increase direct investments, and hold a continuation vote in 2026. These steps signal a commitment to narrowing the discount to NAV, improving shareholder returns, and enhancing long-term performance. We will continue to monitor HVPE’s evolution and positioning within the listed private equity space.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social

● **How does the reference benchmark differ from a broad market index?**

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Emerging Markets Bond Fund**

Legal entity identifier **549300BA33Y94QDNRN64**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 25.02% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management, increased renewable energy usage, and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – effectively tackled corruption and inequality, promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, encouraged healthy relationships with communities, promoted social cohesion and integration, and encouraged investment in human capital.

Benchmark

This Fund used the JP Morgan EMBI Global Diversified Index as a financial benchmark. The benchmark was also used as a reference point for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining ESG characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria: We apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future.

There are no high risk issuers held in the fund. Therefore, all issuers pass the good governance check.

ESG screening criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG Assessment Criteria: We apply our proprietary ESGP framework – where ‘P’ are the political factors. This produces a relative quantitative score for each country from 0-100 (higher is better), which is calculated by combining a variety of data inputs related to Environmental, Social, Governance and Political pillars. Following standardisation of data points and adjusting for GDP per capita, the overall ESGP score for each country is calculated as an equally weighted average of each pillar. ESGP analysis is an integral part of the investment process, and the Fund commits to exclude the bottom 5% of countries within the ESGP framework. In addition, for each country in the ESGP universe, a Direction of Travel (DoT) indicator is assigned based

on our internal assessment of whether a country is on an improving or deteriorating ESG trend, with each country being assigned a Positive, Negative or Neutral DoT indicator. Where a country sits in the bottom 5% of the ESGP universe but is assigned a Positive DoT indicator, it is included in the permissible investment universe, with an additional name falling into the bottom 5% to replace it. We confirm that no sovereign issuers in the bottom 5% were held in the fund.

Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector.

We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 5% of issuers with an ESG House Score that are in the benchmark.

● ***...and compared to previous periods?***

During the previous reporting period, there were 1 high ESG risk issuer held in the fund, however this issuer is not high risk due to governance issues. Therefore, since all issuers pass the good governance check, the fund was able to invest in this name. The screening criteria as applied and there were no holdings in the fund that failed the agreed criteria. The bottom 5% of issuers with an ESG House Score that are in the benchmark were excluded and the portfolio performed better than the benchmark, in line with our commitment to target lower carbon intensity relative to the benchmark.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and

therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.

- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 67% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 33% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

Period	2025	2024
E/S Characteristics	95.11%	96.37%
Sustainable investment	25.02%	31.12%
Other environmental	7.48%	7.37%
Social	17.54%	23.75%

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Government	Sovereigns	73.02
Communications	Media	12.27
Industrials	Industrial Products	9.11

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives) .

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.48% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 17.54%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 4.89% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied ESG assessment criteria including:

- ESG performance (Corporate Issuers)
- ESGP performance (Sovereign Issuers)
- Avoid poor ESG practices (Corporate & State-Owned Enterprise Issuers)
- Screening Criteria These criteria promote Environmental & Social characteristics.

In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, Environment, Labour, Human rights, Corporate Behaviour and Corporate Governance.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Emerging Markets Corporate Bond Fund**

Legal entity identifier **549300D7984IRKAKI626**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 39.21% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

ESG Assessment Criteria: We apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future. There is 1 high risk issuers held in the fund, which is a Russian bank that we are unable to trade in due to sanctions so cannot exit the position. We continue to review this position.

ESG screening criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector.

We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Carbon intensity: We confirm that during the reporting period the portfolio carbon intensity was lower than the benchmark (JPM Corporate EMBI Broad Diversified), in line with our overall commitment. As at year-end, the fund's weighted average carbon intensity (Scope 1 and 2) relative to the benchmark was 89.85%.

Good governance: We confirm that during the reporting period the Fund focused engagement and analysis on governance and that we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

During the previous reporting period, there were 2 high risk due to governance issuers held in the fund. Both of these could not be traded at the time of the previous report. The screening criteria as applied and there were no holdings in the fund that failed the agreed criteria. The bottom 5% of issuers with an ESG House Score that are in the benchmark were excluded and the portfolio performed better than the benchmark, inline with our commitment to target lower carbon intensity relative to the benchmark.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

- i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

- ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

- iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.

- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 22/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.87% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 22.34%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 4.82% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied ESG assessment criteria including:

- ESG assessment criteria,
- ESG screening criteria,
- a carbon intensity targeting lower than benchmark,
- promoting good governance including social factors. These criteria promote Environmental & Social characteristics. In addition, the fund committed to consider the specified PAIs. The fund has also engaged with

issuers on relevant environmental or social topics which include Climate change, Environment, Labour, Human rights,

Corporate Behaviour and Corporate Governance.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***

- ***How did this financial product perform compared with the broad market index?***
Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Emerging Markets Equity Fund**

Legal entity identifier **549300VBMTVFH73MX846**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.43% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 16.83%, ESG Q2: 39.36%, ESG Q3: 39.10%, ESG Q4: 3.89%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 62.29% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating A
- Benchmark rating A

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 14.37%, ESG Q2: 44.27%, ESG Q3: 40.76%. The Fund achieved a 34.26% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (A) when compared with the benchmark (A). Period 2025 2024 2023

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFAC	Technology	9.64	Taiwan, Republic of China
TENCENT HOLDINGS LTD	Communications	8.19	China
ALIBABA GROUP HOLDING LTD	Consumer Discretionary	4.27	China

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

Period	2025	2024	2022
E/S Characteristics	99.17%	98.55%	98.57%
Sustainable investment	61.43%	61.78%	57.29%
Other environmental	29.44%	31.86%	16.39%
Social	31.99%	29.92%	40.90%

In which economic sectors were the investments made?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- operational expenditure (Opex) reflecting green operational activities of investee companies.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● What was the share of investments made in transitional and enabling activities?

The fund holds 0% investments made in transitional and enabling activities.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 29.44% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 31.99%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 0.83% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, Environment, and Corporate Governance:

Mindray: We had an engagement with Mindray to understand their efforts being made in ESG practices and disclosures. Mindray is ambitious in strengthening their disclosures in carbon emission (scope 3 in development), product safety (redesigned product safety process) and talent management (global coverage of training & benefits), while invests heavily in expanding coverage of healthcare in low-tier hospitals (95% village/community hospitals covered) and emerging markets. Despite it has reached a good MSIC ESG rating of AA, we see it further improving to top notch in ESG management and disclosure.

Korea Offshore Shipbuilding: We drafted and sent an email to Mr. Kijong Sung, Executive Vice President (EVP) of KSOE to reach out regarding (1) instituting a clear and consistent annual div policy, e.g. to set a baseline annual div, (2) committing to a meaningfully increased div payout ratio through the cycle, (3) initiating a share buyback initiative, (4) introducing ROE and TSR as a key metric in the determination of executive remuneration.

HDFC Bank: We engaged with HDFC Bank to encourage improved disclosures around deforestation risk in the bank’s agricultural lending activities, discussing the views taken by Forest500 and MSCI towards its perceived environmental impact. We requested a formal deforestation policy, incorporating the relevant soft commodities, and an escalation policy where borrowers don’t meet required criteria. To support next steps, we also shared examples of best practice within Emerging Market banks.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 12.09%, ESG Q2: 34.21%, ESG Q3: 48.49%, ESG Q4: 4.28%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 10% of issuers with an ESG House Score that are in the benchmark. Application of the binary exclusions and the ESG House-based exclusions resulted in at least 20% of the Fund's investment universe being excluded as at 30 Sept 2025.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 26.65% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating A
- Benchmark rating A

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 11.5%, ESG Q2: 48.5%, ESG Q3: 35.9%, ESG Q4: 0.0%. The Fund achieved an 18.37% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved an ESG rating based on MSCI data of A when compared with the benchmark A.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within

tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are

captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFAC	Technology	9.82	Taiwan, Republic of China

INDIAN HOTELS CO LTD	Consumer Discretionary	1.71	India

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	99.07%	98.02%	98.73%
Sustainable investment	63.42%	66.86%	64.58%
Other environmental	27.54%	35.74%	21.32%
Social	35.88%	31.12%	43.25%

● ***In which economic sectors were the investments made?***

Sector	Sub-sector	% Assets
Technology	Tech Hardware & Semiconductors	22.87
Financials	Banking	16.40
Industrials	Industrial Products	9.32
Materials	Materials	6.81
Financials	Financial Services	5.86

Health Care	Health Care	2.24
Financials	Insurance	1.91
Communications	Media	1.88
Consumer Staples	Consumer Staple Products	1.77
Unclassified	Unclassified	1.76
Consumer Staples	Retail & Wholesale - Staples	1.45

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 27.54% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 35.88%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 0.93% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, and Corporate Governance.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Emerging Markets Income Equity Fund**

Legal entity identifier **213800VCEJLGPIWHKG19**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 55.10% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 13.60%, ESG Q2: 34.49%, ESG Q3: 41.40%, ESG Q4: 9.4%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 64.13% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating A
- Benchmark rating A

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

N/A - No Previous report

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and

therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024
E/S Characteristics	98.95%	98.23%
Sustainable investment	55.10%	57.87%
Other environmental	25.64%	26.86%
Social	29.46%	31.01%

● ***In which economic sectors were the investments made?***

Consumer Staples	Retail & Wholesale - Staples	0.53

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 25.64% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 29.46%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 1.05% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Labour, and Corporate Governance:

ELF Beauty: Labor/Employee engagement - comp model is cash light/equity heavy, with equity being granted to every employee every year. We asked about employee morale since the stock has been on a decline since June, and management acknowledged that it has been tough for employees but believes their culture of transparency is working for them. Weekly townhalls are held to discuss the business and what's driving the stock price, and employees understand their roles and how they can drive improvement over the long-term. Change the Board - ELF's board is 78% women and 44% diverse, and the company has launched the Change the Board initiative to promote diversity in board rooms. Bringing awareness and education is a large part of the initiative, but they've also partnered with the NACD (National Association of Corporate Directors) to sponsor 20 candidates to prepare for US boards. Overall they've been pleased with the positive consumer response.

Merit Medical: We focused on succession planning but were provided with no further colour on Joe Wright's departure (former President's and likely successor to Fred Lampropoulous) beyond the press release but confirmed it was a board decision. Fred Lampropoulous (Chairman & CEO)'s contract expires at the end of 2025 but will likely sit on the Board for 2 years. Board "will do what is necessary" i.e. Fred will stay in role longer if needed as they want to get the succession planning right rather than just getting him out of the door. Board will run the process to find his replacement and is looking at internal and external candidates, but no information was provided re the type of skill/experience they are looking for.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Emerging Markets SDG Corporate Bond Fund**

Legal entity identifier **213800ZA6YFUJIKUV566**

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ ☒ **X** Yes

☒ It made **sustainable investments with an environmental objective**: 37.21%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It made **sustainable investments with a social objective**: 52.15%

☐ ☐ **No**

☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

SDG: The Fund aimed to achieve long term growth by investing in companies in Emerging Market countries which, in our view, will make a positive contribution to society through their alignment achieving the United Nation's Sustainable Development Goals ('SDGs').

Our SDG proposition focused on companies making a material, positive contribution to the environment and society.

The specific methodology and criteria were outlined within our prospectus and website disclosures, which were available at the Aberdeen Group plc -> fund centre.

