Quarterly Range Report

MyFolio Index Range - Q3 2026

Institutional B Fixed Accumulation

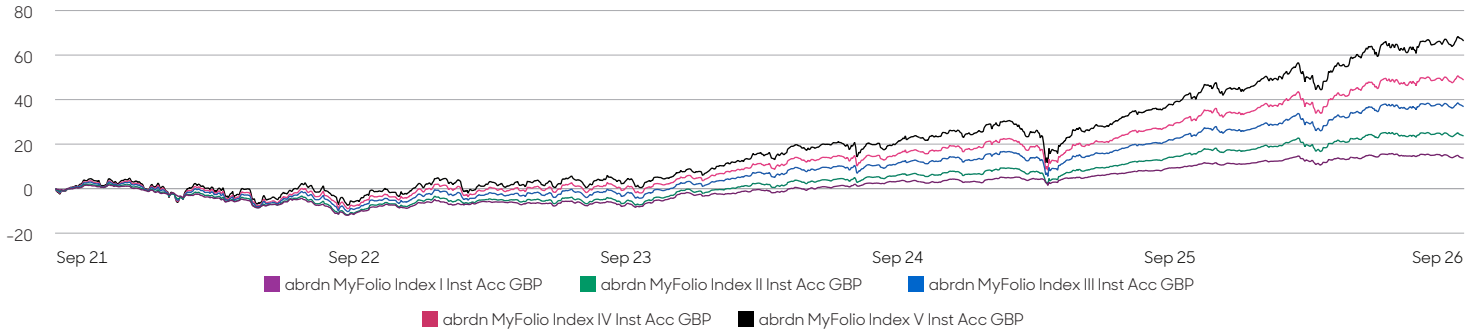

Ratings

MyFolio Index

MyFolio is a flexible investment solution, offering ranges of multi-asset fund-of-funds that incorporate carefully chosen active and/or passive investment funds. For each range, there are five individual funds that target a different level of risk.

Please note that the number contained in a MyFolio fund name is not related to the synthetic risk and reward indicator contained in the Key Investor Information Document (KIID).

Cumulative performance %

	I %	II %	III %	IV %	V %
1 Month	-1.35	-0.98	-0.82	-0.55	0.09

Past performance is not a guide to future returns. The value of this investment and the income from it may go down as well as up and cannot be guaranteed. An investor may receive back less than their original investment.

For comparison purposes, investors can compare the fund's long term performance to a basket of assets (before charges) with a risk profile at the lower range of the Risk Target for the relevant fund, which the ACD considers appropriate given the investment policy and Risk Target of the relevant fund.

Source: Aberdeen, as at 30 Septemebr 2026. Calculation basis: Sterling, total return, net income reinvested, net of fees.

This document is intended for use by individuals who are familiar with investment terminology. To help you understand a fund and for a full explanation of specific risks and the overall risk profile of the fund and the shareclasses within it, please refer to the Key Investor Information Document or Prospectus.

Market Review

Global equities posted positive returns in sterling and US dollar terms in the third quarter of 2026, although performance varied considerably across regions. Resilient corporate earnings and continued investment in artificial intelligence supported sentiment, while concerns over major technology companies' heavy capital spending and elevated valuations periodically caused volatility. Renewed US–Iran hostilities, including disruption to shipping through the Strait of Hormuz and attacks on Saudi energy infrastructure, kept oil markets volatile, pushing Brent crude oil prices above US$100 per barrel in September. Higher energy costs reinforced inflation concerns and lifted government bond yields. Relatively benign US inflation data provided support earlier in the quarter, but the US Federal Reserve (Fed) raised interest rates in September and indicated that another increase could follow before year end, tempering investor risk appetite and limiting overall gains.

In fixed income markets, global government bonds declined in sterling and local-currency terms over the quarter. Ten-year government bond yields rose in the US, the UK, Germany and Japan as energy-driven inflation concerns and resilient economic activity reinforced expectations that interest rates would remain higher for longer. Fiscal sustainability concerns and heavy bond issuance also added upward pressure in some markets. However, Chinese 10-year government bond yields declined amid weaker domestic growth and expectations of policy support. The Fed raised the target range for the federal funds rate by 25 basis points (bps) to 3.75%–4.00% in September and indicated that another increase could follow before year end. The European Central Bank also raised its deposit facility rate by 25 bps to 2.50%, amid persistent energy-related inflation pressures. By contrast, the Bank of England kept the Bank Rate unchanged at 3.75% throughout the quarter. Meanwhile, the Bank of Japan raised its short-term policy rate by 25 bps to 1.25%, continuing its gradual policy normalisation.

UK commercial real estate returned 1.2% over the three months to the end of August (the latest data available), according to the MSCI UK Monthly Index. The retail sector (2.1%) was the strongest performer, while the residential sector (0.3%) was the weakest.

Range commentary

The fundamental focus of the Strategic Asset Allocation (SAA) for MyFolio is to continually enhance diversification across asset classes and maximise the potential return for each level of risk. We do this in a way that is consistent with our long-term expected returns.

Any enhancements made to the SAA must be compared with the alternative of making no change at all. Turnover must be considered carefully, and there must be a clear potential benefit from any changes we plan to make. Historically, we have made, on average, about one change every 12 months, but the frequency has increased more recently given the rapidly changing market dynamics.

There were no changes to the Fund's SAA over the period.

In terms of the underlying funds, there were no significant trades over the last three months.

Market Outlook

Global equities remain supported by resilient corporate earnings, despite a more challenging backdrop. Technology stocks may stay volatile amid elevated valuations and heavy investment in artificial intelligence, while rising government bond yields are a headwind. Renewed US–Iran tensions, including disruption to shipping through the Strait of Hormuz, have kept oil prices elevated. Further escalation could intensify inflation pressures and prompt tighter monetary policy.

The US Federal Reserve raised the target range for the federal funds rate by 0.25% to 3.75%–4.00% at its September meeting, responding to persistent inflation pressures reinforced by higher energy prices. Policymakers retained a data-dependent stance, while market pricing continued to imply scope for a further increase by the end of 2026.

The European Central Bank raised its deposit facility rate from 2.25% to 2.50% at its September meeting, while retaining a data-dependent stance as policymakers responded to intensifying inflation pressures from higher energy prices against an uncertain growth outlook.

In the UK, the Bank of England kept the Bank Rate at 3.75% at its September meeting, with Middle East-driven energy risks complicating the outlook for inflation and growth.

Despite continued uncertainty, global real estate is on a firmer footing, supported by improving fundamentals and recovering liquidity. However, elevated financing costs remain a constraint, and the recovery is uneven across regions, sectors and individual properties. Infrastructure continues to be an attractive investment opportunity, combining defensive characteristics with long-term structural growth drivers.

*The Ongoing Charge Figure (OCF) shows the annualised operating expenses of the share/unit class as a percentage of the average net asset value of the class over the same period. It is made up of the Annual Management Charge (AMC) and other expenses taken from the class over the last annual reporting period, such as depositary fees, audit fees, investment management fees, and administration fees. It excludes portfolio transaction costs, except in the case of an entry/exit charge paid by the Fund when buying or selling in another collective investment undertaking. The OCF can help you compare the costs and expenses of different Funds/classes.

[1]The Historic Yield as at 31/08/2026 reflects distributions declared over the past twelve months as a percentage of the mid-market share price, as at the date shown. It does not include any preliminary charge and investors may be subject to tax on their distributions.
