

Investment objective

To achieve long-term capital appreciation by investing in companies which are incorporated in India or which derive significant revenue or profit from India, with dividend yield from the company being of secondary importance.

Benchmark

The Company compares its performance to the MSCI India Index (sterling adjusted). However, the Company's portfolio is constructed without reference to the composition of any stock market index or benchmark. It is likely, therefore, that there will be periods when its performance may vary significantly from the benchmark.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. For more detailed information about Morningstar's Analyst Rating, including its methodology, please go to: <http://corporate.morningstar.com/us/documents/MethodologyDocuments/AnalystRatingforFundsMethodology.pdf>. The Morningstar Analyst Rating for Funds is a forward-looking analysis of a fund. Morningstar has identified five key areas crucial to predicting the future success of a fund: People, Parent, Process, Performance, and Price. The pillars are used in determining the Morningstar Analyst Rating for a fund. Morningstar Analyst Ratings are assigned on a five-tier scale running from Gold to Negative. The top three ratings, Gold, Silver, and Bronze, all indicate that our analysts think highly of a fund; the difference between them corresponds to differences in the level of analyst conviction in a fund's ability to outperform its benchmark and peers through time, within the context of the level of risk taken over the long term. Neutral represents funds in which our analysts don't have a strong positive or negative conviction over the long term and Negative represents funds that possess at least one flaw that our analysts believe is likely to significantly hamper future performance over the long term. Long term is defined as a full market cycle or at least five years. Past performance of a security may or may not be sustained in future and is no indication of future performance. For detailed information about the Morningstar Analyst Rating for Funds, please visit <http://global.morningstar.com/managerdisclosures>.

Fund managers' report

Market review

Indian equities rose in April, outperforming both global emerging market equities as well as the broader Asia Pacific ex Japan region. The MSCI India index was up 1.29% in sterling, with all sectors in the positive except for information technology, industrials, materials and utilities.

Market performance was driven by a confluence of factors, including US President Donald Trump's decision to temporarily pause the implementation of "reciprocal" tariffs on US trading partners, as well as a weaker US dollar and falling oil prices. On the domestic front, the Reserve Bank of India's second 25 basis points interest-rate cut and ongoing cash injections to address the liquidity deficit in the financial system also improved investor sentiment.

On the earnings front, about 32% of the companies in the MSCI India universe have thus far reported their fourth-quarter results for the fiscal year 2025.

Portfolio changes

We exited Bajaj Auto and Apar Industries to fund better opportunities elsewhere.

Outlook

We view the macroeconomic slowdown in India as temporary and cyclical in nature. We have seen the Reserve Bank of India start its rate cutting cycle in February and add liquidity to the market. While earnings growth slowed in the most recent report season, we expect India to continue generating comfortable double-digit earnings growth going into next year.

Fund managers' report continues overleaf

^C Expressed as a percentage of average daily net assets for the year ended 31 March 2024. The Ongoing Charges Figure (OCF) is the overall cost shown as a percentage of the value of the assets of the Company. It is made up of the Annual Management Fee and other charges. It does not include any costs associated with buying shares in the Company or the cost of buying and selling stocks within the Company. The OCF can help you compare the annual operating expenses of different Companies.

^D The management fee is 0.80% per annum of net assets up to £300m and 0.60% per annum of net assets above £300m.

^E Calculated using the Company's historic net dividends and month end share price.

^F Net gearing is defined as a percentage, with net debt (total debt less cash/cash equivalents) divided by shareholders' funds.

^G The 'Active Share' percentage is a measure used to describe what proportion of the Company's holdings differ from the benchmark index holdings.

Fund managers' report – continued

In view of the global uncertainties brought on by the latest round of widespread tariffs from the US, we are cognisant of the risks India faces. While India should be able to safely navigate the tariffs through negotiations, a potential US recession could trigger a global slowdown while supply chain disruptions caused by the tariffs could see India get caught in the crossfires of an international trade war.

The long-term structural growth story remains intact. The consumer-focused financial year 2026 budget is expected to help with middle income consumption demand. There is also emphasis from the government for more public-private partnerships for infrastructure projects, while the 'Make in India' manufacturing focus continues with more money allocated to production-linked incentive schemes to encourage multinationals to set up production bases in the country.

From a stock picking perspective, we are still finding pockets of good growth and quality across various sectors and sub-sectors, even in this temporary market downturn. The Trust's downside is well-protected given our quality focus, and our defensive holdings are in a good position in case of profit-taking. Any correction in their share prices would be, in our view, a buying opportunity.

Summary of Current Key Commercial Arrangements

The Company has appointed abrdn Fund Managers Limited (aFML) as its alternative investment fund manager, to provide investment management, risk management, promotional activities and administration and company secretarial services to the Company.

The Company's portfolio is managed by abrdn Asia Limited (aAL) by way of a group delegation agreement in place between aML and aAL.

In addition, aFML has subdelegated administrative and secretarial services to abrdn Holdings Limited, promotional activities to abrdn Investments Limited and fund accounting services to BNP Paribas Fund Services UK Limited.

There is a rebate for any fees received in respect of any investments by the Company in investment vehicles managed by abrdn.

The Management Agreement is terminable by either party on not less than six months' notice. In the event of termination on less than the agreed notice period, compensation is payable to the Manager in lieu of the unexpired notice period.

The investment management fees are chargeable 100% to revenue.

No performance fee.

Director	30,000	29,000	3.4%
Number of Directors	4	5	

Important Information

The Statement of Operating Expenses is designed to help investors understand the impact of operating expenses on financial performance.

Operating expenses are NOT deducted from the value of an investor's shareholding, which is derived from the share price.

The market value (share price) of all publicly traded companies reflects a wide range of factors, including the estimated impact of operating expenses on future financial performance.

The market value of an investment trust may diverge materially, both positively and negatively, from the reported net asset value.

Important information

Risk factors you should consider prior to investing:

- The value of investments, and the income from them, can go down as well as up and investors may get back less than the amount invested.
- Past performance is not a guide to future results.
- Investment in the Company may not be appropriate for investors who plan to withdraw their money within 5 years.
- The Company may borrow to finance further investment (gearing). The use of gearing is likely to lead to volatility in the Net Asset Value (NAV) meaning that any movement in the value of the company's assets will result in a magnified movement in the NAV.
- The Company may accumulate investment positions which represent more than normal trading volumes which may make it difficult to realise investments and may lead to volatility in the market price of the Company's shares.
- The Company may charge expenses to capital which may erode the capital value of the investment.
- Movements in exchange rates will impact on both the level of income received and the capital value of your investment.
- There is no guarantee that the market price of the Company's shares will fully reflect their underlying Net Asset Value.
- As with all stock exchange investments the value of the Company's shares purchased will immediately fall by the difference between the buying and selling prices, the bid-offer spread. If trading volumes fall, the bid-offer spread can widen.
- The Company invests in emerging markets which tend to be more volatile than mature markets and the value of your investment could move sharply up or down.
- Yields are estimated figures and may fluctuate, there are no guarantees that future dividends will match or exceed historic dividends and certain investors may be subject to further tax on dividends.