The sustainable development goal strategies invested in companies that made positive and material contributions to environmental and social challenges aligned with at least one of 8 pillars or were an SDG Leader or SDG Transition issue. The pillars and associated sub-themes and indicators were developed using the UN SDGs. But above all, we aimed to align our sustainable development objectives with the

most pressing global problems according to the UN.

Therefore as the needs of the world changed, our impact pillars might have evolved. The linkages with the SDGs were illustrated in the table below.

Cash - 5.45%

Circular Economy - 2.79%

Financial Inclusion - 29.86%

Food & Agriculture - 5.91%

Frontier Sovereign - 7.61%

Health & Social Care - 3.18%

Sustainable Energy - 12.00%

Sustainable Real Estate & Infrastructure - 26.55%

Water & Sanitation - 2.62%

SDG Transition - 1.45%

SDG Enabler- 2.58%

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● **How did the sustainability indicators perform?**

The Fund invested in companies with a minimum of 20% of their revenue, profit, capital or operating expenditure or research and development linked to the UN's SDGs. For companies classified in the benchmark as 'Financials', alternative measures of materiality are used based on loans and customer base.

The breakdown of holdings aligned to the SDGs, SDG leaders and SDG Transition issues was:

1. No Poverty - 15.33%

2. Zero Hunger - 3.05%

3. Good Health & Well-Being - 6.02%

6. Clean Water & Sanitation - 2.62%

7. Affordable & Clean Energy - 12.48%

8. Decent Work & Economic Growth - 13.48%

9. Industry, Innovation & Infrastructure - 23.13%

11. Sustainable Cities & Communities - 1.96%

12. Responsible Consumption & Production - 0.89%

15. Life on Land - 3.95%

Frontier Sovereign -7.61%

SDG Leaders 2.58%

SDG Transition 1.45%

Cash 5.45%

Carbon intensity: We confirm that during the reporting period the portfolio carbon intensity was lower than the benchmark (JP Morgan ESG CEMBI Broad Diversified Index), in line with our overall commitment. As at year-end, the fund's weighted average carbon intensity (Scope 1 and 2) was lower than the benchmark.

The positive screening process refines the universe further. Further, key performance indicators (KPIs), or targeted outputs, have been set for each company held in the Fund in order to assess how products and services contribute to positive social and environmental outcomes globally. These KPIs in addition to case studies and additional analysis are reported annually in the Fund'

s SDG Report. Please see the most recent report (available at Aberdeen Group Plc website-> fund centre) for full discussion on these KPIs as they will vary year by year.

We also confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, ILO and OECD, State Owned Enterprises (SOE), Tobacco, Thermal Coal, Oil & Gas, Electricity Generation, Gambling, Alcohol, Adult Entertainment and Weapons. These screening criteria apply in a binding manner.

● **...and compared to previous periods?**

For the previous period, the breakdown of holdings aligned to the SDGs, SDG leaders and SDG Transition issues was: 1. No Poverty - 13.94% 2. Zero Hunger - 2.25% 3. Good Health & Well-Being - 5.65% 6. Clean Water & Sanitation - 2.36% 7. Affordable & Clean Energy - 15.47% 8. Decent Work & Economic Growth - 11.89% 9. Industry, Innovation & Infrastructure - 26.98% 11. Sustainable Cities & Communities - 2.46% 12. Responsible Consumption & Production - 0.82% 15. Life on Land - 3.83% 17. Partnership for the Goals - 6.11% SDG Leaders 2.55% SDG Transition 1.34% Cash 4.25%

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 80% in Sustainable Investments, including a minimum commitment of 37% to assets with an environmental objective and 52% to social objectives. The Fund invests a maximum of 20% of assets in the "Non Sustainable" category, which is mainly made up of cash, money market instruments and derivatives. The chart below shows the sustainable investments expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments

Period	2025	2024	2022
Sustainable investment	89.36%	94.78%	99.50%
Other environmental	37.21%	39.14%	41.97%
Social	52.15%	55.64%	57.53%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 37.21% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 52.15%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 10.64% of assets in the "not sustainable" category. The investments included are cash, money market instruments, and may also include derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to attain the sustainable investment objective during the reference period?

Diverse SDG Exposure:

We aim to invest in companies whose products and services align with one of our eight impact pillars and measure how the businesses help countries achieve the UN's sustainable development agenda. During the reference period we had holdings exposed to all eight of our impact pillars, fulfilling our goal of offering broad access to the SDG.

Monitoring company progress in achieving SDG alignment:

We aim to review the companies in the Fund at least annually. Companies are removed from the investable universe if:

- The company begins to pursue a strategy that does not align to one of our impact pillars.
- The company does not provide sufficient evidence of improved disclosure over what we would consider an appropriate timeline.
- Red flags, controversies and/or incidents emerge that highlight a persistent, structural ESG problem within the company's operations, strategy or culture, to which the company does not appropriately respond.

Engagement:

For these SDG Fund, engagement priorities will include engagements designed to encourage companies to follow a path to impact. We will work with companies to better understand how they allocate capital to the areas of under-investment highlighted by the UN SDGs. We will look to encourage better disclosure of this capital

allocation process and measurement of positive contribution. Some examples over the year include:

Lenzing, May 2025: Lenzing is forecasting strong demand growth for wood-based textiles, driven by homeware and new technologies for activewear. They are prioritising Lyocell due to its superior properties and have added capacity for its production. Challenges remain in achieving 100% FSC certification, but they are committed to enhanced due diligence across their forestry supply chain. Interesting developments in their Glacial Threads Project highlights their efforts to address climate change by placing plant-based Lyocell fabric over glaciers to reduce melting whilst reducing microplastic pollution.

IHS Holding, May 2025: IHS Holdings has been making significant progress, as highlighted in their 2024 sustainability report, which focuses on four pillars. This follows their 'Project Green' initiative launched in 2022, with a \$209 million spend through 2024, aimed at reducing diesel reliance. They reported an 11% reduction in scope 1 and 2 emissions, achieving a 20% reduction from their baseline, ahead of their 30% target by 2026. However, electricity consumption increased by 7% over the last year. IHS is pushing for electrification improvements in Nigeria but is uncertain about the immediate cost benefits. They continue to enhance their reporting standards, acknowledging challenges in meeting some targets but remain committed to their 2026 goals. Health and safety remain a priority, with three contractor fatalities in 2024. They provide training and review incidents to improve safety procedures. Reporting on road traffic accidents has increased for transparency. Despite high staff turnover, they maintain a solid hiring rate and continue business optimization. Digital inclusion is a growth area, with 400 sites being built in rural Brazil. IHS aims to manage debt, with 77% in hard currencies, focusing on paying down high-interest debt first. They face challenges with high debt payback rates in Nigeria and Brazil but view public debt as a cheaper option.

Axian Telecome, April 2025: Axian continue to show impressive leader in terms of integrating sustainability. This collaborative engagement via EMIA focused on their climate transition strategy. They have ambitious SBTi-aligned decarbonisation targets by 2030, including for Scope 3, that are part of management compensation. Key drivers of this will be installing own renewable energy, engaging with core suppliers and maximising energy efficiency in data centres. They are also involved in external groups including the GSMA Climate Action Taskforce and UNGC Climate Ambition Accelerator programme.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- **How did the reference benchmark differ from a broad market index?**

Not applicable

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Emerging Markets SDG Equity Fund**

Legal entity identifier **213800G9VXZZAEETMY47**

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ Yes

☒ It made **sustainable investments with an environmental objective**: 42.84%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It made **sustainable investments with a social objective**: 51.53%

☐ No

☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The Fund aimed to achieve long term growth by investing in companies in Emerging Market countries which, in our view, were making a positive contribution to society through their alignment achieving the United Nation's Sustainable Development Goals ('SDGs'). Our SDG proposition focused on companies making a material, intentional, positive contribution to the environment and society. The specific methodology and criteria are outlined within our prospectus and website disclosures. For the relevant Prospectus, see abrdn.com. For the Fund's Sustainable Investment Approach, see abrdn.com. The sustainable development goal strategies invested in companies that make positive and material contributions to environmental and social challenges aligned with at least one of eight impact pillars or are an SDG Enabler. The pillars and associated sub-themes and indicators were developed using the UN SDGs. But above all, we aimed to align our sustainable development objectives with the most pressing global problems according to the UN. Therefore as the needs of the world changed, our impact pillars might evolve. The linkages with the SDG pillars are below: Health & Social Care 12.3%, Financial Inclusion 19.9%, Sustainable Real Estate & Infrastructure 12.4%, SDG Enablers 17.2%, Sustainable

Sustainability indicators measure how the sustainable objectives of this financial product are attained

● **How did the sustainability indicators perform?**

The Fund invested in companies with a minimum of 20% of their revenue, profit, capital or operating expenditure or research and development linked to the UN's SDGs. For companies classified in the benchmark as 'Financials', alternative measures of materiality are used based on loans and customer base. The breakdown of holdings aligned to the SDGs was as below: SDG01 - No poverty 5.49%, SDG02 - Zero Hunger 2.40%, SDG03 - Good Health and Well-Being 11.63%, SDG05- Gender Equality 0.52%, SDG06 - Clean Water and Sanitation 2.19%, SDG07 - Affordable and Clean Energy 16.45%, SDG08 - Decent Work and Economic Growth 13.58%, SDG09 - Industry, Innovation, Infrastructure 32.95%, SDG10 - Reduce Inequalities 2.14%, SDG11 -Sustainable Cities and Communities 1.6%, SDG12 - Responsible Consumption and Production, 0.6%, SDG13 - Climate action, 2.33%, SDG15 - Forestry 0.90%, and SDG 16- Peace, Justice and Strong Institutions 0.28%. The Fund achieved a 60.87% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis). Application of the fund's approach resulted in at least 20% of the Fund' s investment universe being excluded as at 30 Sept 2025. Further, key performance indicators (KPIs), or targeted outputs, have been set for each company held in the Fund in order to assess how products and services contribute to positive social and environmental outcomes globally. These KPIs in addition to case studies and additional analysis are reported annually in the Fund's SDG Report. Please see the most recent annual SDG report (available here: abrdn.com) for full discussion on these KPIs as they will vary year by year. We also confirm that during the reporting period, company exclusions are applied to exclude the particular areas of investment related to UN Global Compact, ILO and OECD, Norges Bank Investment Management (NBIM), State Owned Enterprises (SOE), Weapons, Tobacco, Gambling, Alcohol, Thermal Coal, Oil and Gas and Electricity Generation. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

● **...and compared to previous periods?**

In the previous period the breakdown of holdings aligned to the SDGs and to SDG Enablers was as below:: SDG01 - No poverty 4.4%, SDG02 - Zero Hunger 1.5%, SDG03 - Good Health and Well-Being 17.0%, SDG06 - Clean Water and Sanitation 0.0%, SDG07 - Affordable and Clean Energy 20.8%, SDG08 - Decent Work and Economic Growth 16.0%, SDG09 -Industry, Innovation, Infrastructure 11.5%, SDG10 - Reduce Inequalities 0.0%, SDG11 -Sustainable Cities and Communities 1.2%, SDG12 - Responsible Consumption and Production, 0.9%, SDG13 - Climate action, 3.9%, SDG15 - Forestry 1.0%, and SDG Enabler 19.9%.The Fund achieved a 78.89% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon

emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFAC	Technology	9.80	Taiwan, Republic of China

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The fund committed to hold a minimum of 80% in Sustainable Investments, including a minimum commitment of 15% to assets with an environmental objective and 15% to social objectives. The Fund invests a maximum of 20% of assets in the "Non Sustainable" category, which is mainly made up of cash, money market instruments and derivatives. The chart below shows the sustainable investments expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments

Period	2025	2024	2022
Sustainable investment	94.38%	98.23%	98.38%
Other environmental	42.84%	45.81%	32.67%
Social	51.53%	52.42%	65.72%

● ***In which economic sectors were the investments made?***

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 42.84% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 51.53%

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 5.62% of assets in the "not sustainable" category. The investments included are cash, money market instruments, and may also include derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to attain the sustainable investment objective during the reference period?

