Report of the Authorised Corporate Director

abrdrn OEIC III (the 'Company') is an open-ended investment company with variable capital. The Company is incorporated by the Financial Conduct Authority, having its head office in Scotland with registered number IC000831 and is currently authorised pursuant to Regulation 14 of the Open-Ended Investment Companies Regulations 2001 (the 'OEIC Regulations'). The effective date of the authorisation order made by the Financial Services Authority (the predecessor of the FCA) was 14 July 2010. The Company is also an alternative investment fund for the purposes of the FCA Rules.

The Company is constituted as a non-UCITS retail scheme for the purposes of the FCA Rules. Its FCA Product Reference Number ('PRN') is 523803. It has an umbrella structure and at 31 December 2025 consists of twenty six live funds and six closed funds. abrdrn Dynamic Multi Asset Growth Fund is no longer open to investors, having redeemed all shares in 2023. The MyFolio Market funds are no longer open to investors, having merged into the MyFolio Index funds on 11 July 2025. It is the intention of the ACD to close abrdrn Multi-Sector Credit Fund on 27 March 2026. As a result, the financial statements for abrdrn Dynamic Multi Asset Growth Fund, abrdrn MyFolio Market I Fund, abrdrn MyFolio Market II Fund, abrdrn MyFolio Market III Fund, abrdrn MyFolio Market IV Fund, abrdrn MyFolio Market V Fund and abrdrn Multi-Sector Credit Fund have not been prepared on a going concern basis.

Report of the Authorised Corporate Director (continued)

The Authorised Corporate Director (the ACD) and abrdn Investment Management Limited are wholly owned subsidiaries of Aberdeen Group plc ('Aberdeen'), and are accordingly associates. The Investment Advisers have the authority of the ACD to make decisions on its behalf in all aspects of the investment management of the investments and other property of the Company. The main terms of the agreement with each investment adviser are that it should have the authority of the ACD to make decisions on its behalf in all aspects of the investment management of the investments and other property of the Company, including the Company's powers to enter into hedging transactions relating to efficient portfolio management. The adviser's powers extend to all of the property of the Company except any part which the ACD excludes from the adviser's powers. The adviser is to report details of each transaction to the ACD and to confer with the ACD when required by it. The ACD will notify the adviser of additional cash available for investment.

The ACD and Alternative Investment Fund Manager (the AIFM) of the Company is abrdn Fund Managers Limited, a private company limited by shares which was incorporated in England and Wales on 7 November 1962. Its ultimate holding company is Aberdeen Group plc ('Aberdeen'), which is incorporated in Scotland.

abrdn OEIC III is structured as an umbrella company. Each fund has the investment powers equivalent to those of a securities company.

The following items within each fund report form part of the Authorised Corporate Director's report: Investment Report, Comparative Tables, Synthetic Risk and Reward Indicator and Portfolio Statement.

Each fund has an individual investment objective and policy and each differs in regard to the extent to which they concentrate on achieving income or capital growth. There may be funds added to the umbrella of abrdn OEIC III (with consent of the FCA and the Depositary) in the future.

The funds are valued on a mid-price basis and dealt at a single price regardless of whether a purchase or sale is being affected. The daily price for each fund appears on the Aberdeen website at www.aberdeeninvestments.com.

The funds are segregated portfolios of assets and, accordingly, the assets of a fund belong exclusively to that fund and shall not be used to discharge directly or indirectly the liabilities of, or claims against, any other person or body, including the Company, or any other fund, and shall not be available for any such purpose.

Shareholders are not liable for the debts of the Company.

All fees charged by the Investment Adviser will be borne by the ACD.

The military offensive from Russia against Ukraine since February 2022 continues to pose widespread sanctions on Russian assets. Geopolitical events can adversely affect assets of funds and performance thereon. To ensure the fair treatment of investors, Aberdeen's Investor Protection Committee (IPC) undertakes regular reviews of market liquidity across each asset class and fund, making appropriate adjustments where necessary.

Aberdeen's Valuation and Pricing Committee (VPC) also continue to review the valuation of assets and the recoverability of income from those assets, making appropriate adjustments where necessary. The VPC is made up of a wide range of specialists across Aberdeen with a wide range of experience in asset pricing.

Cross-holding Information

There were no cross holdings between funds in abrdn OEIC III as at 31 December 2025 (30 June 2025: Nil).

Report of the Authorised Corporate Director (continued)

Developments and Prospectus Updates Since 30 June 2025

- On 11 July 2025, the following fund mergers took place:
 - abrdn MyFolio Market I Fund into abrdn MyFolio Index I Fund
 - abrdn MyFolio Market II Fund into abrdn MyFolio Index II Fund
 - abrdn MyFolio Market III Fund into abrdn MyFolio Index III Fund
 - abrdn MyFolio Market IV Fund into abrdn MyFolio Index IV Fund
 - abrdn MyFolio Market V Fund into abrdn MyFolio Index V Fund
- On 15 July 2025, Emma Herd was added to the board of directors for abrdn Fund Managers Limited.
- On 31 October 2025, the Institutional Inc shareclass for the abrdn Multi-Sector Credit Fund closed.
- Performance and dilution figures were refreshed, where appropriate.
- The list of eligible markets was refreshed, where appropriate.
- The list of funds managed by the ACD was updated, where appropriate.
- The list of sub-custodians was refreshed, where appropriate.
- The list of sub-investment advisors to the funds was refreshed, where appropriate.
- The risk disclosures in relation to the funds were refreshed, where appropriate.

Assessment of Value (unaudited)

In 2017 the Financial Conduct Authority (FCA) published the final Asset Management Market Study. This introduced (among other reforms) new governance rules with the aim of enhancing duty of care and ensuring the industry acts in investors' best interests. The rules were outlined in the FCA policy statement PS18/8 and came into effect from 30 September 2019. As a result, abrdn Fund Managers Limited is required to perform a detailed annual assessment, determining whether our funds are 'providing value to investors'. The resulting findings will be published on a composite basis throughout the year, and can be found on the 'Literature' pages of our website at www.aberdeeninvestments.com.

Climate-related Financial Disclosures (unaudited)

The recommendations by the Taskforce for Climate-related Financial Disclosures (TCFD) – initiated by the Financial Stability Board in 2015 and adopted in 2017 – provide organisations with a consistent framework for disclosing financial impacts of climate-related risks and opportunities. The disclosure in line with TCFD recommendations enables external stakeholders to gain a better understanding of the climate-related risks and opportunities (including how they are managed) that are likely to impact the organisation's future financial position as reflected in its income statement, cash flow statement, and balance sheet. The TCFD has developed 11 recommendations which are structured around four thematic areas, notably governance, strategy, risk management and metrics and target. In Policy Statement 21/24 the Financial Conduct Authority (FCA) have created a regulatory framework for asset managers, life insurers and FCA-regulated pension providers to make climate-related disclosures consistent with the recommendations of the TCFD. As a result of the disclosure requirements abrdn OEIC III is required to perform a detailed annual assessment, determining financial impacts of climate-related risks and opportunities. The resulting findings are published at Literature page of our website at www.aberdeeninvestments.com.

Authorised Corporate Director's Statement

In accordance with the requirements of the COLL sourcebook as issued and amended by the Financial Conduct Authority, we hereby certify the report on behalf of abrdn Fund Managers Limited, the Authorised Corporate Director.

Investment Report 1 July 2025 – 31 December 2025

abrdn OEIC III Global Overview

Global equities

Global stock markets rose in sterling terms and, to a lesser extent, local-currency terms over the six months under review, supported by strong corporate earnings and three 25-basis-point (bp) interest-rate cuts by the US Federal Reserve (Fed) in September, October and December, which reinforced expectations of a sustained easing cycle. From early October, a partial US government shutdown weighed on markets by disrupting the release of key economic data and increasing policy uncertainty, until a temporary funding agreement in mid-November extended government operations into January 2026. Softer US labour market data and signs of easing inflation later strengthened confidence that further rate cuts could be delivered. Global economic activity proved more resilient than expected over the period, helping to sustain risk appetite. At the sector level, technology stocks continued to advance on optimism around artificial intelligence, despite valuation-driven volatility in November, before sentiment improved again as expectations for monetary easing were reaffirmed.

UK

The UK stock market, as represented by the FTSE All-Share Index, recorded a gain in sterling terms over the six-month period, supported by a resilient global growth backdrop and easing trade tensions, which supported export-oriented sectors. The FTSE 100 Index outperformed the FTSE 250 Index, supported by its more international earnings base and greater exposure to higher commodity prices via energy and mining stocks, despite its defensive characteristics and limited exposure to the buoyant technology sector. By contrast, domestically oriented smaller-cap stocks underperformed as uncertainty around the UK growth outlook persisted. Fiscal policy also came into focus, with the Labour government's second Budget in November targeting roughly £26 billion of annual tax rises by 2029–30, increasing estimated fiscal headroom to about £22 billion. Economic momentum remained subdued, with third-quarter GDP expanding by only 0.1%, following 0.2% growth in the previous quarter. Annual headline inflation fell to 3.2% in November from 3.6% in October, while the core rate moderated to 3.2%; both measures were lower than expected but remained above the Bank of England (BoE)'s 2% target. Against this backdrop, the BoE cut the Bank Rate by 25 bps to 3.75% at its December meeting, marking the fourth reduction of the year.

