

This is a marketing communication. Please refer to the prospectus and supplement and see the Key Information Document (KID) for details before making any final investment decisions. The decision to invest in the Fund should take into account all of its characteristics and objectives as described in the prospectus and other fund documentation.

The Global Private Markets Fund was launched on 15 January 2018 and is a sub-fund of abrdn IICAV, an umbrella fund with segregated liability between sub-funds.

Investment objective

The Fund aims to generate growth over the long term by investing in a diversified portfolio of private market assets. The Fund is actively managed and is not managed in reference to any benchmark index.

Fund Risks

Investors should be aware that there are risks inherent in all investments and there can be no guarantee against loss resulting from investments in the Fund.

The three key risk factors are described below:

- **Liquidity Risk**

Private market assets are inherently illiquid. Selling private market assets can be a lengthy process, and the price at which assets can be sold may be uncertain. Consequently, investors in the relevant Fund should be aware that they may not be able to sell their investment when they want to, and the Fund's performance may be adversely affected by the sale of assets to meet redemption demands. Redemption requests may from time to time be satisfied by the sale of more liquid assets which could adversely affect the liquidity profile of a Fund to the detriment of remaining investors.

- **Suspension Risk**

In exceptional circumstance, the Directors of the Fund with the approval of the Depositary may temporarily suspend the issue, valuation, sale, purchase, redemption or conversion of shares in the Fund.

- **Private Markets Risk**

Private market assets have certain characteristics which have associated risks. Because assets do not trade on public markets, valuation and pricing may be difficult to determine. Assets may be long-term projects which have development risk and uncertainty regarding their financial viability and overall the risk of default, bankruptcy or dilution of the value of a Fund's holding in individual assets is higher than for public market assets.

Investment strategy

Designed as a one-stop solution, the Fund offers long-term growth potential through a diversified portfolio of private market assets – spanning Private Equity, Private Credit, Infrastructure, Real Estate, and Natural Resources. With exposure to over 3,000 private assets and projects, the Fund combines private capital and real assets to deliver growth, income, and inflation protection – bringing greater resilience to traditional portfolios.

The Fund aims to be fully diversified across asset classes, strategies, sectors, and geographies, and leverages both Aberdeen's in-house expertise and a broad external network to source investment opportunities. Through primary fund commitments, secondaries, and direct/co-investments, the Fund provides institutional-quality access to private markets while maintaining quarterly liquidity – making it an accessible and effective way for investors to diversify beyond traditional asset classes and build their private markets allocation.

Risk and reward profile

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

Lower risk, Higher risk,
Typically lower rewards Typically higher rewards

We have classified this product as 6 out of 7, which is the second-highest risk class. This rates the potential losses from future performance at a high level, and poor market conditions are very likely to impact our capacity to pay you. The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you sell it at an earlier stage. The value of investments and the income from them can go down as well as up, and you may get back less than you invested. This product does not include any protection from future market performance so you could lose some or all of your investment. Further information on risks are detailed in the Fund's Annual Report available on request. Complete information on the risks of the Fund is available in the Prospectus and the Key Information Document (KID), which can be obtained free of charge at aberdeeninvestments.com or on request.