Diverse SDG Exposure:

We aim to invest in companies whose products and services align with one of our eight impact pillars and measure how the businesses help countries achieve the UN's sustainable development agenda. During the reference period we had holdings exposed to all eight of our impact pillars, fulfilling our goal of offering broad access to the SDG.

Monitoring companies' continued alignment with the SDGs:

We aim to review the companies in the investable universe at least annually. Companies will be removed from the investable universe if:

- The company begins to pursue a strategy that does not align to one of our impact pillars.
- Red flags, controversies and/or incidents emerge that highlight a persistent, structural ESG problem within the company's operations, strategy or culture, to which the company does not appropriately respond. Aberdeen's SDG Management Group is the governing body that reviews new investment opportunities. This Group peer reviews all new candidates for the impact fund and its investable universe. The Group meets weekly and includes the Sustainable Development funds' portfolio managers, analysts from across our global and regional equity teams, and senior members of the Investment Sustainability Group. In order for a company to be included in the investable universe, consensus must be reached by the Group.

Company self-disclosure is a crucial part of our approach to SDG investing. We believe that if a company intends to deliver a product to address a specific environmental or social need, the impact must be reported. Therefore we heavily rely on engagement with companies and our conversations with the supervisory board, executive management teams, and divisional heads.

Engagement examples from the past year have included:

HDFC Bank: We engaged with HDFC Bank to encourage improved disclosures around deforestation risk in the bank's agricultural lending activities, discussing the views taken by Forest500 and MSCI towards its perceived environmental impact. We requested a formal deforestation policy, incorporating the relevant soft commodities, and an escalation policy where borrowers don't meet required criteria. To support next steps, we also shared examples of best practice within Emerging Market banks.

BYD: We focused on BYD's conflict mineral sourcing and labour risks in the supply chain, emphasising to management again that BYD's disclosures fall a long way short of international best practice but also domestic peers such as CATL. Raised the issues of longstanding investor concerns about the risk of forced labour in BYD's domestic China operations and much less gently about recent accusations of slavery-type practices in their new Brazil factory and next steps. Brazil: Labour authorities suspend BYD factory construction after finding labour violations among Chinese Jinjiang Construction workers; incl. co. comments - Business & Human Rights Resource Centre IR's responses were weak, outlining how efficient Brazil is, lessons learned there etc. Made it clear that BYD is at risk of being blacklisted internally by some funds, and could be facing similar risks at other international investment firms, if shareholders can't get comfort on some of these issues. Suggested we have a follow-up call with their ESG team to help support improved disclosure efforts in any way we can before this reporting cycle. Suggesting they refer to CATL's reporting should be enough of a hint, but if we can speak their ESG directly about disclosures it would give us another opportunity to raise the more delicate topics of labour risks. IR was amenable to the request but in our experience, they don't allow investors to speak to the ESG team so this is an engagement priority.

Equatorial Energia: Discussed physical climate risk management since Rio Grande do Sul had an estimated 16 climate events last year, a rate of more than one per month. The steep learning curve means EQTL now has the dubious honour of being one of the most experienced utilities companies in contending with climate events and has expedited its response time. Unsurprisingly the capex plan at this concession has been delayed and discussions are ongoing. There was a reassuring message from Equatorial management as they prioritize climate event resiliency in the network following the impacts from floodings in the south. This is an area the company paid attention to but taking a more active stance and engaging with the regulator to address this via improving incentives into the framework. Outside of above takeaways, on the Governance of SABESP remain in contact but separate teams covering sustainability. Likely to remain that way, given non-controlled entity. We discussed culture again at the company, and how a lack of controller lets everyone who works there have a degree of ownership. This has led them to take decision without worries of dilution where they see returns in excess of this. A real life example of this is when they won Goias ahead of Energisa (who are controlled), turned out to be stellar return. We spent a long period of the meeting discussing the compensation structure of employees; and how this drives alignment with shareholder returns with all parts of the organisation having variable pay aligned to growth/quality improvements.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial

● How did the reference benchmark differ from a broad market index?

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Emerging Markets Smaller Companies Fund**

Legal entity identifier **5493003RH9AJFHA5QI62**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ ☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 49.08% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 1.44%, ESG Q2: 16.86%, ESG Q3: 78.39%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 74.26% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating BBB
- Benchmark rating BBB

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 3.5%, ESG Q2: 36%, ESG Q3: 54.6%. The Fund achieved a 78.25% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (BBB when compared with the benchmark (BBB)).

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
YANTAI CHINA PET FOODS CO-A	Consumer Staples	3.06	China
TAIWAN UNION TECHNOLOGY CORP	Technology	2.98	Taiwan, Republic of China

NEWGEN SOFTWARE TECHNOLOGIES	Technology	1.99	India

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

Period	2025	2024	2022
E/S Characteristics	98.03%	97.85%	96.69%
Sustainable investment	49.08%	49.08%	51.96%
Other environmental	16.40%	15.76%	19.07%
Social	32.68%	33.32%	32.89%

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Industrials	Industrial Products	14.69
Industrials	Industrial Services	11.55
Health Care	Health Care	10.17
Technology	Tech Hardware & Semiconductors	8.96
Consumer Discretionary	Consumer Discretionary Products	6.82
Communications	Media	6.72
Financials	Financial Services	6.52
Technology	Software & Tech Services	6.22
Real Estate	Real Estate	5.65
Consumer Discretionary	Retail & Whsle - Discretionary	5.53
Consumer Staples	Consumer Staple Products	4.99

Materials	Materials	2.99
Consumer Discretionary	Consumer Discretionary Services	2.68
Financials	Insurance	2.07
Unclassified	Unclassified	1.83
Financials	Banking	1.48
Consumer Staples	Retail & Wholesale - Staples	0.80
Utilities	Utilities	0.34

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (Opex) reflecting green

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

operational activities of investee companies.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 22/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.40% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 32.68%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 1.97% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, and Corporate Governance:

Korea Offshore Shipbuilding: We drafted and sent an email to Mr. Kijong Sung, Executive Vice President (EVP) of KSOE to reach out regarding (1) instituting a clear and consistent annual div policy, e.g. to set a baseline annual div, (2) committing to a meaningfully increased div payout ratio through the cycle, (3) initiating a share buyback initiative, (4) introducing ROE and TSR as a key metric in the determination of executive remuneration.

Makalot: We commended the company for their improving disclosure that has led to MSCI BBB rating. For Makalot, ESG is critical to maintain/grow business with their clients. Child labour/safety standards/human rights - are non-negotiables that must be implemented for example with zero tolerance. Environmental is an ongoing improvement that differentiates themselves for their clients (who have high ESG improvement) with every brand having carbon reduction targets etc. Makalot is working to provide them with real time transparency/accuracy that will continue to raise their profile/premium. Governance is less of a risk for clients due to the long association/trust. For investors - rating agencies look at many things and for Makalot, it is about filling in gaps/improving disclosure including things they do not do. For example, they do not use animal fur, have never had the need to disclose what they don't do. However, for rating agencies you have to specify. Hence they are confident they can continue to improve their standing with rating agencies.

360 One Wam LTD: We talked about the tax investigation or “search” that the authorities did of 360's office a couple of weeks back. These tax raids are not uncommon (Prestige Estates has been the latest one) but they are not frivolous. The scale of the search was pretty comprehensive and requires government approvals at a very high level. They believe the trigger might have been the investigation into gold loan activities (dealt in cash) by the IIFL Group and since they were an associated entity until recently (ex-promoters are still classified as promoters for the time being while they re-classify them), that is possibly why they were included in the scope of the work. The search felt like an enhanced audit exercise but the good news is that the discussions were more around technical matters rather than anything specific to any client or insinuation of tax evasion etc. 360 doesn't really offer offshore vehicles (this was shut down in 2017-8) or shell structures that would open them up to those kinds of risks that plagued the Swiss banks back in the day. In any case the authorities will come back with any findings on the technical matters in several months time at which point 360 can also appeal if there are any issues.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● *How does the reference benchmark differ from a broad market index?*

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Emerging Markets Total Return Bond Fund**

Legal entity identifier **549300JXPP31Y2967B52**

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 29.57% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation or jurisdiction, and/or products

and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management, increased renewable energy usage, and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – effectively tackled corruption and inequality, promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, encouraged healthy relationships with communities, promoted social cohesion and integration, and encouraged investment in human capital.

Benchmark

The Fund did not use a benchmark as a reference point for portfolio construction or for the purpose of attaining ESG characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

ESG Assessment Criteria: We apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future.

There are no high risk issuers held in the fund. Therefore, all issuers pass the good governance checkk.

ESG screening criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG Assessment Criteria: We apply our proprietary ESGP framework – where ‘P’ are the political factors. This produces a relative quantitative score for each country from 0-100 (higher is better), which is calculated by combining a variety of data inputs related to Environmental, Social, Governance and Political pillars. Following standardisation of data points and adjusting for GDP per capita, the overall ESGP score for each country is calculated as an equally weighted average of each pillar. ESGP analysis is an integral part of the investment process, and the Fund commits to exclude the bottom 5% of countries within the ESGP framework. In addition, for each country in the ESGP universe, a Direction of Travel (DoT) indicator is assigned based on our internal assessment of whether a country is on an improving or deteriorating ESG trend, with each country being assigned a Positive, Negative or Neutral DoT indicator. Where a country sits in the bottom 5% of the ESGP universe but is assigned a Positive DoT indicator, it is included in the permissible investment universe, with an additional name falling into the bottom 5% to replace it. We confirm that no sovereign issuers in the bottom 5% were held in the fund.

Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector.

We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 5% of issuers with an ESG House Score that are in the benchmark.

● **...and compared to previous periods?**

N/A - No Previous report

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.

- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 67% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 33% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Government	Sovereigns	72.03
Energy	Oil & Gas	3.69
Financials	Banks	2.99
Industrials	Railroad	2.71
Energy	Integrated Oils	2.30
Energy	Exploration & Production	2.24
Unclassified	Unclassified	1.94
Government	Government Development Banks	1.58
Materials	Metals & Mining	1.22

Energy	Renewable Energy	0.12

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives) .

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- operational expenditure (Opex) reflecting green operational activities of investee companies.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

The fund holds 0% investments made in transitional and enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.94% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 21.62%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 33% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied ESG assessment criteria including:

- ESG performance (Corporate Issuers)
- ESGP performance (Sovereign Issuers)
- Avoid poor ESG practices (Corporate & State-Owned Enterprise Issuers)
- Screening Criteria These criteria promote Environmental & Social characteristics.

In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, Environment, Labour, Human rights, Corporate Behaviour and Corporate Governance.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**
Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Euro High Yield Bond Fund**

Legal entity identifier **549300Q9GK10S7HFDF57**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 30.79% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG screening criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG Performance: Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according

to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Avoiding Poor ESG Business Practices: We apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future. There are no high risk issuers held in the fund. Therefore, all issuers pass the good governance check.