US

US share prices, as measured by the broad S&P 500 Index, rose in sterling terms and, to a lesser extent, US dollar terms over the six-month period, driven by growing expectations of Fed rate cuts, optimism around artificial intelligence (AI), robust corporate earnings and improving US–China trade relations. Market conditions became more unsettled towards the end of the period as a prolonged US government shutdown weighed on sentiment before a temporary funding agreement was reached. This coincided with a bout of volatility in technology stocks linked to valuation concerns, although the sector later recovered as rate-cut expectations were reaffirmed. According to the advance estimate, US GDP grew at an annualised rate of 4.3% in the third quarter, exceeding expectations and accelerating from the previous quarter. Annual core Personal Consumption Expenditures inflation eased to 2.8% in September from 2.9% in August, remaining above the Fed's 2% target but coming in lower than expected. Against this backdrop, the Fed cut the federal funds target range by 25 bps at each of its September, October and December meetings, taking it to 3.50%–3.75%.

Europe

Continental Europe's stock markets, as measured by the FTSE World Europe ex UK Index, rose over the six-month period in sterling terms and, to a lesser extent, euro terms. Trade policy developments provided some relief, with the US opting to impose a 15% tariff on most EU goods at the end of July, below earlier threats. Political uncertainty in France increased after Prime Minister François Bayrou lost a confidence vote and was succeeded by Sébastien Lecornu, whose brief resignation in October was reversed as President Emmanuel Macron sought to preserve stability. Markets performed well in November and December. Eurozone output expanded by 0.3% quarter on quarter in the third quarter, exceeding expectations and improving on the previous quarter. Price pressures remained contained, with annual consumer price inflation at 2.1% in November, as expected, while the core rate was unchanged at 2.4%, a better outcome than forecast. Against this backdrop, the European Central Bank maintained a cautious policy stance, leaving the deposit facility rate unchanged at 2.00% over the period.

Japan

The Japanese stock market, as measured by the TOPIX Index, rose over the six-month period in sterling terms and, to a greater extent, yen terms, supported by solid corporate earnings and a continued focus by Japanese companies on shareholder returns. Political developments drew attention, with Sanae Takaichi becoming Japan's first female prime minister in October and unveiling a ¥21.3 trillion fiscal stimulus package the following month aimed at supporting growth. Economic momentum softened, with output contracting by 0.6% in the third quarter after expanding by 0.5% in the previous quarter. Annual core inflation held at 3.0% in November, remaining above target. In response, the Bank of Japan (BoJ) increased its short-term policy rate by 25 bps to 0.75% in December, signalling a further step in the gradual normalisation of monetary policy.

Investment Report 1 July 2025 – 31 December 2025 (continued)

abrdn OEIC III Global Overview

Emerging markets

Stock markets in the Asia Pacific (excluding Japan) region rose over the six-month period in sterling and local-currency terms, supported by improving risk appetite as inflation pressures eased globally. Performance across the region was mixed. Chinese equities made gains on the back of policy support and some easing in trade frictions with the US, although investor caution persisted given ongoing economic challenges, particularly in the property sector. Taiwan stood out as a strong performer, benefiting from its significant exposure to technology stocks and sustained AI-related demand. By contrast, Indian equities lagged regional peers despite robust economic growth, as foreign investor sentiment weakened amid concerns over potential US tariffs linked to India's Russian oil imports. India's economic data remained firm, with annual GDP expanding by 8.2% in the third quarter, accelerating from the previous period. In monetary policy, the Reserve Bank of India lowered its policy rate by 25 bps to 5.25% in December, as inflation continued to run below its 4% target.

Bond markets

Global government bonds rose in local-currency terms and by slightly more in sterling terms. Against a backdrop of elevated macroeconomic uncertainty, central banks largely adopted a cautious, data-driven approach, even as the Fed implemented three 25-bp rate cuts across September, October and December. Government bond yields moved higher in Germany and more markedly in Japan, reflecting ongoing tariff-related inflation concerns and rising anxiety around fiscal sustainability, despite intermittent safe-haven demand linked to the Russia-Ukraine war and tensions in the Middle East. In Japan, yield movements were further influenced by the BoJ's 25-bp rate increase in December as it continued its gradual policy normalisation. By contrast, US 10-year Treasury yields edged lower as moderating inflation and softer labour market indicators reinforced expectations of additional easing. In the UK, 10-year Gilt yields rose initially on fiscal uncertainty ahead of the Budget but later retraced those moves, ending the period broadly unchanged, supported by the BoE cutting the Bank Rate by 25 bps at its December meeting.

Corporate bonds performed well over the period as investor risk appetite remained buoyant. Investment-grade bonds benefited from expectations of further Fed rate cuts amid continued disinflation, as well as from their greater sensitivity to falling Treasury yields, which were supported by safe-haven demand linked to ongoing geopolitical tensions. High-yield bonds also delivered solid returns, underpinned by a relatively robust US economy and still-low default rates, despite periodic bouts of market volatility. Across both segments, strong company fundamentals – including healthy balance sheets, modest leverage and stable earnings – alongside supportive technical conditions such as limited new issuance, helped sustain investor confidence and kept spreads tight by historical standards. This was despite intermittent concerns around lingering inflation pressures and rising fiscal deficits in some major economies.

Investment Report 1 July 2025 – 31 December 2025 (continued)

Activity statement

Interim report from 1 July 2025 to 31 December 2025

Activity from 1 July 2025 to 31 December 2025

As of 31 December 2025, the abrdn OEIC III umbrella contains 25 sub-funds under the MyFolio brand. We split the 25 MyFolio sub-funds into five distinct groups and each has a different investment style.

MyFolio Core Portfolios – invest predominantly in funds managed by Aberdeen. We also have the option to invest in funds run by external fund managers where a suitable fund is not available within the Aberdeen range.

MyFolio Multi-Manager Portfolios – portfolios of carefully selected funds from some of the leading managers in the market.

MyFolio Index Portfolios – invest predominantly in index-tracking funds from Aberdeen. We also have the option to temporarily invest in the most suitable alternative asset classes and/or actively managed funds when a suitable tracker fund can't be found.

MyFolio Enhanced ESG Portfolios – invest mainly in funds with a specific sustainable or impact mandate.

MyFolio Enhanced ESG Index Portfolios – invest mainly in index-tracking funds but with additional sustainability considerations.

Strategic Asset Allocation

We review the strategic asset allocation (SAA) for all funds annually and monitor positions quarterly. The SAA is set by Aberdeen, drawing on both internal and external expertise, and targets the optimal asset mix for each portfolio's risk band over a 10-year investment horizon. Grounded in sound investment principles, it is long term, broadly diversified across differentiated asset classes and valuation aware.

Any enhancements made to the SAA must be compared with the alternative of making no change at all. Turnover must be considered carefully, and there must be a clear potential benefit from any changes we plan to make. Historically, we have made, on average, about one change every 12 months, but the frequency has increased more recently given the rapidly changing market dynamics. Despite this, there were no changes to the SAA over the six-month period.

Tactical Asset Allocation

We have made some changes to reflect the current market environment. We are now leaning more towards a pro-growth stance, adding exposure to corporate assets and reducing interest-rate risk.

Developed markets, led by the US, remain in a late-cycle optimism phase. Growth is resilient, inflation is cooling and central banks are starting to ease policy. While tariff shocks and geopolitical tensions add uncertainty, supportive fiscal policies are helping to keep the cycle intact. Historically, this stage tends to favour equities early on, with bonds performing later.

In terms of short-term signals, recent data has been mixed, including pauses in US macro indicators, growing concerns over an artificial intelligence bubble, a hawkish tone from the US Federal Reserve (Fed) and emerging liquidity stress in US money markets.

Despite this, we expect the Fed to end quantitative tightening soon and to support growth if data weakens. The US government is set to release US\$1 trillion from its Treasury account, third-quarter earnings look solid and consumers should benefit from tax rebates in early 2026. Overall, we believe the pro-growth path remains the most likely.

Portfolio changes included an increase in the equities allocation of 1.5%, split evenly across the UK, US and Japan. UK equities are supported by global growth and a weaker pound, with around 70% of FTSE 100 earnings generated overseas. US equities benefit from Fed easing and continued technology momentum, while Japanese equities are underpinned by governance reforms, increased buybacks and expected fiscal rate-cutting under the new prime minister. These increases were funded by reductions in global government bonds and global investment-grade credit. In foreign exchange, we added a long euro versus short sterling position with a 2% notional allocation, reflecting our view that investors are underestimating Bank of England rate cuts amid disinflation and fiscal tightening, while the European Central Bank is nearing the end of its cutting cycle against a backdrop of stronger eurozone growth.

In terms of risk management, we are mindful of high valuations in global equities, so we are diversifying outside the US and using only about half of our full risk budget.

Investment Report 1 July 2025 – 31 December 2025 (continued)

Activity statement

Interim report from 1 July 2025 to 31 December 2025

Underlying Fund Holdings

In terms of the underlying funds, the final phase of the transition from the former MyFolio Managed portfolios to the MyFolio **Core** range was completed, moving holdings into zero-fee share classes across the underlying abrdn funds. Also in MyFolio **Core**, we fully sold our holdings in the abrdn Europe ex UK Equity Fund and the abrdn UK Value Equity Fund as part of our transition to the unfettered approach. This reflected the planned, gradual phasing out of these holdings. As part of our move towards holding zero-fee paying share classes and consolidating the offering, the global real estate investment trusts (REITs) allocation within MyFolio **Multi-Manager** was fully invested in the abrdn Global REIT Tracker Fund.

