Sustainability Disclosure Requirements (SDR) and labelling regime

Sustainable investment labels help investors find products that have a specific sustainability goal. The fund does not have a sustainable investment label under the SDR. This is because the fund has a financial objective to track the return of an Index, which is a subset of securities within the parent Index. While the fund has material sustainability characteristics, it does not have a sustainability objective.

Information

Manager name	abrdn Fund Managers Limited
Legal entity identifier	213800A6DE4PQTVZXQ46

Fund objective

To generate growth over the long term (5 years or more) by tracking the return of the MSCI AC Asia Pacific ex-Japan Climate Solutions Target Select Index (the "Index").

Sustainability approach

Benchmark index and sustainable approach/Metrics

The Index aims to reflect the performance characteristics of a subset of equity securities within the MSCI AC Asia Pacific ex Japan Index (the "Parent Index"). The Index incorporates material sustainability characteristics through a combination of targets relative to the Parent Index by applying higher weights to constituent companies with stronger environmental, social and governance ("ESG") scores, lower carbon footprints and a higher exposure to revenues from clean technology solutions such as alternative energy, energy efficiency, green building, pollution prevention, sustainable water and sustainable agriculture ("Clean Technology Solutions"). As such the aggregate MSCI ESG score, carbon footprint, and exposure to revenues from Clean Technology Solutions of the Index evolves with that of the Parent Index. Further, sustainability characteristics are targeted at aggregate fund level, meaning these characteristics may not be achieved or displayed by each individual company in the Index, including companies that do not have any sustainability characteristics

Sustainability characteristics

The Index will tilt constituent company weights to:

1. target a weighted average MSCI ESG score (0 (worst) to 10 (best)) that is 10% higher than that of the Parent Index (as measured by MSCI). The MSCI ESG Score provides an opinion of companies' management of financially relevant ESG risks and opportunities. Each rating takes into consideration the company's exposure to potentially material ESG risks, the quality of management systems and governance structures to mitigate potential ESG risks, and where applicable, positioning to meet market demand for the provision of products and services that have a positive environmental or social contribution;
2. target a carbon intensity that is 50% lower than that of the Parent Index based on scope 1 & 2 carbon emission (as measured by MSCI). Scope 1 carbon emissions are greenhouse gas emissions generated from sources which are owned or controlled by the company. Scope 2 carbon emission are greenhouse gas emissions generated from the consumption of purchased electricity, heat or steam by the company. The target is to be 50% lower than the parent index based on each of the following metrics:
    a. The Weighted Average Carbon Intensity (WACI) - this is measured using the weighted average of scope 1 & 2 carbon emissions divided by revenues.
    b. The Economic Emissions Intensity (EEI) – this is measured using the weighted average of scope 1 & 2 carbon emissions divided by a company's total value (market capitalisation + debt + cash).

    In respect of scope 3 carbon emissions, which relates to indirect emissions, such as from a company's supply chain or from the use of a company's end products, a WACI and EEI that is equal to or lower than the Parent Index is targeted. The difference in the target level compared to scope 1 & 2 carbon emissions is due to challenges around relatively low levels of corporate disclosures in these areas and inconsistent estimation methods; and
3. target a weighted averaged percent of revenue from Clean Technology Solutions that is 50% higher than that of the Parent Index (as measured by MSCI). Clean Technology Solutions are considered a core part of the long-term solution for the global ambitions to transition to a lower carbon environment and as such revenues generated will evolve with the growth in this area of the market.

All the above Index criteria are subject to risk diversification constraints, for example, minimum and maximum constituent, sector and country weights relative to the Parent Index and aim to minimise the tracking error relative to the Parent Index.

Negative screening criteria

The Index applies a set of company exclusionary thresholds which are related to controversial weapons, thermal coal, tobacco, and very severe controversies. Please refer to the prospectus for full details on the screening criteria applied for this fund.

Disinvestment approach

The index alignment to the stated outcomes and the negative screening criteria is completed on a quarterly basis. As a result, disinvestment from the non-compliant securities will also happen at this point and generally no longer than 3 months, allowing for market conditions.

Sustainability metrics

The sustainability characteristics of the Index are achieved through the combination of the three ESG targets set relative to the Parent Index. The Index rebalances on a quarterly basis to align to these targets. The below charts represent the comparative profiles of the Parent Index and the Index for each of these three targets.

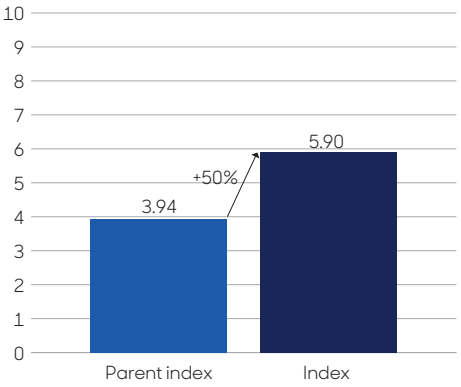

MSCI ESG score*

Carbon intensity (t CO_2e/$M Sales)**

% Revenue from clean technology solutions*

*weighted average
**Weighted Average Carbon Intensity (WACI) measured by tonnes of carbon emissions (scope 1 & 2) divided by total sales averaged by how much is invested in each company. Details of additional carbon measures can be provided on request.