● ***...and compared to previous periods?***

During the previous reporting period, the fund held 1 high risk rating issuer which has been subsequently exited. The screening criteria as applied and there were no holdings in the fund that failed the agreed criteria. The bottom 5% of issuers with an ESG House Score that are in the benchmark were excluded.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to

supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for

multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

Largest Investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 67% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 33% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024
E/S Characteristics	97.87%	96.19%
Sustainable investment	30.79%	31.63%
Other environmental	16.80%	14.75%
Social	13.99%	16.88%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.8% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 14%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 2% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied ESG assessment criteria including:

- ESG assessment criteria
- ESG screening criteria,
- a carbon intensity targeting lower than the benchmark,
- promoting good governance including social factors. These criteria promote Environmental & Social characteristics. In addition, the fund committed to consider the PAIs within the investment process. The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, Environment, Labour, Human rights and Corporate Governance.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● ***How does the reference benchmark differ from a broad market index?***

Not applicable

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

● ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Europe ex UK Sustainable Equity Fund**

Legal entity identifier **549300D74Z5SB5ZIUN31**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ ☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46.18% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

However, using our proprietary research framework, we aimed to promote the below characteristics within this fund, although a broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 5.96%, ESG Q2: 76.15%, ESG Q3: 16.35%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 10% of issuers with an ESG House Score that are in the benchmark. Application of the binary exclusions and the ESG House-based exclusions resulted in at least 20% of the Fund's investment universe being excluded as at 30 Sept 2025.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 36.67% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating AA
- Benchmark rating AA

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 12%, ESG Q2: 73%, ESG Q3: 15%. The Fund achieved a 81.86% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (AA) when compared with the benchmark (AA).

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within

tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are

captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.

- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.

- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	98.46%	99.50%	99.13%
Sustainable investment	46.18%	57.28%	45.73%
Other environmental	18.50%	20.73%	19.54%
Social	27.67%	36.56%	26.18%

● ***In which economic sectors were the investments made?***

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 18.50% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 27.67%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 1.54% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied its criteria around ESG scores, ESG Screening and Carbon Intensity to promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Governance, Human Rights and Climate Change. Examples include:

L'Oreal: We engaged with L'Oreal on a handful of key ESG topics including Climate Change, Deforestation, Human Rights, Plastic and Packaging and Animal Welfare. Overall L'Oreal is sector leading with their management of ESG issues, and stands out for its approach to Human Rights. They are working to comply with European directives on Deforestation by the end of 2025 and have good traceability to the mill level. However in some areas such as packaging the ambitious targets L'Oreal has set look difficult to achieve unless the wider recycled infrastructure and ecosystem is able to keep up. Overall the meeting supports our current assessment of L'Oreal as an ESG leader.

Azelis: We discussed the EQT board members. Sensed some friction from IR about their presence on the board alongside them not setting clear timelines for divestment. The IR also confirmed that principals are required to disclose PFAS exposure by 2025. AZE pre-empted this by actively reformulating for customers and provides opportunity for incremental revenue. IR will follow up with actual numbers.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - European Sustainable Equity Fund**

Legal entity identifier **549300S9LZDBGNKR0127**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 51.80% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 5.22%, ESG Q2: 83.13%, ESG Q3: 11.34%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 10% of issuers with an ESG House Score that are in the benchmark. Application of the binary exclusions and the ESG House-based exclusions resulted in at least 20% of the Fund's investment universe being excluded as at 30 Sept 2025.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 42% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating AA
- Benchmark rating AA

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 11%, ESG Q2: 77%, ESG Q3: 12%. The Fund achieved a 80.94% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (AA) when compared with the benchmark (AA).

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within

tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are

captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
ASML HOLDING NV	Technology	5.40	Netherlands
SAP SE	Technology	5.14	Germany
RELX PLC	Industrials	4.88	United Kingdom

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	99.69%	99.57%	98.13%
Sustainable investment	51.80%	60.56%	48.26%
Other environmental	16.42%	21.48%	19.46%
Social	35.39%	39.08%	28.79%

● ***In which economic sectors were the investments made?***

Sector	Sub-sector	% Assets
Financials	Financial Services	16.49
Health Care	Health Care	12.05
Consumer Staples	Consumer Staple Products	11.65
Industrials	Industrial Products	10.28
Materials	Materials	8.36
Financials	Insurance	8.27
Technology	Software & Tech Services	7.78
Technology	Tech Hardware & Semiconductors	7.39
Industrials	Industrial Services	5.27

Communications	Media	2.84
Financials	Banking	1.85
Energy	Oil & Gas	0.92
Consumer Staples	Retail & Wholesale - Staples	0.90
Consumer Discretionary	Consumer Discretionary Services	0.55
Unclassified	Unclassified	0.52

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.42% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 35.39%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 0.31% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied its criteria around ESG scores, ESG Screening and Carbon Intensity to promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Governance, Human Rights and Climate Change. Examples include:

L'Oreal: We engaged with L'Oreal on a handful of key ESG topics including Climate Change, Deforestation, Human Rights, Plastic and Packaging and Animal Welfare. Overall L'Oreal is sector leading with their management of ESG issues, and stands out for its approach to Human Rights. They are working to comply with European directives on Deforestation by the end of 2025 and have good traceability to the mill level. However in some areas such as packaging the ambitious targets L'Oreal has set look difficult to achieve unless the wider recycled infrastructure and ecosystem is able to keep up. Overall the meeting supports our current assessment of L'Oreal as an ESG leader.

Air Liquide: We talked about the number of different types of projects industrial gas companies are getting involved in to help with the energy transition outside of purely producing low carbon hydrogen. That included decarbonising the cement industry through use of oxygen and carbon capture, alongside carbon capture of their existing facilities.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Future Minerals Fund**

Legal entity identifier **549300J6LKERHANY5698**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46.13% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts, and promoted the efficient use and extraction of raw materials whilst seeking to maximise opportunities for a circular economy.

Social – promoted good labour practices and relations, maximised employee health and safety, and strengthened supply chain management.

Benchmark

No benchmark was used for portfolio construction or as a basis for setting risk constraints in the management of the Fund. The Fund referenced the MSCI ACWI Index (USD) as an indicative comparator of the long-term performance of the Future Minerals theme against global equities. The Fund did not aim to outperform this index, and it was not used for portfolio construction or risk management purposes. Furthermore, the index did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 5.06%, ESG Q2: 41.69%, ESG Q3: 43.25%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 5% of issuers with an ESG House Score that are in the benchmark.

We confirm that all holdings met Future Minerals theme defined as companies with a minimum of 20% of their current or forecast revenue, profit, assets, capital expenditure linked to one of the following pillars

- Mineral extraction & processing: metals and mining companies with raw mineral exposure that clean energy technologies are reliant upon
- Upstream & downstream value chain: machinery and services that enable the clean energy transition and mineral conversion into clean energy products (e.g. electric vehicle battery makers)

- Recycling & sustainability: minerals and metals extraction from waste for re-use
- Compounds & advanced materials: other material producing companies that support the clean energy transition

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: Q2 43%, Q3 48%, Q4 9%.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- a quantitative methodology based on a combination of publicly available data sources; and
- using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and

abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable

investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.

- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.

- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
LINDE PLC	Materials	4.78	United States of America
Freeport-McMoRan Inc	Materials	4.70	United States of America
AIR LIQUIDE SA	Materials	4.67	France

MP MATERIALS CORP	Materials	3.47	United States of America

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024
E/S Characteristics	98.92%	99.59%
Sustainable investment	46.13%	49.79%
Other environmental	30.18%	34.55%
Social	15.96%	15.25%

● ***In which economic sectors were the investments made?***

Sector	Sub-sector	% Assets
Materials	Materials	81.95
Industrials	Industrial Products	8.49
Consumer Discretionary	Consumer Discretionary Products	6.47
Industrials	Industrial Services	2.10
Unclassified	Unclassified	0.99

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 30.18% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 15.96%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 1.08% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Environment, Climate change, Human Rights and Corporate Governance:

Teck Resources: The company has been adapting their organisational structure, trying to get a mindset of collective accountability across the firm rather than individual's narrow objective. This should help drive better transparency across the business and in particular foster an environment for employees to flag issues sooner.

Weir Group: Despite the change in political environment miners remain focussed on ESG (especially the S) given they require buy in from communities in order to get permitting, and they won't get that with a poor reputation. Weir can facilitate water and particularly energy consumption reduction given grinding is the most energy intensive part of the mining value chain. Still need to create a win-win on the economics and the ESG criteria but management they can't have a successful product with one and not the other.

Nexgen Energy: Indigenous groups nearby to the Arrow deposit are on board with the project thanks to the economic activity that will come as a result, there is no real local economy. NexGen is investing in schools, providing kids breakfasts, running scholarships etc., but seeing this as a 'band-aid' for the real issues which will be addressed with the mine coming into development . They plan to have local businesses set-up, and employment at the mine. 500 of the 4.5k natives participated in a training program last year - 500 more scheduled for this year. One of the nations is taking regulator to court for delaying the project timeline.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Global Corporate Sustainable Bond Fund**

Legal entity identifier **213800WIYPEVSD685504**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 52.72% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Avoiding Poor ESG Business Practices We apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future. There are no high risk issuers held in the fund. Therefore, all issuers pass the good governance check.

ESG screening criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG Performance: Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according

to how material they are for each sector.

We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 10% of issuers with an ESG House Score that are in the benchmark.

● **...and compared to previous periods?**

During the previous reporting period, the fund did not hold any high risk rating issuers. The screening criteria as applied and there were no holdings in the fund that failed the agreed criteria. The bottom 10% of issuers with an ESG House Score that are in the benchmark were excluded.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to

supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for

multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	98.95%	97.32%	98.87%
Sustainable investment	52.72%	46.21%	36.46%
Other environmental	31.20%	27.90%	16.47%
Social	21.52%	18.31%	19.99%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 31.20% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 21.52%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 1.05% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied ESG assessment criteria including:

- ESG performance (Corporate Issuers)
- Avoid poor ESG practices (Corporate & State-Owned Enterprise Issuers)
- Screening Criteria These criteria promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and

2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change,

Environment, Labour, Human rights, Corporate Behaviour and Corporate Governance.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Global High Yield Sustainable Bond Fund**

Legal entity identifier **213800USPMOYN564PL94**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 44.96% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

However, using our proprietary research framework, we aimed to promote the below characteristics within this Fund, although a broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – promoted sound energy management and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG assessment criteria: We apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future. There are no high risk issuers held in the fund. Therefore, all issuers pass the good governance check.

ESG Screening Criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG performance: Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 5% of issuers with an ESG House Score that are in the benchmark.

● ***...and compared to previous periods?***

N/A - No Previous report

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the

investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary

devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024
E/S Characteristics	96.56%	94.91%
Sustainable investment	44.96%	40.78%
Other environmental	19.97%	17.92%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 19.97% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 24.99%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 3.44% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied ESG assessment criteria including:

- ESG performance (Corporate Issuers)
- Avoid poor ESG practices (Corporate & State-Owned Enterprise Issuers)
- Screening Criteria These criteria promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and

2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, Environment, Labour, Human rights, Corporate Behaviour and Corporate Governance.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable
- ***How did this financial product perform compared with the broad market index?***
Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Global Infrastructure Equity Fund**

Legal entity identifier **21380011DCQP38JX3E26**

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 70.60% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 1.11%, ESG Q2: 40.22%, ESG Q3: 56.50%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 5% of issuers with an ESG House Score that are in the benchmark.