Cautionary note

You should remember that past performance is not a guide to future performance. The value of investments may go down as well as up. Therefore, you may not get back the amount originally invested.

Neither the Owner nor any other third party sponsors, endorses or promotes the fund or product to which Third Party Data relates. abrdn means the relevant member of abrdn group, being abrdn plc together with its subsidiaries, subsidiary undertakings and associated companies (whether direct or indirect) from time to time.

Notes to the Financial Statements of abrdn OEIC III for the six months ended 31 December 2025

Basis of Accounting

The financial statements for each of the funds have been prepared under the historical cost basis, as modified by the revaluation of investments, and in accordance with the Statement of Recommended Practice (SORP) for Financial Statements of Authorised Funds issued by the Investment Management Association in May 2014 (IMA SORP 2014), Financial Reporting Standard (FRS) 102 and United Kingdom Generally Accepted Accounting Practice.

For all funds apart from abrdn Dynamic Multi Asset Growth Fund, abrdn MyFolio Market I Fund, abrdn MyFolio Market II Fund, abrdn MyFolio Market III Fund, abrdn MyFolio Market IV Fund, abrdn MyFolio Market V Fund and abrdn Multi-Sector Fund the ACD has undertaken a detailed assessment, and continues to monitor, each fund's ability to meet its liabilities as they fall due, including liquidity, declines in global capital markets and investor redemption levels. Based on this assessment, the funds continue to be open for trading for at least the next 12 months and the ACD is satisfied the funds have adequate financial resources to continue in operation and accordingly it is appropriate to adopt the going concern basis in preparing the financial statements.

abrdn Dynamic Multi Asset Growth Fund is no longer open to investors having redeemed all shares on 23 May 2023. It is the intention of the ACD to terminate the fund at a later date once the residual assets and liabilities are settled. On 11 July 2025 the ACD merged the MyFolio Market funds into the MyFolio Index funds. It is the intention of the ACD to close abrdn Multi-Sector Credit Fund on 27 March 2026. As a result, the financial statements for abrdn Dynamic Multi Asset Growth Fund, abrdn MyFolio Market I Fund, abrdn MyFolio Market II Fund, abrdn MyFolio Market III Fund, abrdn MyFolio Market IV Fund, abrdn MyFolio Market V Fund and abrdn Multi-Sector Credit Fund have not been prepared on a going concern basis.

For the funds not prepared on a going concern basis, no adjustments were required to the financial statements to adjust assets or liabilities to their realisable values or to provide for liabilities arising from the decision to terminate the fund. No liabilities have been recorded for costs of the termination as the intention is that the Authorised Corporate Director will bear any such costs which may arise.

Distribution Policy

All of the net revenue available for distribution at the year end will be distributed. Where a fund has accumulation shareholders, this will be reinvested. Where a fund has income shareholders, this will be paid.

Where the ACD has discretion about the extent to which revenue and expenses are recognised within the distributable income property of the fund, the approach adopted, at all times, will be governed by the aim of maximising the total return to shareholders through limiting avoidable taxation costs.

Where expenses are charged to capital, or returned equalisation is not allocated back to the investment, this will increase the distribution with a corresponding reduction to capital. For the purposes of calculating the distribution the effect of marginal tax relief between capital and revenue is not incorporated.

Gains and losses on non-derivative investments and currencies, whether realised or unrealised, are taken to capital and are not available for distribution. Cash flows associated with derivative transactions are allocated between the revenue and capital property of the funds according to the motives and circumstances of the particular derivative strategy. The investment manager articulates the motives and circumstances underlying the derivative strategy and the ACD assesses these in association with financial reporting constraints enshrined within the SORP to allocate the cash flows accordingly.

abrdn Multi-Sector Credit Fund for the six months ended 31 December 2025

Investment Objective

To generate income and some growth over the long term (5 years or more) by investing both directly and indirectly in bonds issued anywhere in the world.

Performance Target: To exceed the return of SONIA by 2.50% per annum over rolling five year periods (before charges).

The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target. SONIA is currently used as a proxy for the return on cash deposits.

The ACD believes this is an appropriate target for the fund based on the investment policy of the fund.

Investment Policy

Portfolio Securities

- The fund will have at least 70% exposure to bonds issued anywhere in the world by governments, sub-sovereigns and corporations, including investment grade, emerging market, high yield, convertible, asset backed and mortgage backed bonds.
- The fund may also invest in loans issued anywhere in the world including senior, secured, unsecured and subordinated loans up to 25%.
- Up to 20% of the fund may be invested in asset backed and mortgage backed bonds.
- The fund will gain exposure to a diversified portfolio of bonds and loans from across the global fixed income universe by investing both directly and indirectly via other funds (including those managed by Aberdeen Investments).
- The fund may also invest in money market instruments and cash.
- The fund will employ techniques to reduce (hedge) risk related to currency movements on non-Sterling bonds.
- Some assets in which the fund invests are not valued on a daily basis and consequently the fund's share price may not reflect the true value of the fund's assets. Some assets may also have non-daily dealing frequencies and/or longer settlement cycles than the fund itself, which may require the fund to hold additional cash, sell other assets or temporarily borrow to meet short-term liquidity needs, such as redemption requests.

Management Process

- The management team use their discretion (active management) to strategically allocate investment across a diverse range of fixed income asset classes in order to achieve the fund's objective. The portfolio will consist of allocations to what the management team define as core, tactical and thematic asset classes.
- The core allocation is expected to account for a minimum of 50% of the portfolio and consists of investment grade corporate bonds with a maturity of 1-5 years, leveraged loans and asset backed and mortgage backed bonds.
- The tactical allocation is expected to account for a maximum of 40% of the portfolio and consists of investment grade corporate bonds with a maturity of over 10 years, sovereign bonds, global high yield bonds and emerging market corporate bonds.
- The thematic allocation is expected to account for a maximum of 20% of the portfolio and consists of positions identified by the management team as value opportunities or areas with the potential to enhance returns, such as Asian bonds, subordinated bonds and corporate hybrids.
- The team also seek to reduce the risk of losses and the expected change (as measured by annual volatility) in the value of the fund, is not ordinarily expected to exceed 5%.

Please Note: The fund's ability to buy and sell bonds and the associated costs can be affected during periods of market stress which could include periods where interest rates move sharply.

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to manage expected changes in interest rates, inflation, currencies or creditworthiness of corporations or governments.

abrdn Multi-Sector Credit Fund for the six months ended 31 December 2025 (continued)

- The fund will routinely use contracts on credit default swap indices in order to manage cash flows. These indices will be consistent with the objective and risk profile of the fund.
- The fund may also invest in other funds which use derivatives more extensively.

Performance Review

Over the six-month period to end December 2025, the fund produced a positive total return of 3.02%*. The fund has no specific credit benchmark, but its performance target is its cash benchmark, the Sterling Overnight Index Average (SONIA +2.5%, hedged to sterling) which returned 2.00%**.

Companies selected for illustrative purposes only to demonstrate the investment management style described herein and not as an investment recommendation or indication of future performance.

The fund had a positive total return ahead of its cash return and performed roughly in line with global corporate bonds, as represented by the Bloomberg Global Aggregate – Corporates Index (hedged to sterling).

In terms of individual direct holdings, the top contributors over the six months included the fund's UK water holdings, with the sector continuing to outperform after previous weakness. Thames Water, Yorkshire Water (Kelda) and Anglian Water were among the top performers, with Thames Water's super senior notes that were issued last year performing particularly well.

Among the fund's banking holdings, the bonds from Just Group (insurance), KBC Group and Coventry Building Society (The Co-operative Bank) were among the top contributors. There were no negative contributors for the fund over the six months, but several banking holdings were among the relative laggards. This included Banco Santander, Bank of Nova Scotia, CaixaBank, Novo Banco, BBVA, Banco Sabadell and Rothesay.

Utility name Ørsted was also among the top-returning holdings for the fund. Underlying government bonds also produced positive returns for the fund.

Our core exposure to short-dated global investment grade (IG) credit was again a strong positive contributor to the fund's returns. Elsewhere, the fund's positioning in high yield (HY), Asian credit and emerging-market (EM) credit also positively contributed to performance over the six months. The relatively small allocation (2%) to global loans was positive, but lagged the other exposures.

Market Review

Global credit markets had a positive six months, helped by global central banks continuing to cut rates. Overall, total returns were positive across the board in global credit markets, with HY slightly outperforming IG and EM sovereigns the clear winner. Spreads tightened earlier in the period, particularly in UK IG credit markets, which witnessed more pronounced moves than those in global IG and HY markets. Credit spreads had a relatively quiet final three months of the year, with most indices unchanged to up to 3 basis points (bps) wider across IG and HY. The standout performer was EM sovereigns, where spreads tightened by 30bps.

An interesting development came around late October and early November, with some blockbuster technology debt issuance from the likes of Meta, Alphabet (Google) and Oracle. This led to a small wobble in IG credit spreads as the market repriced on the back of these large deals coming at a discount to secondary markets. For the first time, it felt like investors were becoming more sceptical over the artificial intelligence (AI) complex, in terms of how it will be funded and when the revenues will be captured.