We confirm that at least 70% of the Fund's assets were invested in companies with minimum of 20% of their revenue or investment linked to the United Nations Sustainable Development Goals.

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● ***...and compared to previous periods?***

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to

sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
ENBRIDGE INC	Energy	3.31	Canada
FERROVIAL SE	Industrials	3.28	United States of America
NORFOLK SOUTHERN CORP	Industrials	3.18	United States of America
WILLIAMS COS INC	Energy	3.12	United States of America
NEXTERA ENERGY INC	Utilities	3.07	United States of America
KINDER MORGAN INC	Energy	2.98	United States of America
AENA SME SA	Industrials	2.98	Spain
CHENIERE ENERGY INC	Energy	2.84	United States of America
HELIOS TOWERS PLC	Industrials	2.67	Tanzania, United Republic of
RWE AG	Utilities	2.63	Germany
CENTERPOINT ENERGY INC	Utilities	2.59	United States of America
RUMO SA	Industrials	2.54	Brazil
EIFFAGE	Industrials	2.52	France
CELLNEX TELECOM SA	Industrials	2.51	Spain
VINCI SA	Industrials	2.47	France

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Industrials	Industrial Services	44.39
Utilities	Utilities	34.85
Energy	Oil & Gas	12.26
Real Estate	Real Estate	4.33
Unclassified	Unclassified	2.18
Materials	Materials	1.02
Communications	Telecommunications	0.96

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 38.93% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 31.67%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 2.17% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Labour and Climate Change:

CMS: We focused on diversity equity inclusion given the US Administration's stance. The business is not changing anything they do as a result of changes in White House. We also touched on carbon emissions and management are happy with the level of targeting. Have to make sure there is a balance of reliability and affordability, so seemed reluctant to commit too heavily to reductions. Michigan's plans do gradually decarbonise the energy system.

National Grid: Discussed potential delays to transmission projects from community opposition - National Grid has already baked in some slack into timelines, and hopes that Labour government will support projects especially with changes to appeals process in planned Infrastructure Bill

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable
- ***How did this financial product perform compared with the broad market index?***
Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Global Innovation Equity Fund**

Legal entity identifier **549300GBR2SRIZXLXY34**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 58.17% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm; and
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services. However, using our proprietary research framework we aimed to promote the below characteristics within this fund; however a broader suite of characteristics might also have been promoted on an investment-

by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 14.75%, ESG Q2: 58.01%, ESG Q3: 23.72%.

ESG screening criteria

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 50.44% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating AA
- Benchmark rating A

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 6%, ESG Q2: 64%, ESG Q3: 28%, ESG Q4: 3%. The Fund achieved a 84.72% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (AA) when compared with the benchmark (A).

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's

indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
TENCENT HOLDINGS LTD	Communications	3.99	China
MASTERCARD INC - A	Financials	3.32	United States of America
AMAZON.COM INC	Consumer Discretionary	3.19	United States of America

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	96.50%	98.82%	98.07%
Sustainable investment	58.17%	55.81%	48.94%
Other environmental	29.02%	23.92%	14.73%
Social	29.16%	31.89%	34.21%

● ***In which economic sectors were the investments made?***

Sector	Sub-sector	% Assets
Technology	Software & Tech Services	17.98
Technology	Tech Hardware & Semiconductors	17.55
Communications	Media	13.90
Health Care	Health Care	10.92
Financials	Financial Services	10.28
Industrials	Industrial Products	8.06
Consumer Discretionary	Retail & Whsle - Discretionary	5.68
Consumer Discretionary	Consumer Discretionary Products	3.79
Materials	Materials	3.33
Energy	Oil & Gas	2.83
Unclassified	Unclassified	2.23
Industrials	Industrial Services	1.71
Financials	Banking	1.62
Consumer Staples	Consumer Staple Products	0.11

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 29.02% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 29.16%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 3.50% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied its criteria around ESG scores, ESG Screening and Carbon Intensity to promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Corporate Governance, Human Rights and Climate Change.

Examples include: Mindray: We had an engagement with Mindray to understand their efforts being made in ESG practices and disclosures. Mindray is ambitious in strengthening their disclosures in carbon emission (scope 3 in development), product safety (redesigned product safety process) and talent management (global coverage of training & benefits), while invests heavily in expanding coverage of healthcare in low-tier hospitals (95% village/community hospitals covered) and emerging markets. Despite it has reached a good MSIC ESG rating of AA, we see it further improving to top notch in ESG management and disclosure.

Makalot: We commended the company for their improving disclosure that has led to MSCI BBB rating. For Makalot, ESG is critical to maintain/grow business with their clients. Child labour/safety standards/human rights - are non-negotiables that must be implemented for example with zero tolerance. Environmental is an ongoing improvement that differentiates themselves for their clients (who have high ESG improvement) with every brand having carbon reduction targets etc. Makalot is working to provide them with real time transparency/accuracy that will continue to raise their profile/premium. Governance is less of a risk for clients due to the long association/trust. For investors - rating agencies look at many things and for Makalot, it is about filling in gaps/improving disclosure including things they do not do. For example, they do not use animal fur, have never had the need to disclose what they don't do. However, for rating agencies you have to specify. Hence they are confident they can continue to improve their standing with rating agencies.

Autodesk: We focused on impact disclosure and how Autodesk plans to report on the positive impacts their products have on the building and construction sector. They are working with industry bodies to coordinate on best practice and identify metrics that demonstrate how they help customers reduce emissions, save on materials, wastage, etc. We also spent a good part of the meeting understanding their restructuring plan and management change. ADSK had previously removed its CFO and transferred her within the business. The market did not understand why, but it has emerged she had initiated the current restructuring plan and go to market efficiency steps, and she has been leading on this over the last 12 months. Moving her to the Chief Strategy role allowed her to stay involved and ensure execution was according to plan. They acknowledge this could have been better communicated and this gives a bit of clarity into the issues from last summer. They are still working through the reduction in salesforce headcount, as they implement a geolocation strategy, reduce China exposure, and shift employees to higher priority parts of the business.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Global Mid-Cap Equity Fund**

Legal entity identifier **2138003METNPGPTOXG39**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 43.34% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – promoted sound energy management and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 8.48, ESG Q2: 61.57%, ESG Q3: 25.78%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 81.09% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating AA
- Benchmark rating A

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: Q1 6%, Q2 69%, Q3 25%. The Fund achieved a 83.84% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved an ESG rating based on MSCI data of AA when compared with the benchmark A.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
GAZTRANSPORT ET TECHNIGA SA	Energy	4.58	France
CTS EVENTIM AG & CO KGAA	Consumer Discretionary	4.09	Germany
ROLLINS INC	Industrials	3.69	United States of America

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	95.87%	97.53%	94.15%
Sustainable investment	43.34%	48.90%	40.21%
Other environmental	15.98%	20.89%	15.97%
Social	27.36%	28.01%	24.24%

● ***In which economic sectors were the investments made?***

Sector	Sub-sector	% Assets
Industrials	Industrial Products	14.39
Technology	Software & Tech Services	14.22
Industrials	Industrial Services	9.29
Consumer Discretionary	Consumer Discretionary Products	9.21
Health Care	Health Care	9.09

Financials	Banking	1.92
Technology	Tech Hardware & Semiconductors	1.21
Consumer Staples	Consumer Staple Products	0.74

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 15.98% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 27.36%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 4.13% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, and Corporate Governance.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Global Small & Mid-Cap SDG Horizons Equity Fund**

Legal entity identifier **549300OBY6VYWLR7R110**

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ ☒ **X** Yes

☒ It made **sustainable investments with an environmental objective**: 50.82%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It made **sustainable investments with a social objective**: 42.73%

☐ ☐ ☐ No

☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The Fund invested in companies with minimum of 20% of their revenue, profit, capital or operating expenditure or research and development linked to the UN's SDGs. For companies classified in the benchmark as "Financials", alternative measures of materiality were used based on loans and customer base, details of which can be found in the abrdn Global Small & Mid-Cap SDG Horizons Equity Investment Approach. By investing across SDG Horizons the fund sought (and continues to seek) opportunities in names contributing towards the SDGs across the value chain. During the reporting period, all holdings in the fund met this criteria, while at the same time respecting the "Do no Significant harm principle as per the Aberdeen process. The links with the SDG Pillars are below: Sustainable Real Estate & Infrastructure 21.05%, Circular Economy 13.15%, Water & Sanitation 9.67%, Health & Social Care 10.96%, Education & Employment 10.46%, Sustainable Energy 17.62%, SDG Enablers 10.22%, Financial Inclusion 3.41%

Sustainability indicators measure how the sustainable objectives of this financial product are attained

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainability indicators perform?**

The Fund invested in companies with a minimum of 20% of their revenue, profit, capital or operating expenditure or research and development linked to the UN's SDGs. For companies classified in the benchmark as 'Financials', alternative measures of materiality are used based on loans and customer base. The breakdown of holdings aligned to the SDGs was as below: SDG01 - No poverty 0.27%, SDG02 - Zero Hunger 1.46%, SDG03 - Good Health and Well-Being 16.67%, SDG06 - Clean Water and Sanitation 10.77%, SDG07 - Affordable and Clean Energy 7.67%, SDG08 - Decent Work and Economic Growth 9.55%, SDG09 - Industry, Innovation, Infrastructure 14.02%, SDG11 - Sustainable Cities and Communities 13.48%, SDG12 - Responsible Consumption and Production, 16.88%, SDG13 - Climate action, 1.42%, and SDG 16- Peace, Justice and Strong Institutions 0.27%. The Fund achieved a 76.04% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis). Application of the fund's approach resulted in at least 20% of the Fund's investment universe being excluded as at 30 Sept 2025. We also confirm that during the reporting period, company exclusions are applied to exclude the particular areas of investment related to UN Global Compact, ILO and OECD, Norges Bank Investment Management (NBIM), State Owned Enterprises (SOE), Weapons, Tobacco, Gambling, Alcohol, Thermal Coal, Oil and Gas and Electricity Generation. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

● **...and compared to previous periods?**

In the prevopus period the breakdown of holdings aligned to the SDG Pillars and to SDG Enablers was as below: Financial Inclusion 1%, Sustainable Real Estate & Infrastructure 26%, Water & Sanitation 7%, Sustainable Energy 21%, Education & Employment 10%, Circular Economy 16%, Health & Social Care 5%, SDG Enablers 14% The Fund achieved a 71.83% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis).

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring is in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)

- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

Largest Investments	Sector	% Assets	Country
VOLUTION GROUP PLC	Industrials	4.64	United Kingdom
NEMETSCHEK SE	Technology	4.02	Germany

WSP GLOBAL INC	Industrials	3.11	Canada
HILL & SMITH PLC	Industrials	2.78	United Kingdom
ADVANCED DRAINAGE SYSTEMS IN	Materials	2.64	United States of America
SANWA HOLDINGS CORP	Consumer Discretionary	2.53	Japan

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 80% in Sustainable Investments, including a minimum commitment of 15% to assets with an environmental objective and 15% to social objectives. The Fund invests a maximum of 20% of assets in the "Non Sustainable" category, which is mainly made up of cash, money market instruments and derivatives. The chart below shows the sustainable investments expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

Period	2025	2024
Sustainable investment	93.55%	94.65%
Other environmental	50.82%	58.88%
Social	42.73%	35.77%

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Industrials	Industrial Products	26.29
Health Care	Health Care	14.70
Industrials	Industrial Services	12.30
Materials	Materials	12.13
Consumer Discretionary	Consumer Discretionary Products	9.05
Technology	Software & Tech Services	7.33
Consumer Discretionary	Retail & Whsle - Discretionary	5.40
Consumer Staples	Retail & Wholesale - Staples	4.71
Unclassified	Unclassified	3.16
Technology	Tech Hardware & Semiconductors	2.31
Financials	Banking	1.40
ENERGY	Renewable Energy	0.80
Financials	Financial Services	0.42

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 50.82% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 42.73%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 6.45% of assets in the “not sustainable” category. The investments included are cash, money market instruments, and may also include derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to attain the sustainable investment objective during the reference period?

Diverse SDG Exposure:

We aim to invest in companies whose products and services align with one of our eight impact pillars and measure how the businesses help countries achieve the UN's sustainable development agenda. During the reference period we had holdings exposed to all eight of our impact pillars, fulfilling our goal of offering broad access to the SDG.

Monitoring companies' continued alignment with the SDGs:

We aim to review the companies in the investable universe at least annually. Companies will be removed from the investable universe if:

- The company begins to pursue a strategy that does not align to one of our impact pillars.
- Red flags, controversies and/or incidents emerge that highlight a persistent, structural ESG problem within the company's operations, strategy or culture, to which the company does not appropriately respond.

abrdn's SDG Management Group is the governing body that reviews new investment opportunities. This Group peer reviews all new candidates for the impact fund and its investable universe. The Group meets weekly and includes the Sustainable Development funds' portfolio managers, analysts from across our global and regional equity teams, and senior members of the Investment Sustainability Group. In order for a company to be included in the investable universe, consensus must be reached by the Group.

Company self-disclosure is a crucial part of our approach to impact investing. We believe that if a company intends to deliver a product to address a specific environmental or social need, the impact must be reported. Therefore we heavily rely on engagement with companies and our conversations with the supervisory board, executive management teams, and divisional heads.

Engagement examples from the past year have included:

Coats: The business leads in sustainability, with 46% of its thread sales being recycled. While competitors are catching up, Coats offers a full range of recycled threads globally, benefiting large players and enabling market share gains from smaller competitors. The company is also ahead in digital tracking and understanding of CO2 footprints, which could drive consolidation towards larger players. Additionally, Coats is innovating in textile recycling through its innovation center, focusing on testing and utilizing recycled fibers in its production processes. This includes transitioning from PET products to full-cycle recycling, marking a significant step towards sustainability. Sustainability is embedded in Coats' strategy, influencing product innovation, recyclability, and water usage across divisions. Market Leadership in Sustainable Products. Ecoverde, a leading product line, drives growth, though its higher costs raise potential demand concerns among cost-conscious customers. Operational Integration and new ambitious targets announced in Annual Report. Sustainability is

deeply embedded in Coats' facilities, with measurable progress in eco-health, safety, and employee engagement. ESG Risks & Challenges. While early sustainability initiatives yielded quick wins, future improvements will be incremental. Resource affordability and recycled material costs remain actively managed.

Me Group International: Governance remains the main topic given the family ownership. Today's meeting reminded us about the positives of family ownership, they are firmly focused on profit (happy to lose the Sainsbury's contract as terms were poor). Some family businesses become complacent over time but this is certainly not the case at ME, where there is a clear restless energy to drive improvement. There is also a real focus on profit delivery rather than layering on cost. There are no glamorous facilities or perks in the business. The area of governance that does need attention is the board composition, where there are a number of non-independent NEDs, the length of tenure is considerable in many cases and the CFO is not on the board. We expect the company to address these issues, with the recognition that it would unlock material shareholder value as it will remove a reason not to look at the company.

Merit Medical: Succession Planning No further colour on Joe Wright (former President's and likely successor to Fred Lampropoulous) departure beyond the press release but confirmed it was a board decision. Fred Lampropoulous (Chairman & CEO)'s contract expires at the end of 2025 but will likely sit on the Board for 2 years. Board "will do what is necessary" i.e. Fred will stay in role longer if needed as they want to get the succession planning right rather than just getting him out of the door. Board will run the process to find his replacement and is looking at internal and external candidates, but no information was provided re the type of skill/experience they are looking for.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Global Sustainable Equity Fund**

Legal entity identifier **549300JBCUEJEB0RMF41**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 66.18% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 18.37%, ESG Q2: 63.59%, ESG Q3: 17.10%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 10% of issuers with an ESG House Score that are in the benchmark. Application of the binary exclusions and the ESG House-based exclusions resulted in at least 20% of the Fund's investment universe being excluded as at 30 Sept 2025.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 40.71% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating AA
- Benchmark rating A

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 19%, ESG Q2: 67%, ESG Q3: 14%. The Fund achieved a 47.17% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (AA) when compared with the benchmark (A).

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within

tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are

captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
MICROSOFT CORP	Technology	7.03	United States of America
TAIWAN SEMICONDUCTOR-SP ADR	Technology	4.37	Taiwan, Republic of China
NVIDIA CORP	Technology	4.03	United States of America

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

Period	2025	2024	2022
E/S Characteristics	99.07%	97.11%	99.40%
Sustainable investment	66.18%	72.81%	69.44%
Other environmental	33.39%	30.79%	27.69%
Social	32.80%	42.02%	41.75%

In which economic sectors were the investments made?

Sector	Sub-sector	% Assets
Technology	Tech Hardware & Semiconductors	15.89

	Products	
Unclassified	Unclassified	1.97
Consumer Staples	Retail & Wholesale - Staples	1.70
Financials	Insurance	1.68

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 22/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 33.39% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 32.80%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 0.93% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied its criteria around ESG scores, ESG Screening and Carbon Intensity to promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Corporate Governance, Human Rights and Climate Change. Examples include:

L’Oreal: We engaged with L’Oreal on a handful of key ESG topics including Climate Change, Deforestation, Human Rights, Plastic and Packaging and Animal Welfare. Overall L’Oreal is sector leading with their management of ESG issues, and stands out for its approach to Human Rights. They are working to comply with European directives on Deforestation by the end of 2025 and have good traceability to the mill level. However in some areas such as packaging the ambitious targets L’Oreal has set look difficult to achieve unless the wider recycled infrastructure and ecosystem is able to keep up. Overall the meeting supports our current assessment of L’Oreal as an ESG leader.

HDFC Bank: We engaged with HDFC Bank to encourage improved disclosures around deforestation risk in the bank’s agricultural lending activities, discussing the views taken by Forest500 and MSCI towards its perceived environmental impact. We requested a formal deforestation policy, incorporating the relevant soft commodities, and an escalation policy where borrowers don’t meet required criteria. To support next steps, we also shared examples of best practice within Emerging Market banks.

Mindray: We had an engagement with Mindray to understand their efforts being made in ESG practices and disclosures. Mindray is ambitious in strengthening their disclosures in carbon emission (scope 3 in development), product safety (redesigned product safety process) and talent management (global coverage of training & benefits), while invests heavily in expanding coverage of healthcare in low-tier hospitals (95% village/community hospitals covered) and emerging markets. Despite it has reached a good MSIC ESG rating of AA, we see it further improving to top notch in ESG management and disclosure.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● **How does the reference benchmark differ from a broad market index?**

Not applicable

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Indian Bond Fund**

Legal entity identifier **22210055PGXH7RMYCU68**

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.06% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation or jurisdiction, and/or products

and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management, increased renewable energy usage, and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – effectively tackled corruption and inequality, promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, encouraged healthy relationships with communities, promoted social cohesion and integration, and encouraged investment in human capital.

Benchmark

The Fund did not use a benchmark as a reference point for portfolio construction or for the purpose of attaining ESG characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Screening Criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG Assessment Criteria (corporate and SOE issuers): To avoid issuers with poor ESG practices, we apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future.

There are no high risk issuers held in the fund.

ESGP Performance (sovereign issuers): We confirm that during the reporting period the Fund has assessed all sovereign debt positions against the proprietary ESGP framework.

ESG Performance (corporate and SOE issuers): We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the MSCI ESG rating. This is implemented by excluding the bottom 5% of issuers with MSCI ESG rating that are in the benchmark.

● ***...and compared to previous periods?***

N/A - No Previous report

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and

protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal

coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

Largest Investments	Sector	% Assets	Country
INDIA GOVERNMENT BOND 7.4% 09/19/2062	Government	9.33	India
INDIA GOVERNMENT BOND 7.36% 09/12/2052	Government	9.30	India

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 67% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 33% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Government	Sovereigns	58.99
Government	Supranationals	27.54
Government	Government Agencies	4.48
Industrials	Industrial Services	2.55
Financials	Banking	2.52
Utilities	Utilities	1.87
Unclassified	Unclassified	1.63
Financials	Financial Services	0.41

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of investments made in transitional and enabling activities?

The fund holds 0% investments made in transitional and enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 19.98% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 8.08%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 33% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied ESG assessment criteria including:

- ESG screening criteria
- ESG assessment criteria
- promoting good governance including social factors

to promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● *How does the reference benchmark differ from a broad market index?*

Not applicable

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

● *How did this financial product perform compared with the reference benchmark?*

Not applicable

● ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Indian Equity Fund**

Legal entity identifier **5493007UVTAIT743FV49**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ ☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 64.98% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 0%, ESG Q2: 57.47%, ESG Q3: 41.46%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 43.49% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the ESG rating based on MSCI data when compared with the benchmark:

- Fund rating A
- Benchmark rating BBB

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 0.0%, ESG Q2: 59.2%, ESG Q3: 37.3%, ESG Q4: 0.0%. The Fund achieved a 58.65% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (BBB when compared with the benchmark (BBB)).

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
ABERDEEN GBL INDIAN EQTY LTD	Unclassified	29.79	India

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	97.62%	97.72%	98.34%
Sustainable investment	64.98%	71.64%	62.14%
Other environmental	16.89%	25.81%	15.88%
Social	48.09%	45.83%	46.27%

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Unclassified	Unclassified	31.17
Financials	Banking	8.69

Consumer Discretionary	Retail & Whsle - Discretionary	0.65
Industrials	Industrial Services	0.53

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.89% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 48.09%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 2.38% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Environment, and Corporate Governance:

HDFC Bank: We engaged with HDFC Bank to encourage improved disclosures around deforestation risk in the bank's agricultural lending activities, discussing the views taken by Forest500 and MSCI towards its perceived environmental impact. We requested a formal deforestation policy, incorporating the relevant soft commodities, and an escalation policy where borrowers don't meet required criteria. To support next steps, we also shared examples of best practice within Emerging Market banks.