Government bond yields were relatively volatile throughout the six months. Yields were higher earlier in the period due to stickier inflation and concerns over UK Chancellor Rachel Reeve's fiscal headroom in the Autumn Budget. The hawkish 25bp cut from the Bank of England (BoE) in August was also another reason for Gilt yields to move higher. However, Gilts were

abrdn Multi-Sector Credit Fund for the six months ended 31 December 2025 (continued)

the clear outperformer in the final months of the year, making up some lost ground after a period of underperformance driven by political risk and fiscal uncertainty. The BoE also cut rates for the fourth time in 2025 in December, taking the Bank Rate down to 3.75%.

In the US, weaker US jobs data released in early September led to the Federal Reserve cutting rates later in the month, the first time since December 2024. As a result, Treasury yields fell but remained broadly unchanged thereafter, amid continued easing by the Fed. Policymakers cut rates in October and December, with the federal funds rate finishing the year at a range of 3.5–3.75%. This was largely expected and formed part of the mix that kept fixed income markets well supported by investors over the period. In Europe, Bunds moved higher over the six months, with curves steepening due to hawkish comments from some European Central Bank (ECB) members that rates may increase in 2026.

Portfolio Activity and Review

Over the third quarter, with credit markets rallying sharply, we took the opportunity to increase exposure to government bonds as a gradual de-risking of the fund. We also marginally increased exposure to global HY and EMs, where we still see some value. In terms of individual names, we added a new holding in Rothesay (Additional Tier 2 debt) and also purchased Thames Water super senior notes. On the other hand, we sold the Tier 2 debt of RBC, Banco Santander and Lloyds, as well as the corporate hybrids of Volkswagen and Telefonica.

There was no significant shift in asset allocation over the fourth quarter but as credit spreads tightened, we continued to gradually de-risk through building up cash and government bonds. In terms of specific exposures, we reduced global loans, and sold out of Thames Water, European property name Aroundtown and Westpac subordinated bonds.

The fund finished the period with 17% exposure in cash and government bonds, which was significantly higher than 12 months ago when the fund was running with less than 5%. We finished the year with a total exposure of 23% in HY and 11% in EMs. We have focused our exposure in short-dated IG credit, based on the current market backdrop.

The fund's duration closed the period at 4.2 years, having been reduced at the end of the third quarter from closer to 5 years, which would be towards the top end of our historical range. The fund's yield was 5.02% at the end of the year, with the average credit rating at BBB/BBB+.

Portfolio Outlook and Strategy

We enter 2026 with credit spreads at their tightest levels since before the onset of the Global Financial Crisis. Many popular risk-on areas, such as HY, subordinated financials and EM debt, have had a very good run over the last two years. Yet, flows into fixed income markets continue and the large amount of bond issuance already witnessed in early 2026 is being met with huge demand. According to JP Morgan, we have had the second-biggest day of corporate issuance in history in the US and the biggest day of European issuance. The reason is that investors are still attracted to the overall yields on offer, which remain comfortably above the average levels of the last 20 years. Additionally, it is unlikely that the ECB will raise rates this year and there could be another two cuts in the US, driven by a dovish new Fed Chair, which would further build confidence.

From a macro perspective, things are largely stagnant in Europe while the US continues to motor on through further AI investment. It is worth noting that, historically, low growth in the 1–2% range is an ideal condition for IG credit spreads, that is to say 'not too hot or too cold'.

Fundamentals have to be looked at on a sector by sector basis, but generally are okay, as you would expect from the prevailing macro environment. Banks are doing particularly well and sentiment is improving in the likes of real estate. Autos have many challenges, with the credit trend generally weakening, while chemicals and basic materials are yet to come out of their downturn. The technology sector will likely face more scrutiny, specifically AI deliverance and funding.

So where does it leave us? Credit spreads are tight and can remain tight for longer, and we think they will be largely range bound with perhaps some mild widening over the next six months. Spreads can tighten from here but should not be expected.

Duration is far harder to call than last year. Markets are largely priced for any further rate cuts in the US, while curves are likely to steepen a little further in our base case.

So the question arises, to access attractive yield, how much risk and duration are we willing to take to achieve it? We have reduced the fund's overall HY exposure and bolstered cash and government bond exposure, as mentioned above. We have also reduced duration a little into year-end.

Within this context of slightly lower risk levels in the fund, we continue to like banks (expecting senior bank debt to trade through non-financials again in the coming months), utilities and telecommunications. Short-dated subordinated bonds

abrdn Multi-Sector Credit Fund for the six months ended 31 December 2025 (continued)

with call dates within two years still makes sense to us here. Elsewhere, we continue to look for the best opportunities across EMs and Asia, along with selective low BBB and BB rated ideas to supplement yield.

Coming back to technology issuance as a big theme that emerged in the fourth quarter of 2025, UBS now believes that US\$900 billion of issuance will come from the wider sector this year, 60% of which will be in the public market. These are undoubtedly large numbers but can be taken down, with small periods of indigestion. So, there will be opportunities to play the sector tactically in the year ahead.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk			Typically higher rewards, higher risk			
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 3 because of the extent to which the following risk factors apply:

- Credit Risk – The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- Interest Rate Risk – The fund invests in securities which can be subject to price fluctuation for a variety of reasons including changes in interest rates or inflation expectations.
- High Yield Credit Risk – The fund invests in high yield bonds which typically carry a greater risk of default than those with lower yields.
- Emerging Markets Risk – The fund may invest in emerging markets, where political, economic, legal and regulatory systems are less developed. As a result, investing in emerging markets may involve higher volatility and a greater risk of loss than investing in developed markets. In particular, where the fund invests in Variable Interest Entity (VIE) structures to gain exposure to industries with foreign ownership restrictions or invests in Chinese assets via Stock Connect / Bond Connect, there are additional operational risks, which are outlined in the prospectus.
- ABS / MBS Risk – Asset and mortgage backed securities are subject to prepayment and extension risk and additional liquidity and default risk compared to other credit securities.
- Derivatives Risk – The use of derivatives may involve additional liquidity, credit and counterparty risks and may lead to substantial loss and increased volatility in adverse market conditions. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- Convertible Securities Risk – These investments can be changed into another form upon certain triggers as such they can exhibit risks typically associated with both bonds and equities. Contingent convertible securities (CoCos) are similar to convertible securities but have additional triggers which mean that they are more vulnerable to losses and volatile price movements and hence become less liquid.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

abrdn MyFolio Core I Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Core range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level I, which aims to be the lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 20-40% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest its assets in actively and passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- Typically, at least 50% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), commercial property and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Core I Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator. The risk and reward indicator changed from 4 to 3 on 9 September 2025.

Typically lower rewards, lower risk			Typically higher rewards, higher risk			
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 3 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and/or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

abrdn MyFolio Core I Fund for the six months ended 31 December 2025 (continued)

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A Institutional S Fixed Accumulation share class launched on 14 April, closed on 11 September and re-launched on 1 October 2025.

^B Platform 1 Accumulation share class was closed on 20 November 2024.

^C Platform 1 Income share class was closed on 20 November 2024.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Core II Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Core range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level II, which aims to be the second lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 35-55% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest its assets in actively and passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- Typically, at least 40% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), commercial property and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class with the aim of improving returns).
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Core II Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

abrdn MyFolio Core II Fund for the six months ended 31 December 2025 (continued)

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A Institutional S Fixed Accumulation share class launched on 14 April, closed on 11 September and re-launched on 1 October 2025.

^B Platform 1 Accumulation share class was closed on 20 November 2024.

^C Platform 1 Income share class was closed on 20 November 2024.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Core III Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Core range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level III, which aims to be the middle risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 45–75% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest its assets in actively and passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- Typically, at least 25% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), commercial property and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Core III Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and/or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

abrdn MyFolio Core III Fund for the six months ended 31 December 2025 (continued)

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A Institutional S Fixed Accumulation share class launched on 14 April, closed on 11 September and re-launched on 1 October 2025.

^B Platform 1 Accumulation share class was closed on 20 November 2024.

^C Platform 1 Income share class was closed on 20 November 2024.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Core IV Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Core range, which offers five funds with different expected combinations of investment risk and return. This fund is risk level IV, which aims to be the second highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 60–90% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest its assets in actively and passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- Typically, at least 60% of the fund will be invested in assets traditionally viewed as being higher risk such as equities (company shares), commercial property, alternative funds and emerging market bonds (loans to an emerging market government).
- The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company) and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as whole on pages 6 to 10.

abrdn MyFolio Core IV Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator. The risk and reward indicator changed from 5 to 4 on 9 September 2025.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and/or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A Institutional S Fixed Accumulation share class launched on 14 April, closed on 11 September and re-launched on 1 October 2025.

^B Platform 1 Accumulation share class was closed on 20 November 2024.

^C Platform 1 Income share class was closed on 20 November 2024.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Core V Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Core range, which offers five funds with different expected combinations of investment risk and return. This fund is risk level V, which aims to be the highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 70-110% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest its assets in actively and passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- Typically, at least 80% of the fund will be invested in assets traditionally viewed as being higher risk such as such as equities (company shares), commercial property, alternative funds and emerging market bonds (loans to an emerging market government).
- The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company) and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Core V Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and/or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Enhanced ESG I Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Enhanced ESG range, which offers five funds with different expected combinations of investment risk and return that adhere to the abrdn MyFolio Enhanced ESG assessment criteria. The fund is risk level I, which aims to be the lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 20–40% of world stock markets (represented by the MSCI AC World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest its assets in actively and passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- Typically, at least 50% of the fund's assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares) high yield corporate bonds (loans to a company) and emerging market bonds (loans to an emerging market government).
- At least 50% of the fund's portfolio will have sustainability characteristics, which means the fund will invest at least 50% in funds which have explicit sustainability related targets, such as improved environmental, social and/or governance (ESG) outcomes or positive sustainability related contributions assessed in accordance with the abrdn MyFolio Enhanced ESG assessment criteria (the "Assessment Criteria") which can be found in Appendix VI in the prospectus.
- The fund may also invest in funds that apply ESG or sustainability criteria but do not set any specific sustainability related targets, or funds which have no specific ESG or sustainability criteria within their investment objective or process. These investments are used to provide diversification and deliver growth and may include funds applying only screening criteria, investments which are used for cash management purposes or assets that do not have any explicit sustainable characteristics, such as government bonds (loans to a government).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long term proportions in each asset class) meets the fund's objectives and policy.
- The management team will analyse the underlying funds and their investments to assess the extent to which they align with the Assessment Criteria. Further to this, the management team will meet with the fund managers to discuss the underlying fund's philosophy.
- The management team will only invest in funds that have a firm level active engagement and voting policy.
- Additionally, the management team assess all underlying funds against a set of exclusions relative to the respective asset class. For companies, these are related to the UN Global Compact, Controversial Weapons, Tobacco Production and Thermal Coal, whilst for government bonds, these are related to UN sanctions. More details around the screens can be found in the Assessment Criteria in Appendix VI in the prospectus.
- No more than 1% of the overall fund can be exposed to underlying fund holdings in breach of these exclusions at any one time.
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express tactical asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.

abrdn MyFolio Enhanced ESG I Fund for the six months ended 31 December 2025 (continued)

- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.
- Derivatives are exempt from the Assessment Criteria.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Enhanced ESG I Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.
- The fund invests in emerging market equities and/or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Comparative Tables

Institutional B Fixed Accumulation	31 December 2025	30 June 2025	30 June 2024	30 June 2023

Platform P Fixed Accumulation^A	31 December 2025	30 June 2025	30 June 2024	30 June 2023
Closing net asset value (£'000)	-	-	98	64
Closing number of shares	-	-	198,111	137,336
Closing net asset value per share (pence)	-	-	49.22	46.34
Change in net asset value per share	-%	-%	6.21%	1.56%
Operating charges	-%	-%	0.65%	0.65%

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A Platform P Fixed Accumulation share class was closed on 20 November 2024.

abrdn MyFolio Enhanced ESG II Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Enhanced ESG range, which offers five funds with different expected combinations of investment risk and return that adhere to the abrdn MyFolio Enhanced ESG assessment criteria. The fund is risk level II, which aims to be the second lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 35–55% of world stock markets (represented by the MSCI AC World Index) over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest its assets in actively and passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- Typically, at least 40% of the fund's assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), high yield corporate bonds (loans to a company) and emerging market bonds (loans to an emerging market government).
- At least 60% of the fund's portfolio will have sustainability characteristics, which means the fund will invest at least 60% in funds which have explicit sustainability related targets, such as improved environmental, social and/or governance (ESG) outcomes or positive sustainability related contributions assessed in accordance with the abrdn MyFolio Enhanced ESG assessment criteria ("Assessment Criteria") which can be found in Appendix VI in the prospectus.
- The fund may also invest in funds that apply ESG or sustainability criteria but do not set any specific sustainability related targets, or funds which have no specific ESG or sustainability criteria within their investment objective or process. These investments are used to provide diversification and deliver growth and may include funds applying only screening criteria, investments which are used for cash management purposes or assets that do not have any explicit sustainable characteristics, such as government bonds (loans to a government).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long term proportions in each asset class) meets the fund's objectives and policy.
- The management team will analyse the underlying funds and their investments to assess the extent to which they align with the Assessment Criteria. Further to this, the management team will meet with the fund managers to discuss the underlying fund's philosophy.
- The management team will only invest in funds that have a firm level active engagement and voting policy.
- Additionally, the management team assess all underlying funds against a set of exclusions relative to the respective asset class. For companies, these are related to the UN Global Compact, Controversial Weapons, Tobacco Production and Thermal Coal; whilst for government bonds, these are related to UN sanctions. More details around the screens can be found in the Assessment Criteria in Appendix VI.
- No more than 1% of the overall fund can be exposed to underlying fund holdings in breach of these exclusions at any one time.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express tactical asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.

abrdn MyFolio Enhanced ESG II Fund for the six months ended 31 December 2025 (continued)

- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.
- Derivatives are exempt from the Assessment Criteria.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.
- The fund invests in emerging market equities and/or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Comparative Tables

Institutional B Fixed Accumulation	31 December 2025	30 June 2025	30 June 2024	30 June 2023

abrdn MyFolio Enhanced ESG III Fund for the period ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Enhanced ESG range, which offers five funds with different expected combinations of investment risk and return that adhere to the abrdn MyFolio Enhanced ESG assessment criteria. The fund is risk level III, which aims to be the middle risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 45–75% of world stock markets (represented by the MSCI AC World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest its assets in actively and passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- Typically, at least 25% of the fund's assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), high yield corporate bonds (loans to a company) and emerging market bonds (loans to an emerging market government).
- At least 70% of the fund's portfolio will have sustainability characteristics, which means the fund will invest at least 70% in funds which have explicit sustainability related targets, such as improved environmental, social and/or governance (ESG) outcomes or positive sustainability related contributions assessed in accordance with the abrdn MyFolio Enhanced ESG assessment criteria ("Assessment Criteria") which can be found in Appendix VI in the prospectus.
- The fund may also invest in funds that apply ESG or sustainability criteria but do not set any specific ESG or sustainability criteria within their investment objective or process. These investments are used to provide diversification and deliver growth and may include funds applying only screening criteria, investments which are used for cash management purposes or assets that do not have any explicit sustainable characteristics, such as government bonds (loans to a government).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long term proportions in each asset class) meets the fund's objectives and policy.
- The management team will analyse the underlying funds and their investments to assess the extent to which they align with the Assessment Criteria. Further to this, the management team will meet with the fund managers to discuss the underlying fund's philosophy.
- The management team will only invest in funds that have a firm level active engagement and voting policy.
- Additionally, the management team assess all underlying funds against a set of exclusions relative to the respective asset class. For companies, these are related to the UN Global Compact, Controversial Weapons, Tobacco Production and Thermal Coal; whilst for government bonds, these are related to UN sanctions. More details around the screens can be found in the Assessment Criteria in Appendix VI in the prospectus.
- No more than 1% of the overall fund can be exposed to underlying fund holdings in breach of these exclusions at any one time.
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express tactical asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.

abrdn MyFolio Enhanced ESG III Fund for the period ended 31 December 2025 (continued)

- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.
- Derivatives are exempt from the Assessment Criteria.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdrn MyFolio Enhanced ESG IV Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdrn MyFolio Enhanced ESG range, which offers five funds with different expected combinations of investment risk and return that adhere to the abrdrn MyFolio Enhanced ESG assessment criteria. This fund is risk level IV, which aims to be the second highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 60-90% of world stock markets (represented by the MSCI AC World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest its assets in actively and passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- Typically, at least 60% of the fund will be invested in assets traditionally viewed as being higher risk such as equities (company shares), high yield corporate bonds (loans to a company) and emerging market bonds (loans to an emerging market government).
- The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- At least 70% of the fund's portfolio will have sustainability characteristics, which means the fund will invest at least 70% in funds which have explicit sustainability related targets, such as improved environmental, social and/or governance (ESG) outcomes or positive sustainability related contributions assessed in accordance with the abrdrn MyFolio Enhanced ESG assessment criteria ("Assessment Criteria") which can be found in Appendix VI to this prospectus.
- The fund may also invest in funds that apply ESG or sustainability criteria but do not set any specific ESG or sustainability criteria within their investment objective or process. These investments are used to provide diversification and deliver growth and may include funds applying only screening criteria, investments which are used for cash management purposes or assets that do not have any explicit sustainable characteristics, such as government bonds (loans to a government).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long term proportions in each asset class) meets the fund's objectives and policy.
- The management team will analyse the underlying funds and their investments to assess the extent to which they align with the Assessment Criteria. Further to this, the management team will meet with the fund managers to discuss the underlying fund's philosophy.
- The management team will only invest in funds that have a firm level active engagement and voting policy.
- Additionally, the management team assess all underlying funds against a set of exclusions relative to the respective asset class. For companies, these are related to the UN Global Compact, Controversial Weapons, Tobacco Production and Thermal Coal, whilst for government bonds, these are related to UN sanctions. More details around the screens can be found in the Assessment Criteria in Appendix VI.
- No more than 1% of the overall fund can be exposed to underlying fund holdings in breach of these exclusions at any one time.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express tactical asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.

abrdn MyFolio Enhanced ESG IV Fund for the six months ended 31 December 2025 (continued)

- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.
- Derivatives are exempt from the Assessment Criteria.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Comparative Tables

Institutional B Fixed Accumulation	31 December 2025	30 June 2025	30 June 2024	30 June 2023
Closing net asset value (£'000)	14,833	11,870	10,414	9,116
Closing number of shares	22,024,869	19,573,662	17,896,057	17,300,694

Change in net asset value per share	-%	-%	10.41%	7.30%
Operating charges	-%	-%	0.65%	0.65%

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A Platform P Fixed Accumulation share class was closed on 20 November 2024.

abrdn MyFolio Enhanced ESG V Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Enhanced ESG range, which offers five funds with different expected combinations of investment risk and return that adhere to the abrdn MyFolio Enhanced ESG assessment criteria. This fund is risk level V, which aims to be the highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 70–110% of world stock markets (represented by the MSCI AC World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest its assets in actively and passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- Typically, at least 80% of the fund will be invested in assets traditionally viewed as being higher risk such as equities (company shares), high yield corporate bonds (loans to a company) and emerging market bonds (loans to an emerging market government).
- The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- At least 70% of the fund's portfolio will have sustainability characteristics, which means the fund will invest at least 70% in funds which have explicit sustainability related targets such as improved environmental, social and/or governance (ESG) outcomes or positive sustainability related contributions assessed in accordance with the abrdn MyFolio Enhanced ESG assessment criteria ("Assessment Criteria") which can be found in Appendix VI to this prospectus.
- The fund may also invest in funds that apply ESG or sustainability criteria but do not set any specific ESG or sustainability criteria within their investment objective or process. These investments are used to provide diversification and deliver growth and may include funds applying only screening criteria, investments which are used for cash management purposes or assets that do not have any explicit sustainable characteristics, such as government bonds (loans to a government).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long term proportions in each asset class) meets the fund's objectives and policy.
- The management team will analyse the underlying funds and their investments to assess the extent to which they align with the Assessment Criteria. Further to this, the management team will meet with the fund managers to discuss the underlying fund's philosophy.
- The management team will only invest in funds that have a firm level active engagement and voting policy.
- Additionally, the management team assess all underlying funds against a set of exclusions relative to the respective asset class. For companies, these are related to the UN Global Compact, Controversial Weapons, Tobacco Production and Thermal Coal, whilst for government bonds, these are related to UN sanctions. More details around the screens can be found in the Assessment Criteria in Appendix VI.
- No more than 1% of the overall fund can be exposed to underlying fund holdings in breach of these exclusions at any one time.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express tactical asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.

abrdn MyFolio Enhanced ESG V Fund for the six months ended 31 December 2025 (continued)

- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.
- Derivatives are exempt from the Assessment Criteria.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

abrdn MyFolio Enhanced ESG Index I Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Enhanced ESG Index range, which offers five funds with different expected combinations of investment risk and return that adhere to the abrdn MyFolio Enhanced ESG assessment criteria. The fund is risk level I, which aims to be the lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 20-40% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- The fund may invest up to 20% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 50% of the fund's assets will be the ones traditionally viewed as lower risk, such as cash, money-market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including REITs), high yield corporate bonds (loans to a company) and emerging market bonds (loans to an emerging market government).
- At least 50% of the fund's portfolio will have sustainability characteristics, which means the fund will invest at least 50% in funds which have explicit sustainability related targets such as improved environmental, social and/or governance (ESG) outcomes or positive sustainability related contributions assessed in accordance with the abrdn MyFolio Enhanced ESG assessment criteria ("Assessment Criteria") which can be found in Appendix VI in the prospectus.
- The fund may also invest in funds that apply ESG or sustainability criteria but do not set any specific sustainability related targets, or funds which have no specific ESG or sustainability criteria within their investment objective or process. These investments are used to provide diversification and deliver growth and may include funds applying only screening criteria, investments which are used for cash management purposes or assets that do not have any explicit sustainable characteristics, such as global government bonds (loans to a government).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives and policy.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- The management team will analyse the underlying funds and their investments to assess the extent to which they align with the Assessment Criteria. Further to this, the management team will meet with the fund managers to discuss the underlying fund's philosophy.
- The management team will only invest in funds that have a firm level active engagement and voting policy.
- Additionally, the management team assess all underlying funds against a set of exclusions relative to the respective asset class. For companies, these are related to the UN Global Compact, Controversial Weapons, Tobacco Production and Thermal Coal whilst for government bonds, these are related to UN sanctions. More details around the screens can be found in the Assessment Criteria in Appendix VI in the prospectus.
- No more than 1% of the overall fund can be exposed to underlying fund holdings in breach of these exclusions at any one time.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").

abrdn MyFolio Enhanced ESG Index I Fund for the six months ended 31 December 2025 (continued)

- Derivatives include instruments used to express tactical asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.
- Derivatives are exempt from the Assessment Criteria.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Enhanced ESG Index I Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Comparative Tables

Institutional B Fixed Accumulation	31 December 2025	30 June 2025	30 June 2024	30 June 2023
Closing net asset value (£'000)	845	697	393	1

abrdn MyFolio Enhanced ESG Index II Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Enhanced ESG Index range, which offers five funds with different expected combinations of investment risk and return that adhere to the abrdn MyFolio Enhanced ESG assessment criteria. The fund is risk level II, which aims to be the second lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 35–55% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- The fund may invest up to 20% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 40% of the fund's assets will be the ones traditionally viewed as lower risk, such as cash, money-market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including REITs), high yield corporate bonds (loans to a company) and emerging market bonds (loans to an emerging market government).
- At least 60% of the fund's portfolio will have sustainability characteristics, which means the fund will invest at least 60% in funds which have explicit sustainability related targets such as improved environmental, social and/or governance (ESG) outcomes or positive sustainability related contributions assessed in accordance with the abrdn MyFolio Enhanced ESG assessment criteria ("Assessment Criteria") which can be found in Appendix VI to this prospectus.
- The fund may also invest in funds that apply ESG or sustainability criteria but do not set any specific sustainability related targets, or funds which have no specific ESG or sustainability criteria within their investment objective or process. These investments are used to provide diversification and deliver growth and may include funds applying only screening criteria, investments which are used for cash management purposes or assets that do not have any explicit sustainable characteristics, such as global government bonds (loans to a government).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives and policy.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- The management team will analyse the underlying funds and their investments to assess the extent to which they align with the Assessment Criteria. Further to this, the management team will meet with the fund managers to discuss the underlying fund's philosophy.
- The management team will only invest in funds that have a firm level active engagement and voting policy.
- Additionally, the management team assess all underlying funds against a set of exclusions relative to the respective asset class. For companies, these are related to the UN Global Compact, Controversial Weapons Tobacco Production and Thermal Coal whilst for government bonds, these are related to UN sanctions. More details around the screens can be found in the Assessment Criteria in Appendix VI.
- No more than 1% of the overall fund can be exposed to underlying fund holdings in breach of these exclusions at any one time.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").

abrdn MyFolio Enhanced ESG Index II Fund for the six months ended 31 December 2025 (continued)

- Derivatives include instruments used to express tactical asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.
- Derivatives are exempt from the Assessment Criteria.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Enhanced ESG Index range, which offers five funds with different expected combinations of investment risk and return that adhere to the abrdn MyFolio Enhanced ESG assessment criteria. The fund is risk level III, which aims to be the middle risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 45–75% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- The fund may invest up to 20% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 25% of the fund's assets will be the ones traditionally viewed as lower risk, such as cash, money-market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including REITs), high yield corporate bonds (loans to a company) and emerging market bonds (loans to an emerging market government).
- At least 70% of the fund's portfolio will have sustainability characteristics, which means the fund will invest at least 70% in funds which have explicit sustainability related targets such as improved environmental, social and/or governance (ESG) outcomes or positive sustainability related contributions assessed in accordance with the abrdn MyFolio Enhanced ESG assessment criteria ("Assessment Criteria") which can be found in Appendix VI to this prospectus.
- The fund may also invest in funds that apply ESG or sustainability criteria but do not set any specific sustainability related targets, or funds which have no specific ESG or sustainability criteria within their investment objective or process. These investments are used to provide diversification and deliver growth and may include funds applying only screening criteria, investments which are used for cash management purposes or assets that do not have any explicit sustainable characteristics, such as global government bonds (loans to a government).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives and policy.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- The management team will analyse the underlying funds and their investments to assess the extent to which they align with the Assessment Criteria. Further to this, the management team will meet with the fund managers to discuss the underlying fund's philosophy.
- The management team will only invest in funds that have a firm level active engagement and voting policy.
- Additionally, the management team assess all underlying funds against a set of exclusions relative to the respective asset class. For companies, these are related to the UN Global Compact, Controversial Weapons, Tobacco Production and Thermal Coal whilst for government bonds, these are related to UN sanctions. More details around the screens can be found in the Assessment Criteria in Appendix VI.
- No more than 1% of the overall fund can be exposed to underlying fund holdings in breach of these exclusions at any one time.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").

abrdn MyFolio Enhanced ESG Index III Fund for the six months ended 31 December 2025 (continued)

- Derivatives include instruments used to express tactical asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.
- Derivatives are exempt from the Assessment Criteria.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Enhanced ESG Index III Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Comparative Tables

Institutional B Fixed Accumulation	31 December 2025	30 June 2025	30 June 2024	30 June 2023

abrdn MyFolio Enhanced ESG Index IV Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Enhanced ESG Index range, which offers five funds with different expected combinations of investment risk and return that adhere to the abrdn MyFolio Enhanced ESG assessment criteria. The fund is risk level IV, which aims to be the second highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 60-90% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- The fund may invest up to 20% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 60% of the fund will be invested in assets traditionally viewed as being higher risk such as equities (company shares), and emerging market bonds (loans to an emerging market government).
- The rest of the fund will be invested in a selection of other assets such as money-market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- At least 70% of the fund's portfolio will have sustainability characteristics, which means the fund will invest at least 70% in funds which have explicit sustainability related targets such as improved environmental, social and/or governance (ESG) outcomes or positive sustainability related contributions assessed in accordance with the abrdn MyFolio Enhanced ESG assessment criteria ("Assessment Criteria") which can be found in Appendix VI to this prospectus.
- The fund may also invest in funds that apply ESG or sustainability criteria but do not set any specific sustainability related targets, or funds which have no specific ESG or sustainability criteria within their investment objective or process. These investments are used to provide diversification and deliver growth and may include funds applying only screening criteria, investments which are used for cash management purposes or assets that do not have any explicit sustainable characteristics, such as global government bonds (loans to a government).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives and policy.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- The management team will analyse the underlying funds and their investments to assess the extent to which they align with the Assessment Criteria. Further to this, the management team will meet with the fund managers to discuss the underlying fund's philosophy.
- The management team will only invest in funds that have a firm level active engagement and voting policy.
- Additionally, the management team assess all underlying funds against a set of exclusions relative to the respective asset class. For companies, these are related to the UN Global Compact, Controversial Weapons, Tobacco Production and Thermal Coal whilst for government bonds, these are related to UN sanctions. More details around the screens can be found in the Assessment Criteria in Appendix VI.
- No more than 1% of the overall fund can be exposed to underlying fund holdings in breach of these exclusions at any one time.
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express tactical asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.

abrdn MyFolio Enhanced ESG Index IV Fund for the six months ended 31 December 2025 (continued)

- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.
- Derivatives are exempt from the Assessment Criteria.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

abrdrn MyFolio Enhanced ESG Index V Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdrn MyFolio Enhanced ESG Index range, which offers five funds with different expected combinations of investment risk and return that adhere to the abrdrn MyFolio Enhanced ESG assessment criteria. The fund is risk level V, which aims to be the highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 70–110% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- The fund may invest up to 20% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 80% of the fund will be invested in assets traditionally viewed as being higher risk such as equities (company shares), and emerging market bonds (loans to an emerging market government).
- The rest of the fund will be invested in a selection of other assets such as money-market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- At least 70% of the fund's portfolio will have sustainability characteristics, which means the fund will invest at least 70% in funds which have explicit sustainability related targets such as improved environmental, social and/or governance (ESG) outcomes or positive sustainability related considerations assessed in accordance with the abrdrn MyFolio Enhanced ESG assessment criteria ("Assessment Criteria") which can be found in Appendix VI to the prospectus.
- The fund may also invest in funds that apply ESG or sustainability criteria but do not set any specific sustainability related targets, or funds which have no specific ESG or sustainability criteria within their investment objective or process. These investments are used to provide diversification and deliver growth and may include funds applying only screening criteria, investments which are used for cash management purposes or assets that do not have any explicit sustainable characteristics, such as global government bonds (loans to a government).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives and policy.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- The management team will analyse the underlying funds and their investments to assess the extent to which they align with the Assessment Criteria. Further to this, the management team will meet with the fund managers to discuss the underlying fund's philosophy.
- The management team will only invest in funds that have a firm level active engagement and voting policy.
- Additionally, the management team assess all underlying funds against a set of exclusions relative to the respective asset class. For companies, these are related to the UN Global Compact, Controversial Weapons, Tobacco Production and Thermal Coal whilst for government bonds, these are related to UN sanctions. More details around the screens can be found in the Assessment Criteria in Appendix VI of the prospectus.
- No more than 1% of the overall fund can be exposed to underlying fund holdings in breach of these exclusions at any one time.
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express tactical asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.

abrdn MyFolio Enhanced ESG Index V Fund for the six months ended 31 December 2025 (continued)

- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.
- Derivatives are exempt from the Assessment Criteria.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Enhanced ESG Index V Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Comparative Tables

Institutional B Fixed Accumulation	31 December 2025	30 June 2025	30 June 2024	30 June 2023

abrdn MyFolio Index I Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Index range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level I, which aims to be the lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 20-40% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 20% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 50% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdrn MyFolio Index I Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk			Typically higher rewards, higher risk			
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 3 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Group 2	-	0.2898	0.2898	0.2212

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Index II Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Index range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level II, which aims to be the second lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 35-55% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 20% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 40% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Index II Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator. The risk and reward indicator changed from 3 to 4 on 13 March 2025.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Group 2	-	0.1675	0.1675	0.1327

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Index III Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Index range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level III, which aims to be the middle risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 45-75% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 20% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 25% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- Please note that the number contained in the fund name is not related to the SRRl contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Index III Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Institutional S Fixed Accumulation				
Group 1	0.1971	-	0.1971	0.1436
Group 2	0.0108	0.1863	0.1971	0.1436
Retail Fixed Accumulation				
Group 1	0.1142	-	0.1142	0.0704
Group 2	-	0.1142	0.1142	0.0704

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Index IV Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Index range, which offers five funds with different expected combinations of investment risk and return. This fund is risk level IV, which aims to be the second highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 60–90% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 20% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 60% of the fund will be invested in assets traditionally viewed as being higher risk such as equities (company shares), and emerging market bonds (loans to an emerging market government).
- The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- Please note that the number contained in the fund name is not related to the SRRI contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Index IV Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator. The risk and reward indicator changed from 5 to 4 on 9 September 2025.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Closing net asset value (£'000)	663,856	67	58	19
Closing number of shares	811,595,693	90,294	82,940	30,845
Closing net asset value per share (pence)	81.80	73.86	69.47	61.16
Change in net asset value per share	10.75%	6.32%	13.59%	6.46%
Operating charges	0.65%	0.65%	0.65%	0.65%

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A Platform P Fixed Accumulation share class was closed on 20 November 2024.

Retail Fixed Accumulation				
Group 1	0.0425	-	0.0425	0.0172
Group 2	-	0.0425	0.0425	0.0172

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Index V Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Index range, which offers five funds with different expected combinations of investment risk and return. This fund is risk level IV, which aims to be the second highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 70-110% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 80% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 20% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 80% of the fund will be invested in assets traditionally viewed as being higher risk such as equities (company shares), and emerging market bonds (loans to an emerging market government).
- The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- The fund will not take any tactical asset allocation positions (changing short term proportions in each fund).
- Please note that the number contained in the fund name is not related to the SRRI contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Index V Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator. The risk and reward indicator changed from 4 to 5 on 13 March 2025.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Retail Fixed Accumulation				
Group 1	-	-	-	-
Group 2	-	-	-	-

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Multi-Manager I Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Multi-Manager range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level I, which aims to be the lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 20-40% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in actively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 40% in passively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 50% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), commercial property and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Multi-Manager I Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator. The risk and reward indicator changed from 4 to 3 on 9 September 2025.

Typically lower rewards, lower risk			Typically higher rewards, higher risk			
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 3 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

abrdn MyFolio Multi-Manager I Fund for the six months ended 31 December 2025 (continued)

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Multi-Manager II Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Multi-Manager range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level II, which aims to be the second lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 35-55% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in actively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 40% in passively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 40% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), commercial property and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRRI contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Multi-Manager II Fund for the six months ended 31 December 2025

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

abrdn MyFolio Multi-Manager II Fund for the six months ended 31 December 2025 (continued)

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A Institutional S Accumulation share class was launched on 14 April 2025.

^B Platform 1 Accumulation share class was closed on 20 November 2024.

^C Z Accumulation share class was closed on 15 April 2025.

abrdn MyFolio Multi-Manager III Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Multi-Manager range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level III, which aims to be the middle risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 45-75% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in actively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 40% in passively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 25% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), commercial property and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Multi-Manager III Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator. The risk and reward indicator changed from 5 to 4 on 9 September 2025.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

abrdn MyFolio Multi-Manager III Fund for the six months ended 31 December 2025 (continued)

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

abrdn MyFolio Multi-Manager IV Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Multi-Manager range, which offers five funds with different expected combinations of investment risk and return. This fund is risk level IV, which aims to be the second highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 60-90% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in actively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 40% in passively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 60% of the fund will be invested in assets traditionally viewed as being higher risk such as such as equities (company shares), commercial property, alternative funds and emerging market bonds (loans to an emerging market government).
- The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company) and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRRI contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Multi-Manager IV Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator. The risk and reward indicator changed from 5 to 4 on 9 September 2025.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

abrdn MyFolio Multi-Manager V Fund for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Multi-Manager range, which offers five funds with different expected combinations of investment risk and return. This fund is risk level V, which aims to be the highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 70-110% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in actively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 40% in passively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 80% of the fund will be invested in assets traditionally viewed as being higher risk such as such as equities (company shares), commercial property, alternative funds and emerging market bonds (loans to an emerging market government).
- The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company) and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRRI contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Multi-Manager V Fund for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 31 December 2025.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The use of derivatives carries the risk of reduced liquidity, substantial loss an increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn Dynamic Multi Asset Growth Fund (closed) for the six months ended 31 December 2025

abrdn Dynamic Multi Asset Growth Fund is no longer open to investors, having redeemed all shares on 23 May 2023. It is the intention of the ACD to terminate the fund at a later date once the residual assets and liabilities are settled. As a result the financial statements for this fund have not been prepared on a going concern basis. At the time of the share cancellation, all realisable securities were sold. Some securities which were not immediately realisable due to a trading suspension, or due to being delisted, continue to be held at the current balance sheet date. Should an opportunity to sell these securities for value arise, they will be sold, otherwise Aberdeen will, in conjunction with the Depositary, pursue any possible residual value from such securities until all such opportunities have been reasonably exhausted.

abrdn MyFolio Market I Fund (closed) for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Market range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level I, which aims to be the lowest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 20-40% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 40% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 50% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), commercial property and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Market I Fund (closed) for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 11 July 2025.

The fund is rated as 4 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

abrdn MyFolio Market I Fund (closed) for the six months ended 31 December 2025 (continued)

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Change in net asset value per share	-%	6.00%	7.41%	0.45%
Operating charges	-%	0.13%	0.14%	0.15%

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A The fund closed on 11 July 2025.

- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

abrdn MyFolio Market II Fund (closed) for the six months ended 31 December 2025 (continued)

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

ZC Accumulation			
Group 1	0.8131	-	0.8131
Group 2	0.0147	0.7984	0.8131

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Market III Fund (closed) for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Market range, which offers five funds with different expected combinations of investment risk and return. The fund is risk level III, which aims to be the middle risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 45-75% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 40% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 25% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), commercial property and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRR1 contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Market III Fund (closed) for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 11 July 2025.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The fund may hold money-market instruments, the value of which may be subject to adverse movements in extreme market conditions.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

abrdn MyFolio Market IV Fund (closed) for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Market range, which offers five funds with different expected combinations of investment risk and return. This fund is risk level IV, which aims to be the second highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 60-90% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 40% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 60% of the fund will be invested in assets traditionally viewed as being higher risk such as such as equities (company shares), commercial property and emerging market bonds (loans to an emerging market government).
- The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company) and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRRI contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 11 July 2025.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Emerging markets are countries generally considered to be relatively less developed or industrialized, and investments in emerging markets countries are subject to a magnification of the risks that apply to foreign investments. These risks are greater for securities of companies in emerging market countries because the countries may have less stable governments, more volatile currencies and less established markets.
- Commercial property is less liquid than other asset classes such as bonds or equities. Selling property can be a lengthy process so investors in the fund should be aware that they may not be able to sell their investment when they want to.
- Commercial property transaction charges are higher than those which apply in other asset classes. Investors should be aware that a high volume of transactions would have a material impact on fund returns.
- Property valuation is a matter of judgment by an independent valuer and is therefore a matter of the valuer's opinion rather than fact.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- The fund employs a single swinging pricing methodology to protect against the dilution impact of transaction costs. Due to the high transaction charges associated with the fund's assets, a change in the pricing basis will result in a significant movement in the fund's published price.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Change in net asset value per share	-%	7.40%	13.24%	5.45%
Operating charges	-%	0.15%	0.18%	0.19%

The closing net asset value (£'000) divided by the closing number of shares may not calculate to the closing net asset value per share (pence) due to rounding differences. The published closing net asset value per share (pence) is based on unrounded values and represents the actual price.

The change in the net asset value per share is the change from the beginning of the period to the close of the period.

Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

^A The fund closed on 11 July 2025.

Distribution Table for the six months ended 31 December 2025 (in pence per share)

Special distribution

Group 1 – shares purchased prior to 1 July 2025

Group 2 – shares purchased between 1 July 2025 and 10 July 2025

	Revenue	Equalisation	Distribution paid 11/11/25
Institutional Accumulation			
Group 1	1.4542	-	1.4542
Group 2	-	1.4542	1.4542
Retail Accumulation			
Group 1	1.3379	-	1.3379
Group 2	-	1.3379	1.3379
ZC Accumulation			
Group 1	1.2784	-	1.2784
Group 2	0.0027	1.2757	1.2784

Equalisation

This applies only to shares purchased during the distribution period (group 2 shares). It is the average amount of revenue included in the purchase price of group 2 shares and is refunded to the holders of these shares as a return of capital. Being capital it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

abrdn MyFolio Market V Fund (closed) for the six months ended 31 December 2025

Investment Objective

To generate growth over the long term (5 years or more) while being managed to a defined level of risk. The fund is part of the abrdn MyFolio Market range, which offers five funds with different expected combinations of investment risk and return. This fund is risk level V, which aims to be the highest risk fund in this range.

Risk Target: The defined level of risk referred to above that the management team is targeting is within the range of 70-110% of world stock markets (represented by the MSCI World Index), over 10 years. There is no certainty or promise that this target will be achieved. The Risk Target has been chosen as it represents a risk range which is appropriate for the fund.

Investment Policy

Portfolio Securities

- The fund will invest at least 60% in passively managed funds, including those managed by Aberdeen Investments, to obtain broad exposure to a range of diversified investments.
- It may invest up to 40% in actively managed funds (including those managed by Aberdeen Investments).
- Typically, at least 80% of the fund will be invested in assets traditionally viewed as being higher risk such as such as equities (company shares), commercial property and emerging market bonds (loans to an emerging market government).
- The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company) and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRRI contained in the Key Investor Information document (NURS-KII).

Derivatives and Techniques

- The fund will routinely use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as "Efficient Portfolio Management").
- Derivatives include instruments used to express asset allocations reflecting expected changes in interest rates, companies share prices, inflation, currencies or creditworthiness of corporations or governments.
- The fund may also invest in other funds which may use derivatives extensively although these investments shall be in line with fund's overall risk profile.

Investment Activity

The Investment Activity for each fund is documented as a whole on pages 6 to 10.

abrdn MyFolio Market V Fund (closed) for the six months ended 31 December 2025 (continued)

Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The table below shows the fund's ranking on the Risk and Reward Indicator.

Typically lower rewards, lower risk				Typically higher rewards, higher risk		
1	2	3	4	5	6	7

Risk and reward indicator table as at 11 July 2025.

The fund is rated as 5 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in equity and equity related securities. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.
- Emerging markets are countries generally considered to be relatively less developed or industrialized, and investments in emerging markets countries are subject to a magnification of the risks that apply to foreign investments. These risks are greater for securities of companies in emerging market countries because the countries may have less stable governments, more volatile currencies and less established markets.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Further Information

Constitution

abrdn OEIC III was incorporated on 14 July 2010, under the FCA Regulations. The Company is an open-ended investment company (OEIC) with variable capital under regulation 14 (authorisation) of the OEIC Regulations.

Consumers' rights and protections, including any derived from EU legislation, are currently unaffected by the result of the UK referendum to leave the European Union and will remain unchanged unless and until the UK Government changes the applicable legislation.

Documentation and Prices

Copies of the current Prospectus and Key Investor Information Documents (KIIDs) for the abrdn OEIC III, daily prices, together with the latest Annual (and if issued later the interim) Report and Accounts for any fund, are available to download at www.aberdeeninvestments.com. A paper copy of the Report and Accounts is available on request from the ACD.

Notices/Correspondence

Please send any notices to abrdn Fund Managers Limited, PO Box 12233, Chelmsford, CM99 2EE. Any notice to the ACD will only be effective when actually received by the ACD. All notices will be sent to the investor at the address set out in the Application form or the latest address which the investor has notified to the ACD, and will be deemed to have been received three days after posting. Events detailed in these terms and conditions will be carried out on the dates specified, unless the dates are a non-business day, when they will be carried out on the next business day.

Complaints and Compensation

If you need to complain about any aspect of our service, you should write to the Complaints Team, Aberdeen, PO Box 12233, Chelmsford CM99 2EE, who will initiate our formal complaints procedure. If you prefer, you may call the Complaints Team on 0345 113 6966 or email complaints@aberdeenplc.com in the first instance.

Alternatively if you have a complaint about the Company or funds you can contact the Depositary directly. A leaflet detailing our complaints procedure is available on request. We will endeavour to respond to your complaint as soon as possible and will notify you of our outcome within 8 weeks. If the complaint is not resolved by us to your satisfaction then you may have the right to take your complaint to the Financial Ombudsman Service (FOS). To contact the FOS Service you should write to The Financial Ombudsman Service, Exchange Tower, London, E14 9SR, email complaint.info@financial-ombudsman.org.uk or telephone 0800 023 4567 (free for landlines and mobiles) or 0300 123 9123 (calls cost no more than calls to 01 and 02 numbers) or +44 20 7964 0500 (available from outside the UK - calls will be charged).

We are covered by the Financial Services Compensation Scheme, which means if we become insolvent, you may be entitled to compensation. The level of compensation will depend on the type of business and the circumstances of your claim. Investments are covered up to £85,000 for claims against firms that fail on or after 1 April 2019. Details are available from the FSCS Helpline on 0800 678 1100 or 020 7741 4100 and on the FSCS website: www.fscs.org.uk.