Aptus: Management explained that it's easy to hire but that employees will rotate between companies in the industry. We discussed sales KPIs which are essential to the business' ability to retain talent. In the past, culture was that everyone needs to push hard and grow for instance 20% every quarter. A lot of undue pressure by branch and cluster managers on new joiners. This led attrition. Management explained branch managers now are learning soft skills to help/handhold new joiners, and to have patience to teach. Proper education/training systems in place for first 2 months. Retention scheme bonuses were also announced, where new employees are rewarded if they manage to stay for at least 6 months with good m/m performance. Attrition rate is around 20-30% which is an improvement. For the Risk underwriting team there have not been any changes to KPI. For the credit team, understanding of cash flows and whether to take it forward is key. They will report to another head of credit rather than the branch manager and their incentives are not disbursements and volumes. Right now, credit team is going through technological enhancement. Initially, credit person in the branch will have to meet up with the borrower to understand their cash flows and business model, utilize the account aggregator to understand bank statements, etc. and type all of these into a manual form. However, the sales team are now equipped with a video recording capability where transcripts of the discussion are noted down, of which HQ can key these in and disburse it from HQ side, reducing the need for the credit officer to go down to the site several times just to get facts recorded down. These will reduce some costs and most importantly improve efficiencies. We also touched on management KPIs which are what they indicated previously and aligned with the business model, i.e. AUM and disbursement growth targets.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable
- ***How did this financial product perform compared with the broad market index?***
Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Japanese Smaller Companies Sustainable Equity Fund**

Legal entity identifier **549300S5VXYQ7WSGV137**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ ☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 44.34% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 10.07%, ESG Q2: 42.67%, ESG Q3: 45.55%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 10% of issuers with an ESG House Score that are in the benchmark. Application of the binary exclusions and the ESG House-based exclusions resulted in at least 20% of the Fund's investment universe being excluded as at 30 Sept 2025.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 20.57% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating A

- Benchmark rating A

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: : ESG Q1: 7.5%, ESG Q2: 46.6%, ESG Q3: 42.7%, ESG Q4: 0.0%. The Fund achieved a 15.83% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved an ESG rating based on MSCI data of A when compared with the benchmark BBB.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and

abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable

investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.

- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.

- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	98.30%	99.01%	97.36%
Sustainable investment	44.34%	44.88%	38.93%
Other environmental	11.86%	14.64%	12.62%
Social	32.48%	30.24%	26.31%

● ***In which economic sectors were the investments made?***

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11.86% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 32.48%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 1.70% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Corporate Governance and Labour:

Kandenko: More can be done on disclosures albeit it hasn't been a focus thus far. We've tried to encourage better disclosures which can easily raise their ratings, so one we will continue to push management on. Otherwise, they do meet minimum standards on health and safety, product quality, as well as supply chain management. Specifically on supply chain management, where resources permit, they could improve on checks and balances through the use of audit teams to inspect their suppliers and partners, as well as more efforts around smoothing out raw material shortages/price fluctuations.

Benext-Yumeshin Group: A straightforward meeting with the company, and they do pay quite a lot of attention to employee morale and efforts to attract and retain talents since this is the key moat to the business. They've managed to reduce employee turnover ratio from 30% ish to around 20% right now, which is quite impressive. They did this by having a complete changeover in employee management, including having more touch points with employees at relevant employee milestones. Besides that, they've also enhanced a sense of belonging because their employees felt alone when dispatched to client's office. We also touched on succession planning. Sato-san head hunted by founder who is now 92yrs old. Sato-san is 68yrs, has no plans to retire. The President, CEO and CFO meet weekly and Sato-san has been asked to work longer as much as possible.

Kakaku.com: Kakaku.com appointed a new CEO in April last yr. He was previously head of Tabelog, which had grown substantially under his leadership. Since taking office, the new CEO has refocused the business on achieving DD revenue and OP growth. Consequently Kakaku is entering into a new growth phase. The company enjoys a sound risk management approach, particularly in two of the most material risk, i.e. human capital development and cyber security. They clearly understand how they can attract and retain talents, and have put in huge efforts to ensure that employees are not only well compensated in the firm, but also have room to grow professionally. They believe they can obtain an even higher score by external ratings provider and will strive to do so, given they already have the in place, the processes to manage ESG. It is only a matter of disclosures and they will put in more effort on that front.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - Japanese Sustainable Equity Fund**

Legal entity identifier **5493007G0SOE2SJAK375**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 43.25% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 15.73%, ESG Q2: 35.55%, ESG Q3: 47.51%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 10% of issuers with an ESG House Score that are in the benchmark. Application of the binary exclusions and the ESG House-based exclusions resulted in at least 20% of the Fund's investment universe being excluded as at 30 Sept 2025.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 22.95% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating AA
- Benchmark rating AA

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: ESG Q1: 15.4%, ESG Q2: 48.4%, ESG Q3: 35.6%. The Fund achieved a 30.69% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved the same ESG rating based on MSCI data (AA) when compared with the benchmark (AA).

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within

tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are

captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.

- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.

- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.

- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
MITSUBISHI UFJ FINANCIAL GRO	Financials	7.13	Japan
SONY GROUP CORP	Technology	5.46	Japan
TOKIO MARINE HOLDINGS INC	Financials	5.11	Japan
HITACHI LTD	Industrials	4.19	Japan
NEC CORP	Technology	3.85	Japan

CHUGAI PHARMACEUTICAL CO LTD	Health Care	2.18	Japan

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	98.79%	99.34%	96.26%
Sustainable investment	43.25%	43.56%	32.97%
Other environmental	11.72%	11.83%	13.43%
Social	31.54%	31.74%	19.55%

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% Assets
Technology	Tech Hardware & Semiconductors	16.51
Industrials	Industrial Products	14.96
Consumer Discretionary	Consumer Discretionary Products	10.74
Financials	Banking	8.02
Industrials	Industrial Services	6.71
Technology	Software & Tech Services	5.96
Health Care	Health Care	5.64
Consumer Staples	Retail & Wholesale - Staples	5.56
Financials	Insurance	5.16
Materials	Materials	4.72
Consumer Staples	Consumer Staple Products	4.15
Consumer Discretionary	Retail & Whsle - Discretionary	3.29
Real Estate	Real Estate	2.63
Communications	Telecommunications	1.86
Communications	Media	1.53
Financials	Financial Services	1.51
Unclassified	Unclassified	0.87
Utilities	Utilities	0.18

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives) .

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (Capex) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (Opex) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11.72% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 31.54%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 1.21% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, Human Rights, and Corporate Governance:

NH Foods LTD: Very impressive meeting. Potential for upgrades in this company as they continue to deliver on their shorter term ESG targets. We spoke across numerous material issues, such as carbon emissions management, supply chain management, as well as packaging and lifecycle of products. The company has a systematic way of executing that enables for further improvement. We encouraged better disclosures which they acknowledged.

Kakaku.com INC: Kakaku.com appointed a new CEO in April last yr. He was previously head of Tabelog, which had grown substantially under his leadership. Since taking office, the new CEO has refocused the business on achieving DD revenue and OP growth. Consequently Kakaku is entering into a new growth phase. We were encouraged by their sound risk management approach, particularly in two of the most material risk, i.e. human capital development and cyber security. They clearly understand how they can attract and retain talents, and have put in huge efforts to ensure that employees are not only well compensated in the firm, but also have room to grow professionally. They believe they can obtain an even higher score by external ratings provider and will strive to do so, given they already have the in place, the processes to manage ESG. It is only a matter of disclosures and they will put in more effort on that front.

How did this financial product perform compared to the reference benchmark?

Not applicable

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ ☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 38.70% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

Environment – reduced energy consumption and greenhouse gas emissions, increased renewable energy usage/generation, reduced biodiversity/ecological impacts.

Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

ESG Assessment Criteria

Our equity analysts assign a proprietary score (1 to 5) to articulate how well a business is managing material ESG factors and the likely impact on performance. This score summarises insights across three key areas:

- 1.) Our view on the quality of the corporate governance and oversight of the business and management
- 2.) Identification of the most material environmental, social, and operational governance issues the company must manage
- 3.) An assessment of the management of the most material ESG risks and opportunities and impact the business' operational performance and valuation

1 indicates best in class performance with excellent governance, strong operational ESG integration and maximisation of revenue opportunities linked to sustainability themes. Overall an ESG Q1 indicates that ESG enhances a company's competitive advantage and strengthens an investment case. ESG Q 5 indicates poor governance and no oversight, little appetite to identify and manage ESG risks and no awareness of revenue opportunities linked to sustainability themes which mean there is significant investment risk. The breakdown of portfolio scores was as below: ESG Q1: 0%, ESG Q2: 24.44%, ESG Q3: 73.99%.

We confirm that during the reporting period, binary exclusions are applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria. Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding at least the bottom 5% of issuers with an ESG House Score that are in the benchmark.

Carbon intensity

We confirm that during the reporting period the portfolio performed better than the benchmark, in line with our overall commitment. The Fund achieved a 66.67% lower carbon intensity than the benchmark as at 30 Sept 2025 (on a WACI basis).

ESG Fund Rating

We confirm that during the reporting period the Fund achieved the same ESG rating based on MSCI data when compared with the benchmark:

- Fund rating BBB
- Benchmark rating BBB

Promotes good governance including social factors

We confirm that during the reporting period the Fund focused engagement and analysis on governance and that using the Aberdeen ESG House Score, we avoided those companies with the worst governance practices.

● **...and compared to previous periods?**

In the previous period the breakdown of portfolio scores was as below: Q1 4%, Q2 30%, Q3 66%. The Fund achieved a 53.71% lower carbon intensity than the benchmark as at 30 Sept 2024 (on a WACI basis). We confirm that during the previous reporting period the Fund achieved an ESG rating based on MSCI data of BBB when compared with the benchmark BBB.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. abrdn use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, abrdn use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. abrdn seek to establish or estimate the share of the investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

abrdn uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using abrdn's own insight and engagement outcomes abrdn overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. abrdn have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

abrdn have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under abrdn's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. abrdn's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and abrdn internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, abrdn consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. abrdn aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, abrdn used the above approach to test the contribution to sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, abrdn applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- abrdn monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, abrdn applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

abrdn apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- abrdn monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial abrdn may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, abrdn may engage to seek the creation of a long-term target and reduction plan.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
Q2 HOLDINGS INC	Technology	2.90	United States of America

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

The fund committed to hold a minimum of 70% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 30% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	99.20%	98.72%	97.04%
Sustainable investment	38.70%	34.93%	34.05%
Other environmental	4.37%	4.45%	11.31%
Social	34.33%	30.48%	22.73%

● ***In which economic sectors were the investments made?***

Sector	Sub-sector	% Assets
Health Care	Health Care	16.48
Technology	Software & Tech Services	14.75
Financials	Banking	12.54
Industrials	Industrial Products	11.52

Utilities	Utilities	2.48
Unclassified	Unclassified	1.69
Technology	Tech Hardware & Semiconductors	1.65
Consumer Staples	Retail & Wholesale - Staples	0.55

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 22/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.37% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 34.33%

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 0.80% of assets in the "Other" category. The investments included under "other" are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote the environmental and social characteristics, the Fund applies ESG assessment criteria, ESG screening criteria and promotes good governance including social factors. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Labour, and Corporate Governance:

ELF Beauty: Labor/Employee engagement - comp model is cash light/equity heavy, with equity being granted to every employee every year. We asked about employee morale since the stock has been on a decline since June, and management acknowledged that it has been tough for employees but believes their culture of transparency is working for them. Weekly townhalls are held to discuss the business and what's driving the stock price, and employees understand their roles and how they can drive improvement over the long-term. Change the Board - ELF's board is 78% women and 44% diverse, and the company has launched the Change the Board initiative to promote diversity in board rooms. Bringing awareness and education is a large part of the initiative, but they've also partnered with the NACD (National Association of Corporate Directors) to sponsor 20 candidates to prepare for US boards. Overall they've been pleased with the positive consumer response.

Merit Medical: We focused on succession planning but were provided with no further colour on Joe Wright's departure (former President's and likely successor to Fred Lampropoulous) beyond the press release but confirmed it was a board decision. Fred Lampropoulous (Chairman & CEO)'s contract expires at the end of 2025 but will likely sit on the Board for 2 years. Board "will do what is necessary" i.e. Fred will stay in role longer if needed as they want to get the succession planning right rather than just getting him out of the door. Board will run the process to find his replacement and is looking at internal and external candidates, but no information was provided re the type of skill/experience they are looking for.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: **abrdn SICAV I - US Dollar Credit Sustainable Bond Fund**

Legal entity identifier **549300OXT5TU2ZS8K192**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: %

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: %

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53.45% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics by aiming to invest in issuers that:

- Avoided severe, lasting or irremediable harm;
- Appropriately addressed adverse impacts on the environment and society; and
- Supported a decent standard of living for their stakeholders.

The Fund aimed to promote environmental and social characteristics holistically. In doing so, we did not consider all characteristics for all investments, but rather focused on the most relevant characteristics for each investment based on the nature of its activities, areas of operation, and products and services.

Using our proprietary research framework, we aimed to promote the characteristics listed below within this Fund. A broader suite of characteristics may also have been promoted on an investment-by-investment basis:

- Environment – promoted sound energy management and reduced greenhouse gas emissions, promoted good water, waste and raw materials management, and addressed biodiversity/ecological impacts.
- Social – promoted good labour practices and relations, maximised employee health and safety, supported diversity in the workforce, and healthy relationships with communities.

Benchmark

This Fund had a financial benchmark that was used for portfolio construction but did not incorporate any sustainable criteria and was not selected for the purpose of attaining these characteristics. This financial benchmark was used as a comparator for Fund performance and as a comparison for the Fund's binding commitments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Avoiding Poor ESG Business Practices: We apply an ESG Risk Rating of Low, Medium, High (Low is better) to each issuer. This is credit profile-specific and represents how impactful we believe ESG risks are likely to be to the credit quality of the issuer now and in the future. There are no high risk issuers held in the fund. Therefore, all issuers pass the good governance check.

ESG screening criteria: We confirm that during the reporting period, binary exclusions were applied to exclude the particular areas of investment related to UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal. These screening criteria apply in a binding manner and there are no holdings in the fund that fail the agreed criteria.

ESG performance: Our proprietary ESG House Score, developed by our central sustainability team in collaboration with the Quantitative investment team, is used to identify companies with potentially high or poorly managed ESG risks. The score is calculated by combining a variety of data inputs within a proprietary framework in which different ESG factors are weighted according to how material they are for each sector. We confirm that during the reporting period the Fund excluded companies with the highest ESG risks, as identified by the ESG House Score. This is implemented by excluding the bottom 10% of issuers with an ESG House Score that are in the benchmark.

● **...and compared to previous periods?**

During the previous reporting period, the fund held no high risk rating issuers. The screening criteria as applied and there were no holdings in the fund that failed the agreed criteria. The bottom 10% of issuers with an ESG House Score that are in the benchmark were excluded.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investment is to make a contribution to solving an environmental or social challenge, in addition to not causing significant harm, and being well governed. Each sustainable investment may make a contribution to Environmental or Social issues. In fact, many companies will make a positive contribution to both. Aberdeen use the six environmental objectives of the Taxonomy to inform Environmental contributions, including: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. In addition, Aberdeen use the 17 Sustainable Development Goals and their sub-goals to supplement the EU Taxonomy topics and provide a framework for considering Social objectives.

An economic activity must have a positive economic contribution to qualify as a Sustainable investment, this includes consideration of Environmental or Socially aligned revenues, Capex, Opex or sustainable operations. Aberdeen seek to establish or estimate the share of the

investee company's economic activities/contribution towards a sustainable objective and it is this element that is weighted and counted towards the Sub-fund's total aggregated proportion of Sustainable Investments.

Aberdeen uses a combination of the following approaches:

- i. a quantitative methodology based on a combination of publicly available data sources; and
- ii. using Aberdeen's own insight and engagement outcomes Aberdeen overlay the quantitative methodology with a qualitative assessment to calculate an overall percentage of economic contribution towards a sustainable objective for each holding in a Fund

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As required by the SFDR Delegated Regulation, the investment does not cause Significant Harm ("Do No Significant Harm"/ "DNSH") to any of the sustainable investment objectives. Aberdeen have created a 3-step process to ensure consideration of DNSH:

i. Sector Exclusions

Aberdeen have identified a number of sectors which automatically do not qualify for inclusion as a Sustainable Investment as they are considered to be causing significant harm. These include but are not limited to: (1) Defence, (2) Coal, (3) Oil & Gas Exploration,

Production and associated activities, (4) tobacco, (5) gambling and (6) alcohol.

ii. DNSH Binary Test

The DNSH test, is a binary pass/fail test which signals if the company passes or fails criteria for the SFDR Article 2 (17) "do no significant harm". Pass indicates under Aberdeen's methodology the company has no ties to controversial weapons, less than 1% of revenue from thermal coal, less than 5% of revenue from tobacco related activities, is not a tobacco producer, and has no red/severe ESG Controversies. If the company fails this test, it cannot be considered a Sustainable Investment. Aberdeen's approach is aligned with the SFDR PAIs included within tables 1, 2 & 3 of the SFDR Delegated Regulation and is based on external data sources and Aberdeen internal insights.

iii. DNSH Materiality Flag

Using a number of additional screens and flags, Aberdeen consider the additional SFDR PAI's indicators as defined by the SFDR Delegated Regulation to identify areas for improvement or potential future concern. These indicators are not considered to cause significant harm and therefore a company with active DNSH materiality flags may still be considered to be a Sustainable Investment. Aberdeen aim to enhance the engagement activities to focus on these areas and seek to deliver better outcomes by resolving the issue

During the reporting period, Aberdeen used the above approach to test the contribution to sustainable investment.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The fund considers Principle Adverse Impact Indicators defined by the SFDR Delegated Regulation.

Pre investment, Aberdeen applies a number of norms and activity-based screens related to PAIs, including but not limited to: UN Global Compact, controversial weapons, and thermal coal extraction.

UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary

devices, depleted uranium ammunition or blinding lasers).

Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the following PAI indicators are considered:

- Aberdeen monitors all mandatory and additional PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds. PAI indicators that either fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement.
- Consideration of portfolio carbon intensity and GHG emissions via our Climate tools and risk analysis
- Governance indicators via our proprietary governance scores and risk framework, including consideration of sound management structures, employee relations, remuneration of staff and tax compliance.
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes, all sustainable investments are aligned with OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human rights. Breaches and violations of these international norms are flagged by an event-driven controversy and are captured in the investment process, and in turn excluded from consideration as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund has committed to consider the following PAIs in its investment process, this means that there is pre- and post-trade monitoring in place and that every investment for the Fund is assessed on these factors to determine its appropriateness for the Fund.

- PAI 1: GHG emissions (scope 1 and 2)
- PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Adverse impacts monitoring

Pre investment, Aberdeen applies a number of norms and activity-based screens related to the above PAIs, including but not limited to:

- UNGC: The Fund uses norms-based screens and controversy filters to exclude companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights, as well as state owned entities in countries which violate norms.
- Controversial Weapons: The Fund excludes companies with business activities related to controversial weapons (cluster munitions, anti-personnel landmines, nuclear weapons, chemical and biological weapons, white phosphorus, non-detectable fragments, incendiary devices, depleted uranium ammunition or blinding lasers).
- Thermal Coal Extraction: The Fund excludes companies with exposure to the fossil fuels sector based on percentage of revenue from thermal coal extraction.

Aberdeen apply a fund specific set of company exclusions, more detail on these and the overall process is captured within the Investment Approach, which is published at www.aberdeeninvestments.com under "Fund Centre".

Post-investment the above PAI indicators are monitored in the following way:

- Company carbon intensity and GHG emissions is monitored via our Climate tools and risk analysis
- On an on-going basis the investment universe is scanned for companies that may be in breach of international norms described in the OECD guidelines for multinational enterprises and the UN guiding principles on business and human rights.

Post-investment we also undertake the following activities in relation to additional PAI's:

- Dependent on data availability, quality and relevance to the investments the consideration of additional PAI indicators will be on a case-by- case basis.
- Aberdeen monitors PAI indicators via our ESG integration investment process using a combination of our proprietary house score and 3rd party data feeds.
- Governance indicators are monitored via our proprietary governance scores and risk framework, including consideration of sound management structures, and remuneration.

Adverse impact mitigation

- PAI indicators that fail a defined pre-investment screen are excluded from the investment universe and cannot be held by the fund. We confirm that screening in line with our Investment Approach documents has been undertaken during the reporting period.
- PAI indicators that are monitored post investment which fail a specific binary test or are considered above typical are flagged for review and may be selected for company engagement. These adverse indicators may be used as a tool for engagement, for example where there is no policy in place and this would be beneficial Aberdeen may engage with the issuer or company to develop one, or where carbon emissions are considered to be high, Aberdeen may engage to seek the creation of a long-term target and reduction plan.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:
01/10/2024 - 30/09/2025

Largest Investments	Sector	% Assets	Country
JPMORGAN CHASE & CO 6.07% 10/22/2027	Financials	1.20	United States of America
EQUINIX INC 1.45% 05/15/2026	Real Estate	1.10	United States of America

CARRIER GLOBAL CORP 2.7% 02/15/2031	Industrials	0.80	United States of America

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund committed to hold a minimum of 90% of the Fund's assets aligned with E/S characteristics. Environmental and social safeguards are met by applying certain PAI's, where relevant, to these underlying assets. The Fund invests a maximum of 10% of assets in the "Other" category, which include cash, money market instruments and derivatives. The chart below shows the investments aligned with Environmental and Social Characteristics expressed as a percentage of Net Asset Value (NAV), achieved during the reporting period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Period	2025	2024	2022
E/S Characteristics	96.89%	98.30%	97.39%
Sustainable investment	53.45%	49.53%	30.99%
Other environmental	25.26%	24.22%	11.82%
Social	28.19%	25.31%	19.17%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to sustainable investments with an environmental objective aligned with the EU Taxonomy is 0%, the fund is permitted to allocate to such investments which would form part of the overall allocation to sustainable investments with an environmental objective.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives).

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

The fund holds 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 0 % of the total investment.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The fund holds 0% investments made in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund held 0% investments in sustainable investments with an environmental objective aligned with the EU Taxonomy, during the previous reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2022/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 25.26% of assets as at the year end date and is representative of the Reference Period.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available.

Data providers' methodologies vary and results may not be fully aligned to all Taxonomy requirements, as long as publicly reported company data is lacking and assessments rely largely on equivalent data.

Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments (concerning all environmental objectives), and the remainder as not aligned with the EU Taxonomy.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective is 28.19%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund invested 3.11% of assets in the “Other” category. The investments included under “other” are cash, money market instruments, derivatives. The purpose of these assets are to meet liquidity, target return or manage risk and may not contribute to the environmental or social aspects of the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund has applied ESG assessment criteria including:

- ESG screening criteria,
- ESG Performance
- Avoiding Poor ESG Business Practices.

These criteria promote Environmental & Social characteristics. In addition, the fund committed to consider the following PAIs within the investment process: PAI 1: GHG emissions (scope 1 and 2), PAI 10: Violations of the UN Global Compact (UNGC) principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). The fund has also engaged with issuers on relevant environmental or social topics which include Climate change, Environment, Labour, Human rights, Corporate Behaviour and Corporate Governance.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable
